1639. Netnews Attributions

Newsgroup: rec.radio.amateur.policy
Date: 2001-08-26 19:52:59 UTC
From: CAM <Cecil.A.Moore@IEEE.org>
Message-ID: <3B89539B.E90D411A@IEEE.org>
Source record: 17881

Here is the netnews standard for attributions. Poster1 wrote
Posting1, Poster2 wrote Posting2, etc.

Poster1 wrote:

> Poster2 wrote:

> > Poster3 wrote:

> > > Poster4 wrote:

> Posting1

> > Posting2

> > > Posting3

> > > > Posting4

These postings are said to be nested and there is a unique nesting
level for each posting which corresponds to the poster. If we
abandon this standard, nobody will know who said what in postings
with several nesting levels. Postings should be attributed to the
person who does the posting, not to someone else. Any newsreader
that doesn't follow this standard should be manually edited for
correct attributions before posting.

This is a reply to my previous posting. Note that the attributions
are all still correct even though one level of nesting has been
added.

"Logbook of the World" Software Design Under Way

NEWINGTON, CT, Aug 2, 2001--Fast on the heels of approval of the "Logbook of the World" by the ARRL Board of Directors, software design to support the electronic contact-verification program is continuing apace. ARRL Membership Services Manager and LOTW Project Manager Wayne Mills, N7NG, said the ARRL hopes to make LOTW software modules available soon to vendors for incorporation into their logging programs.

>attributions? I have told you about it something like 15 times
>and have given at least three examples.

And I have told you at least 15 times that >>I<< am not doing anything wrong. This is the SAME NG reader I have been using (along with Deja) and up until you started getting called on your contradictions over what YOU have said, it was never an issue.

Also, YOU have been told by others that thre is nothing wrong and no one has "misattributed" what was being said to anyone.

>You choose to ignore
>any attempt to educate you in the netnews attribution standards.

You choose to refuse to produce those standards. References, Cecil...REFERENCES...You know what "references" are, don't you?

>Why don't you just follow Ed's lead?

Because nothing is wrong. No one has misunderstood a single thing I have said, nor have they had a problem determining whom I was addressing or whom I was quoting.

Try again.

>It's easy to figure out who said what when there are only two posters.
>But when there are half a dozen posters, your mixing up of the
>attributions will certainly lead to confusion

Because I don't get into these quotes of quotes of quotes that some people do. And when there is more than two persons in the exchange, I always put thier ID in parens, ie:

(W6RCA) blah blah blah blah

(K4YZ) blah blah blah blah

(N2EY) blah blah blah blah.

That way I don't get into these arguments.

>Why can't you just
>be a nice person and follow the netnews attribution standards?

Produce the "standards", Cecil.

>I had to change the above attributes to make them correct. You
>posted them wrong.

If YOU changed anything, then how do we know that YOU were not responsible for the original "error"...?!?!

I say there is none. So do others. I am not impressed or swayed by your "arguments".

>I certainly don't appreciate you messing
>with the postings that should be attributed to me.

None of them were.

>If you did
>that in a newspaper, it would be grounds for a lawsuit.

Newspapers have standards of ethical behaviour that are a matter of written record.

So far you ahve refused every request to produce the requested "standards".

Others here have stated that these "standards" are fluid. So far, YOU are the only one who claims otherwise.

Until you can provide me with the hard and pat "standards", you are simply spitting in the wind, Cecil.

Steve

>added.

Now, Cecil, provide the STANDARD by which these "attributions" are
determined.

That this is desireable is without argument. But a winning lottery ticket
in my wallet would be desireable right now, too, but it ain't there.

NO STANDARDS EXIST.

Not ONE written rule, regulation or law.

NO WHERE in any system I have used says "If you are posting to USENET, you
must (or are advised to...) use the following posting criteria..."

No standards = No violation.

It really is THAT simple.

Steve

This is NOT a "standard". It is your opinion. No references = No
standard. This is just "Because I said so..."

Your's is but one way to do it. It is neither "standard" nor is it
required.

And I don't gt into these "four deep" postings. It's neither accurate nor
is it productive.

Only by Dwight and he has changed his mind. Please tell us who
agrees with you.

> You choose to refuse to produce those standards. References,
> Cecil...REFERENCES...You know what "references" are, don't you?

As far as I know, it is a de facto standard, a gentleman's agreement.
Are you a gentleman, Steve? Do you run PACTOR in the lower 25kHz?

> >Why don't you just follow Ed's lead?
>
> Because nothing is wrong.

I have explained what is wrong. You have chosen to ignore the attribute
standards for netnews. I don't care if you muck with the postings of
others but please cease and desist from mucking with mine. Changing the
attributes is serious business, Steve, and I, for one, don't appreciate
it.

>Not a Bad Idea, but we need to get all the Hams to take a REAL TEST FIRST

Well, Bruce, you have been licenced for more than 20 years, so let's give you a real test question:

Q: In the far field of an antenna in free space, if the electric field is a 2 V/m at a distance of 100 meters, what will the electric field be at a distance of 200 meters?

A. 0.25 V/m
B. 0.5 V/m
C. 1.0 V/m
D 2.0 V/m

That's nonsense, Bruce. I am sure there are a few highly technical people taking today's exams, but most are doing just what you and I did -- passing their exams with a combination of learning, memorizing, lucky guessing and just plain hoping a few subjects don't show up on the exam they are given.

Steve:

The method of Usenet attribution is something similar to "good operational practice" on the air as a licensed ham. It just makes sense, and when followed, benefits us all. What problem could you possibly have with that?

Ed:

I see. Well, then, you cannot claim to have been licensed during the time when the ARS had it's most challenging and comprehensive licensing standards. However, since ham radio is what hams make of it, and hams are what they make of themselves, I'd say you've done quite well for yourself, in spite of the low licensing standards in place at the time you ascended "through the ranks."

Hams that have come along since April 15, 2000, seem to be sensitive to the fact of the licensing standards having been "dumbed down," and I can appreciate their concern. Perhaps it would have been better to leave well enough alone!

>do with amateur policy?

This newsgroup is the venue for discussion of amateur radio policy
issues, and the Morse Code testing requirements are a principal and
specifically on-topic issue here. In fact, this newsgroup was started
to get the controversial and sometimes heated code/no-code "debate"
off the newsgroup rec.radio.amateur.misc. As is done in many other
newsgroups, we occasionally delve into "off-topic" areas; but there
is more tolerance for that here than in other newsgroups. I've been
in this newsgroup for years, and it has always been thus, so the die
is cast, past practice is set, and that's the way it will be forever.
Thank you for your inquiry.

Good Housekeeping:

Some may have been, I can't say for sure. All I can say is that all the ham radio tests I took at the FCC Field Office in Baltimore were totally voluntary on my part. Nobody there locked me in the testing room, chained me to a desk, stuck a sharp #2 pencil in my hand, and threatened to keep me there indefinitely, without food, water, or bathroom breaks, until I took and passed all my tests! It just didn't happen -- there was absolutely no "force" used, whatsoever! I'm sorry to hear that conditions at your testing sessions were so harsh!

Bill:

A psychologist would say that you were trying to over-identify with
the masses, in order to secure personal popularity within your peer
group. I didn't "bash" anyone -- I merely spoke the truth. People
who have achieved more by meeting tougher qualifications have
earned and deserve higher status than those who don't. I don't
share your Communist philosophy that ham radio has to be all things
to all people, and that all hams are exactly, identically alike in their
standing among their peers. If you are too weak and immature in
your thinking to do or say anything that doesn't "go with the flow,"
at least acknowledge the right of others more courageous than
yourself to do so.

> of that state in 1860?

So you're saying because South Carolina fought the first battle with
Fort Sumter, and South Carolina had slaves, those two issues are
somehow linked - South Carolina attacked Fort Sumter because of
slavery? If that is true, how would a battle with Fort Sumter decide
the issue of slavery?

There you go with that sword thing again. Try working on your people skills, Long Jim. By the way, could you imagine someone saying that (work on your people skills) to a pirate years ago? I'm surprised someone hasn't worked that (modern job standards) into a pirate movie. It would be funny.

But aren't you wanted by the authorities in most ports? No wonder pirates had such a poor disposition - the authorities were interfering with the pirate's love life.

Ed:

If I were copying all of this stuff over-the-air, I wouldn't have any problem, would I? However, this is Usenet, with landline, fiber-optic, and satellite-based comms which are 100% accurate, thus leaving operator errors, such as typos, hanging out in the glare -- since they could have been found with a cursory proof-reading and corrected before hitting "Send." I do this 100 percent of the time; and I do it in order to show respect for my readers and to gain respect for the way I present my ideas.

I'm sure that you, Ed, with your self-serving political correctness in place, are much more tolerant of blatant, childish errors in spelling, grammar, punctuation, and capitalization since this isn't a formal, academic forum. To each his own; but as for me, I'll stick with writing in a manner which reflects a mature, intelligent, grown-up adult attitude toward how I am seen in print. The rest of you may as well head for a "chat room" and hang out with the kiddies!

I don't want to turn this into a discussion solely about my wife, so I'll just let that drop by saying that I would accept that if the facts supported it.

> Dwight, I *am* a northerner, living in

> in and "taken over."

Oh, I quite agree - things are changing. In fact, I think I even said so in an earlier message. My point is that we still have more room for that change. And I think attitudes is a good gauge of that change. But my concern is that I see those attitudes changing way too slowly. And many of those attitudes (both north and south) are not going to change until we address, and bury the hatchet (so to speak), on many of the issues that still linger from as far back as the civil war period.

> As to the comments about economy, I
> think that is just "the way it is." I
> can tell you for a fact that there's
> a lot more ignorance in the south than
> there is in the north. And, that is
> my personal experience.

But, my point is that everywhere else "ignorance" exists, the
government has made a massive effort to address it. But, in the south,
it is simply dismissed - that is just the way southerners are. Look at
the federal money being spent in California on Spanish language
education. Look at the amount of federal money being spent on inner
city schools in the larger northern cities. Where is the comparative
effort in the south? Why does this country consider ignorance
elsewhere an important issue to address, but the same thing in the
south just something to laugh about (back to my Beverly Hillbilles example).

> And, in the north I was quite rural;
> in the south I am quite urban
> (working right smack dab in the

> thereof?

It is reasonable to make comparisons between similar entities
(similar sized cities, towns, etc) in different regions. As for asking
why there should be any comparisons at all, I can only answer that
we're supposed to be one country (with equal opportunities, equal
treatment by the government, and with equal access to the privileges
of being an American). The only way to insure those equalities is to
make comparisons.

Actually, I would really rather see this "standard" changed, Cecil. Many of the newer newsreaders allow colors to be added to quoted text. But all of them ignore that first line exactly because there is nothing in front of it (Steve's messages look fine because he has added something in front of that line). Anyway, I suspect we'll see this "standard" slowly change as this color coded message structure catches on with all newsreaders.

Since it's an accepted standard, not a fixed rule, lets not use the
word "wrong," Cecil. That word is too negative for this situation.

This is a plain ASCII text newsgroup. Color will be difficult.

Larry, ham radio is not about status. If you think it is, then you really have missed the point of this outstanding hobby.

Notice this question went unanswered (not a single person responded). Far too many in this country today still believe that we are responsible for the ills of the past - that we should be held accountable for something that happened long before we were even born. In fact, it is exactly this mentality that drives the present civil rights movement (blacks should receive favorable treatment because their ancestors were mistreated and those are the people who did it). And, again, this is a very harmful way of thinking because it so easily justifies mistreatment of another group. For example, when applied to civil rights, it justifies black only colleges while the same is illegal for whites, black only political organizations while the same is illegal for whites, and widespread discrimination against whites by black owned businesses.

1688. Recruiting new hams, ideas?

Newsgroup: rec.radio.amateur.policy
Date: 2001-08-27 04:18:15 UTC
From: Robert Casey <wa2ise@ix.netcom.com>
Message-ID: <3B89CA06.4C8DA47C@ix.netcom.com>
Source record: 17932

So we haven't been swamped by hoards of new hams. So
what would you suggest?

Maybe a few well written ads in CB magizines? What, recruit
the unwashed!? Why not, some CBers may not be aware that
there's more to 2 way radio than 11 meters. DX HF not subject
to sunspot cycles. No legal restriction on how far.
Legal use of linears. More "barefoot" power. Around the world DX.
Contests (do CBers have contests?). Worked All States and other
such awards and/or goals. More different communications modes
SSB, AM, FM, various digital modes, satellites, repeaters.
Legal experimentation on rigs, antennas, name it.
Less sillyness and more orderlyness. Didn't like some hams you
met? Forget it, there's lots others you will like.
No business traffic to compete with.

I'm not talking about the truckers who just "use" the CB
radios for short range, or the ratchet jawers, and such.

Try setting up displays at malls and other places where non-hams tend to gather. Believe it or not there is a large number of the public that are not aware of ham radio. There are thousands of people that are using the FRS radios that would like to have a better system to keep in contact with each other. As one source try people that have FRS radios. We sell FRS radio where I work and I have brougt a few people into the hobby. I keep a supply of ARRL handouts to give to people. I also keep a supply of the ARRL Archie comic books for the kids. If each ham brought juse one new person into the hobby in one year we would double the number of people in the hobby.

There are thousands of test sessions, and only a handful a year are called into question. I think the VE system can hold its head high. All of the major VBCs have had their day in the unwanted spotlight. If memory serves, this time it is an ARRL session that is up for review.

Good ideas all.

I am not sure Amateur Radio could sustain that high of a growth rate. When the
No-Code Tech came along, there were more newcomers than willing
more-experienced hams to elmer them into the hobby. The result is that a lot
of these newcomers did not stay in ham radio.

I have never seen one single new ham here post how concerned he or she is about how dumbed down their tests were. I have seen you do so -- again and again and again and again and again and again -- literally ad nauseum. You do not appreciate their concern, Larry -- you are trying to create concern where none need exist.

>Perhaps it would have been better to leave well
>enough alone!

Perhaps it would have been better to leave things well enough alone. The FCC made its decision, though, didn't it. It it was better to leave things well enough alone then, perhaps it is still better to leave things well enough alone now. I see no value -- none whatsoever -- to Amateur Radio from the actions and words of those whose only intent is to sow discontent, distrust and bad feelings. You, my friend, are one of those people and you are, IMHO, causing harm to Amateur Radio and your fellows.

"Courageous" enough for you?

From: "Paul Friedman" paulfriedman@uswest.net

>As one of those ignorant newbies studying for his first ticket, can someone
>help me here? I thought it depended on the wavelength.

Hi, Paul,

First, that question will NOT appear on your exams, although in my opinion, it should appear on the Extra exams. (I am going to submit it to the QPC this week, methinks.)

The field strength from an antenna is not dependent on wavelength. Think in terms of a radiating source and a sphere. If 100 watts is put into the antenna, it must, by definition, be spread out on the interior surface of that sphere. If an antenna is a point source that radiates equally in all directions, the 100 watts will be spread out equally on the sphere. The power density, power/unit area, will not change with frequency.

What will change, however, is the coupling between two isotropic radiators at a given distance. (The Readers Digest version of the explanation is that the amount of energy captured by an antenna from a given field DOES vary with frequency.)

The formula for path loss is, if memory serves,

Pathloss=32.45+20log(D)+20log(F) where D is in kilometers and F is in MHz.

If you work all the math backwards, you could calculate that the path loss between two points increases by 6 dB every time distance or frequency is doubled. So, if you have a power density of 0.2 mw/cm^2 (200 microwatts of power is being absorbed by each square centimeter of that sphere) at 100 meters distance, you would have a power density 6 dB less (1/4 power) at 200 meters distance.

Now, all those hams who have not taken an exam before the FCC sit back and see if my hint above lets one of the old timers get the answer right. Bruce? Dick?

>toward how I am seen in print.

I agree that spelling and grammar can be helpful in communicating ideas, but I guess my ability to overlook them and get to the meat of the point being made is better than yours. If I am going to respond to a post, I prefer to respond to the content of the idea, not to relatively less-important ideas like spelling, grammar and typos. Clearly you disagree, but, as you say, to each his own.

The newsreader provides the color when viewing messages. For example, using the quote above as an example, the part you wrote would be blue and the part I wrote would be gray (those are my selected colors, other reader may vary). The only part that would not be colored is the "CAM wrote:" at the top because nothing appears in front of it. This color coding makes it very easy to separate various layers of quotes.

From what I have seen, Bruce will give you whatever answer he thinks will get your dander up.

Dick has, IMHO, paid his dues in the performance of public service, with years of being a VE and related work. Any calling into question what he has done for ham radio is out of line, IMHO. If you want to call into question some of the things he is doing to ham radio here, I would say that this is an appropriate place to do so, but trying to slap him with his past is not going to work.

BTW, I have not performed nearly enough public service in my years of being a ham. That is okay, though, because there are many, many ways to serve and I think I have found the one that suits me. The end result for ham radio has generally been positive.

> WRONG, thats what you did, thats not what I did. I knew the Info

I will accept that, Bruce, because I don't know what you knew and what you memorized. No one could know. The only thing that is known is that you and I both passed our tests and the FCC didn't think it needed to know how much I memorized and how much I learned. Same is true today.

I think everyone reading this had a different balance between learning, memorizing, lucky guess and hoping a few subjects didn't appear on their exams -- just like every ham who takes an exam today. But the premise I see from the doom and gloomers seems to imply that everyone who takes an exam today is entering ham radio not to learn anything and is word-associating over 1000 questions without any understanding. I believe that premise to be flawed.

>The method of Usenet attribution is something similar to "good
>operational practice" on the air as a licensed ham.

I agree. And those "practices" (on the air) are well documented and
published in numerous journals and textbooks.

Cecil has yet to produce anything except "Because I said so..." when
tasked with producing these other supposedly rigid "agreements". If they were
so critical, they would be "up front" in the NG readers.

They are not.

>What problem could you possibly have with that?

I don't. Larry, I have reposted and cited what you have sent me letter
for letter like I would one from Cecil.

Can you find ANY evidence that one word of anything YOU said or that I said
is in error?

Is there any question as to WHO is involved in the conversation?

In as much as both are "no", there has been no foul.

We are Amateurs. Clarity of communications are a hallmark of our service.
I have "faithfully" quoted and cited Cecil's posts.

If he make some issue out of an arrow that the newsreader is, for whatever
reason, not enetering, "oh well"...I have acted in good faith. I am sorry he
has to make an issue of it. It wasn't up until he started getting the short
end of the stick in another thread!

Before we get into how to attract new hams, we should answer the
question "why".

Do you just want massive numbers of new people? Speaking for myself,
the answer is no. I would prefer people who are interested in the art
and science of radio. The vast majority of people are just yakkers and
I'd prefer they not become licensed. Let's be more selective, please.

You don't have to imagine, just look at some of the postings. Silly arguing over who/what started the Civil War, barter vs bought vs purchased, the use of > and >>, all in a thread that started out about unlicensed operators using SSB on the lower end of 40 meters. I don't believe I have ever seen a group take a subject and go so far off on a tangent and argue like 10 years olds about such trivial matters as this one.

This is a problem with all hobbies, people get into them and some get out of them. I am involved in other hobbies as well as ham radio and heve been for many, many years. IF you can keep 10% or 15% each year, that would show a good groth rate over a period of time.

>I'd prefer they not become licensed.

Spoken like a true member of the old guard. Why would you think they would be just a
bunch of yakkers. I would like to see a lot more people on the repeaters across the
country. I have been a long drives with my radio scanning both 2 meter and 440
repeaters, for the most part they are not used very much. On one of my drives I saw the
car in front of be urn off the road into a ditch. This was on a country road will almost no
traffic on it. Of the 10 repeaters I had programmed into my radio that covered the area no
one was one any of them. Before you assume anything, these are repeaters I had used in
the past while in the area so I know I had them programmed correctly

I agree with the above.

First, I believe very few people could pass today's exams by
"word-association" alone: the answers are not in any particular
order. I would submit that anyone who could do so, without learning a
great deal about the concepts in the process, would have to be some
sort of savant.

My own experience: I upgraded to extra last year. To prepare, I
purchased and intensely reviewed two study guides, and wrote my own
test generation software. I also reviewed a fair amount of my own
material.

As a graduate student in electrical engineering with an emphasis in rf
and microelectronics, I deeply resent the implications presented by
some in this newsgroup that those who pass today's exams are somehow
less qualified. The material presented on the exams a fairly
comprehensive representation of concepts important to amateur radio.
Passing them is *not* an easy matter.

I'm also familiar with several hams who have received their licenses after restructuring. Each and every one loves the amateur radio service and is a credit to the hobby. They also display a great deal of operating integrity and good character; something not necessarily seen even in hams licensed for many decades (and something for which the exams have never tested, BTW).

Methinks you copped this from the question pool for the old 1st Class
Radiotelephone license, circa 1960.

Not that it's a bad question. It points towards the realization that
Ohm's law even applies to free space, given the validity of the
inverse-square law.

I re-read what I wrote, above, and don't think it came out quite
right.

I think the fact that the answers are not in any particular order
makes rote memorization much more difficult. And I doubt that the use
of "word-association", without the learning of concepts along the way,
would be possible for most people.

It was about money in the sense that Confederates refused to pay money
to certain people for the services they rendered. This is known as
slavery. Having to pay for labor has a negative effect on the bottom
line, and although the same amount om money would have changed hands in
the Southern enconomy as a whole, it would no longer have been divided
among as small a number of individuals.

Because most people are (gasp!) not interested in radio per se; they are interested in yakking. Nothing wrong with yakking, just keep it on the cell phones, CB or internet. Amateur radio should be for RADIO enthusiasts.

>I would like to see a lot more people on the repeaters across

For emergencies, 911 on a cell phone is far better than the typical repeater, for just the reasons you state. A lot of hams are still living in the old days before cell phones when a ham repeater was often a life saving device. Those days are all but gone. I realize there are some areas of the country with spotty cell phone coverage and a good repeater may be quite useful then. In a few more years, cell coverage will be near universal.

>>Can anyone tell me the standard response to "¡K---¡K" (Morse code SOS).

>>Thanks in advance for your help.

>In nearly all cases, the standard response to an SOS is to notify the
>FCC of an illegal transmission. :-)

Now that we have the sarcastic answer, let's get down to reviewing
mobile distress communication procedures as prescribed in
International Radio Regulations Article 39:

The mobile station (vessel or aircraft) in distress first sends an
ALARM SIGNAL - a set of 12 four-second dashes each separated by one
second by telegraphy or a warbling two-tone signal by telephony.

This is followed by the DISTRESS CALL - the group [SOS] three times,
followed by DE followed by the station call sign sent three times -
then a pause of two minutes and this Distress Call repeated. By
'phone, the word "MAYDAY" is substituted for the group [SOS] and
"THIS IS" or "DELTA ECHO" is substituted for "DE".

This is followed by the DISTRESS MESSAGE - the group [SOS] followed
by the name or ID of the mobile station in distress followed by the
particulars of the position and nature of the distress and any other
information to assist in the rescue. By 'phone the word "MAYDAY" is
substituted for the group [SOS].

A telegraph station then transmits two long dashes (at least 10
seconds each) to facilitate direction-finding followed by the call
sign of the station in distress.

Now we get to the meat of the question --

The above is ACKNOWLEDGED by any station in a position to render
assistance by the sequence [SOS], the call sign of the station in
distress sent 3 times, DE, call sign of the acknowledging station
sent three times, the group [RRR] and then the group [SOS]. By
'phone, the word "MAYDAY" is substituted for the group [SOS], "THIS
IS" or "DELTA ECHO" is substituted for "DE", and "RECEIVED" or
"ROMEO ROMEO ROMEO" is substituted for [RRR].

A distress message (defined above) which is not acknowledged by
another station can be RELAYED by a station not in distress with the
following sequence: Alarm Signal, [DDD] [SOS] [SOS] [SOS] [DDD] DE
call sign of relaying station sent 3 times, Distress Message. By

'phone, the words "MAYDAY RELAY" spoken three times are substituted for the [DDD] [SOS] [SOS] [SOS] [DDD] group, and "THIS IS" or "DELTA ECHO" is substituted for "DE".

The signal used by the mobile station in distress or the station taking control of the situation to notify other stations coming on frequency that a distress is in progress is CQ QRT [SOS] by telegraphy or "TO ALL STATIONS SEELONCE MAYDAY" by 'phone. Any other nearby station which finds it necessary to notify other stations of such silence in the absence of the station in distress or the control station substitutes the word DISTRESS and its own call sign for the group [SOS] or the word "MAYDAY".

When the distress is TERMINATED or the need for radio silence on the frequency is ended, the control station sends the following sequence: [SOS], CQ sent three times, DE, call sign, time of termination, name and call sign of station in distress, QUM (for termination of distress) or QUZ (for termination of silence). By 'phone, the words "HELLO ALL STATIONS" or "CHARLIE QUEBEC" is substituted for CQ, "MAYDAY" is substituted for the group [SOS], "THIS IS" or "DELTA ECHO" is substituted for "DE", "SEELONCE FEENEE" is substituted for QUM and "PRU DONCE" for QUZ.

Although manual Morse telegraphy on 500 kHz is no longer used for Mobile Distress communications, the 'phone procedures are still valid - and used - on 2182 kHz (SSB) 121.5 MHz (AM aircraft) and 156.8 MHz (FM - Channel 16).

The new Global Marine Distress and Safety System, which is MF/HF/VHF and satellite-based, uses Digital Selective Calling for alerts, calls and messages (see FCC Rules Section 80.1101) but permits the 'phone versions of thr above as well as SITOR (same as AMTOR) with the 'phone text spelled out.

I used to teach this stuff.

It's a bloody shame that this is not required - and tested - knowledge for ham communications of any class.

So... this is another form of discrimination..... Classifying a whole group
of people based on the actions of a few. I can understand that some may not
be perfect operators due to things like be nervous or something. But as a
Post-Restructuring Era ham, I also DO NOT condone the CB'er mentality which
can be witnessed in EVERY license class.

Understood, but should they be verbally assaulted for something that MAY not
be within their control? I agree that some people do act stupid and that is

bad for ALL of us, not just the "P.R.E." hams. I wonder about some people though, do they spend more time complaining about "how things used to be" rather that make a positive twist out of it?? Instead of some people bitching and moaning, if they spent more time teaching and training newbies, maybe we ALL would be better for it and it would seem to me to be a better utilization of energy.

One thing that does piss me off is that I would have been a ham back in 1988 if the VE team that tested me followed the rules instead of their own. I still have plenty of novice and tech CSCE's laying around from then till last year, but back then, I actually did pass the code test by all rights (1 solid minute of copy exception) but this team chose to only allow fill in the blank as their only method of the answer sheet. I had one minute of solid copy but they did not accept that. I think I must have some sort of sub-concious reason why the 9 times I have tried the code test since then, that I have failed.

Don't worry, somewhere, somehow I WILL pass the damned code test!!!! It may have beaten me up until this point, but it will not beat me completely.

I actually wish that the manufacturers of equipment would make more single-banded equipment..... As far as I am concerned, I cannot afford one of these multi-band, does everything rigs. Nor will I for the next 5-10 years..... Or at least make something like a 80 and 40 rig or similar.

I work 3 jobs (90-98 hours) just to keep my head above water, and with the ability to only save 10-20 bucks a week, it will take forever. And of course something always comes up that takes that little savings fund away, like the new transmission in the car or some other unexpected expense.

What more is needed than simply being able to e-mail the QSL report
and verify that it is not tampered with, something that existing
e-mail certification already provides? A standard format might be
nice, but that wouldn't take another half year to do (unless it was
being standardized by committee). Of course being able to generate
this from existing logging programs would be great, but once the
standards are disclosed, that can easily be added by the authors
of those programs (if they aren't SK).

Shame that all that blather is not required? What planet are you from?

All that's really needed is knowing what "SOS" for CW and "MAYDAY" for phone means. Practically everybody knows that already. In a real emergency, the other stuff will go out the window and the real, necessary communications will go forward.

A Scenario....

Emergency Caller: "HELP, HELP, MY BOAT IS SINKING"

Control Station: "PLEASE PHRASE YOUR CALL FOR ASSISTANCE CORRECTLY"

Emergency Caller: "WHAT THE HELL ARE YOU TALKING ABOUT? I NEED THE COAST GUARD RIGHT NOW"

Control Station: "THEN YOU MUST USE THE CORRECT PROCEDURE"

Emergency Caller: " **** YOU, JUST CALL THE DAMN COAST GUARD"

Control Station: "FIRST, I MUST HEAR THE WORD 'MAYDAY' REPEATED THREE TIMES. AND WATCH YOUR LANGUAGE, OBSCENITY IS FORBIDDEN BY REGULATIONS".

Emergency Caller: Blub, blub, blub......

Hi, Ryan,

I think that MFJ and Ten Tec both make some nice monoband rigs. Ramsey does, too, if memory serves.

Though a fellow with your work schedule may find it hard to build a kit, there are some nice, affordable QRP kits out there. The Elecraft K2, though getting up there in price, is also up there in performance, though it is reported to be a 30-hour build!

For info on QRP kits, see:

http://www.arrl.org/tis/info/qrphome.html

All of the VECs now stipulate that fill-in-the-blank code tests will be given. Almost all VE teams use their discretion to accept one minute of solid copy, so you may want to shop around a bit by checking with a few different VE teams.

It sounds like you are really close, so if you can find a bit of time to study and practice, I think it will come.

Good luck on the upgrade.

I can sure understand that; over my lifetime, I have had a number of hobbies,
not all of which stuck. Amateur Radio does much better than 10-15%. It has to,
because at least 10-15% of older hams drop out for a variety of reasons.

"Possible?" Probably. But it is, IMHO, far easier to learn concepts and apply 6th-grade math to solve for unknowns than it would be to word-associate all of the material without understanding. I am sure some do for some questions -- I did when I passed my FCC exams, but most hams today do just what I did, to one degree or another. They pass their exams with a combination of learning, memorizing and lucky guessing.

>>D 2.0 V/m

>My answer: B. 0.5 V/m. Not that I was asked.

Well, it appears that everyone who is able to understand the question answered it. Unfortunately, the knowledge you believe to be superior that you gained by taking your tests before the FCC was not enough to answer this fundamental question about electromagnetics. The correct answer is C. 1.0 V/m.

The field strength from an antenna is directly proportional to distance in the far field.

Now, has enough time passed that we can tell the tale that you related to me about your keyboard not having a "1/4" key? Typos DO happen...

Steve, please examine all the postings on the newsgroup. Your bastard
newsreader is the only one that screws up the attributions. Ed corrects
that same newsreader's attribution errors. Why won't you do that?

It's against the gentleman's agreement to post an email and I haven't
done that. But I am not going to keep quite about you threatening to
sue me. The judge is going to laugh you out of court when you tell
him you are sueing me for objecting to you mucking with my attributions.

Like I said, the reason for the Civil War was economics. If the
Southerners could have made more money by freeing the slaves,
they would have done it in a heartbeat. For the most part, they
had no interest in slaves except economic interest.

There were certain questions on which I bit the bullet and rote
memorized the answers, myself -- those covering band limits, for
example. I'm puzzled as to how this would have diminished my license,
though.

I must say, I remain skeptical that most people could effectively
practice word association on the entire question pools without
inadvertently learning something of the concepts along the way.

I suppose some folks with very good memories might try it as a
challenge. Regardless, as you pointed out, one could either learn
basic concepts (each of which would be good for several questions) or
attempt to associate a very large number of words through rote
memorization. I would submit most would choose the former, where
feasible. It's just plain easier.

I did produce them, Steve, in the other thread. You simply refuse
to be nice and accept them as has everyone else on this newsgroup
except you. Why are you being so difficult about this? All it would
take for you to fix the attribution error is a few seconds. It takes
me longer to correct the error than it would take for you to correct
it. Everything between the ******** above is an attribution error.
There should be one ">" per line, not two. There is no posting that
corresponds to the attributes you posted.

Everything between the ******** above is an error in attribution.
Since you refuse to correct the error, I consider it to be a
malicious act.

You muck up the attributes with every post you make and
There's nothing I can really do about it if you choose to
violate the netnews standards. Since libel can result from
mucking with the attributes, you need to be really careful.

You want Moses to come down from the mountain with the standards
carved in stone? The present netnews attribute standard has been
in existence for more than a decade. You seem to be the only one
who chooses to violate the standard. What does that tell you
about yourself, Steve? What possible motive could you have for
screwing up the attributes? Are you a one man army trying to
get the attribute standard changed?

Everything between the ********** above is an attribution error.

It is NOT because I said so, Steve. I have merely explained the standard
to you. If you choose to be the only poster on this newsgroup mucking
with the attributes there's nothing outside of a court order that anyone
can do to stop you. But it's very much like running a KW PACTOR signal in
the lower 25kHz on 40m.

> Can you find ANY evidence that one word of anything YOU said or that I said
> is in error?

It's not the words that are mucked up, Steve, it is the attributes.
Your postings make it impossible to tell who said what.

> Is there any question as to WHO is involved in the conversation?

Try five levels of nesting with multiple paragraphs and see what happens.

> If he make some issue out of an arrow that the newsreader is, for whatever
> reason, not enetering, "oh well"...I have acted in good faith.

That's a laugh, Steve. You are responsible for using that newsreader
responsibly and correcting any errors that it might insert. Why do you
refuse to correct the attribution errors? Please see Ed's postings to
learn how to make the correction.

I'll go with the dictionary definitions (American Heritage):

Yakking: Prolonged, sometimes senseless talk; chatter.

Communicating: To convey information about; make known; impart:

You may color in the various shades of gray as needed.

The reader I have now (Netscape Communicator) doesn't do that. It has one color for all quotes (gray), regardless of layers. However, the previous reader (NewsWatcher) had different colors for each layer. I wish Netscape had that feature (in that one regard, the previous newsreader was better). It only takes a glance to see the various layers when each are a different color.

While it might be ideal, the person calling a distress is not really expected to use proper procedure, Bill. But there are reasons for the responder to. In addition to insuring the response is heard and understood clearly (even by a person near panic), it also installs confidence in the caller (a competent person has heard me and is going to help).

Well, where I live there are large areas with no cell phone coverage, And I am not in a
very remote part of the country. There have been many time that I tried to use my cell
phone and I got a no coverage message. The other problem with cell phones, at least in
N. Ca. is that all cell phone 911 calls go the state highway patrol office in Vallejo. due to
this it is not uncommon to get a busy signal when you make a 911 call with a cell phone.
This has happened to me more than once. As a matter of fact I got so fed up I got rid of
my cell phone after about 3 years.

Why not just say that it varies inversly as the square of the distance
like the multiple choice questions on the tests do? That way the newbies
will have less trouble memorizing it.

Methinks so too, as I remember it or one like it from '62. Once it was considered, among hams, that an Extra class ham ticket was more of an accomplishment than a First Fone. I guess those days are long gone.

You know, Phil, the bureaucracy sometimes stumbles over it's own feet.
In '85 when we first fired up under the new VE system my team made it a
practice to see to it that every newly licensed ham went home with a
free copy of the current FCC regulations pertaining to ham radio, which
I believe included this information. We bought these booklets with our
other VE supplies and paid with our testing expense money collected from
applicants. Wasn't long until we were ordered to cease this practice by
our VEC, seems someone at FCC had decided this was an improper
allocation of testing funds.....

Well, no, it's clear from the hint that the *power* is down to 1/4 if
you double the distance, but he asked about the *field strength*. I
think it's one of those things that require one to realize that empty
space has an impedance, which always seems spooky to me. (Yeah, I
know, it's implicit in Maxwell's equations, but what isn't?) Since
that impedance is constant, shouldn't the voltage be only 1/2 since
power should be square of voltage if impedance is constant?

Well, I see the other side of it too. Having been a nurdy teenage kid who didn't quite get how to get along with those other kids with the funny (but interesting) shapes, I know how important it is to have a place to retreat to where only technical knowledge is important. Computer hacking has been the usual refuge in the last few years; science fiction fandom was the actual refuge for me; but for many people ham radio has been it and might be it again.

>>distance of 200 meters?

>> A. 0.25 V/m
>> B. 0.5 V/m
>> C. 1.0 V/m
>> D 2.0 V/m

> Why not just say that it varies inversly as the square of the distance
>like the multiple choice questions on the tests do? That way the newbies
>will have less trouble memorizing it.

I don't want to do that, Dick. I do not want to give "newbies" incorrect information. The field strength from an antenna varies inversely with distance -- ie, 1/D. Saying that it varies as the inverse square would give B. 0.5 V/m as the answer, and that is the wrong answer. The correct answer is C. 1.0 V/m.

(Unfortunately, our two biggest detractors of the 1000+ question pool method of testing got this simple question about the most fundamental aspect of electromagnetics and application of Ohm's law wrong.)

However, let's let all these newbies "memorize" that the field strength from an antenna varies as the inverse of the distance in the far field. You can learn that concept, too, and see if it lets you get the answer correct this time.

Let's really put your theory to the test. Having taught the concept that the field strength from an antenna varies as the inverse of the distance, let's try the question with new variables, so no one can "word-association" memorize the right answer without understanding. Would everyone who has taken an exam under the VE system with an open question pool please answer the following question:

Q: In the far field of an antenna in free space, if the electric field is a 1 V/m at a distance of 100 meters, what will the electric field be at a distance of 200 meters?

A. 0.25 V/m
B. 0.5 V/m
C. 1.0 V/m
D 2.0 V/m

Let me offer a bit of explanation for those that may be a bit baffled by this inverse distance vs inverse square thing. The field strength, ie the electric field and the magnetic field, from an antenna do vary with the inverse of the distance in the far field. At any given point, the power density follows the

same formulae as does power in a circuit. Thus, at a given point in the far field, the power density = V/m * A/m, for the electric and magnetic fields respectively, in volts/meter and amperes/meter (or volts/centimeter, etc.). So the power density at that point would be V*A/m^2, or W/m^2 (watts per square meter). Because both V and A will follow an inverse distance relationship, the resultant power density follows an inverse square relationship.

To make this interesting, free space has impedance. What this means is that in the far field of an antenna, the relationship between the electric field and magnetic field is such that E/A = 377 ohms. So if at a particular point in the far field, E is 1 V/m, then A, by definition, will be E/377 or 1/377 or 0.00265 A/m. (Yes, this IS Ohm's law as we know it, where R=E/I.)

The rest of the power and Ohm's law permutations apply, too, so knowing the impedance of free space, one can calculate the power density at any point in the far field with the formula:

PD = [(E^2) / 377] / m or PD = [(A^2) *377] /m where PD is the power density in watts/meter, E is the magnitude of the electric field in volts, A is the magnitude of the magnetic field in amperes and m is one meter.

So an electric field of 1V/m would give a power density of [(1 * 1) / 377] / m or 0.00265 watts/meter, or 2.65 milliwatts/meter. An electic field at twice the distance of the first would be at a value of 0.5 V/m, which would give a power density of 0.66 milliwatts/meter, or 1/4 of the value.

So the field strength (electric or magnetic fields) from an antenna varies inversely with the distance and the power density varies as the inverse squared.

>I'll go with the dictionary definitions (American Heritage):

>Yakking: Prolonged, sometimes senseless talk; chatter.

>Communicating: To convey information about; make known; impart:

>You may color in the various shades of gray as needed.

Fair enough. Ham radio has been predominantly filled with yakkers, on CW, digital or voice, for as long as I remember. In what way are the yakkers you want to keep out different than the yakkers we already have? If we are going to consider being exclusionary, I think we should discuss the details and understand just who we are trying to exclude, and why.

Perhaps the most important question to ask here is why we would want to exclude yakkers that would follow FCC rules. Right now, I am working on filings to try to protect various parts of the 2.3-2.4 GHz band. I sure would love to be able to say that the band is filled with ongoing amateur contacts.

You are correct; the description I gave doesn't cover the CW test. I passed my CW test by 100% memorization.

If I understood the context of what you said, you are implying that driving halfway across a state to take a test should light a red light. Do you believe that driving across town is okay, but driving a long distance in some way reflects badly on the test taker? I just don't understand your statement.

> Until then.....

This reminds me of the net that operates SSB in the CW window of 160 M. There is no rule that prohibits it...

So, "until then" what, Steve? You will post attributions in a random manner that no one can understand?

73,

NOT yor opinion on what they ought to be.

>Since libel can result from
>mucking with the attributes, you need to be really careful.

There has been no "mucking", Cecil. That millions of NG posts are made by people using the AOL newsreader EVERY DAY >>IS<< a defacto "standard" in the eyes of the law.

That YOU don't care for the format is irrelevant.

Sorry.

>in existence for more than a decade.

Then why can't YOU produce it?

Cecil, you haven't been able to produce so much as a pamphlet on it. Why?

>You seem to be the only one
>who chooses to violate the standard

What standard, Cecil? Produce it. If it's been around for so long, then
it SHOULD be in writing somewhere. We have the most phenomeonal information
systems at our fingertips since the creation of the Dewey Decimal System, yet
YOU, an alleged engineer, cannot produce for me ONE reference to this alleged
invioable "standard" to which you keep refering.

>Are you a one man army trying to
>get the attribute standard changed?

What standard? In the eyes of the law, that the AOL newsreader is used by
millions of people EVERYDAY in tens-of-thousands of differnet newsgroups IS a
defacto standard.

Not the ONLY one, to be sure, but you will NEVER make a case that I have
misattributed ANYTHING that YOU ahve posted that I have quoted in THIS
newsgroup.

>Everything between the ********** above is an attribution error

Only in YOUR opinion. That, and $2.00, will get you a cup of overpriced
coffee in Seattle.

>
>It is NOT because I said so, Steve. I have merely explained the standard
>to you.

No, you have expressed you OPINION to me, Cecil. And accused me of being
a liar and unethical because I don't accept it.

>But it's very much like running a KW PACTOR signal in
>the lower 25kHz on 40m.

It's nothing of the sort.

FCC Rules and Regulations SPECIFICALLY address this type of behaviour and
lay out penalties for it.

You, on the otherhand, have laid out NOTHING except for your OPINION.

>It's not the words that are mucked up, Steve, it is the attributes.
>Your postings make it impossible to tell who said what.

Only in YOUR mind, Cecil....Only in YOUR mind.

>Try five levels of nesting with multiple paragraphs and see what happens.

That has happened DOZENS of times in posts made by OTHERS, Cecil, NOT by
me, and I am absolutely UNABLE to determine by the number of arrows WHO said
WHAT simply because at some point no NAME was "attributed" to which stack of
arrows.

I don't do that. Again, if I am quoting more than one "author", I will
specifically tag thier comments.

>Why do you
>refuse to correct the attribution errors?

What errors, Cecil? Produce the STANDARD by which you judge that.

>Please see Ed's postings to
>learn how to make the correction.

No correction is required. AOL's newsreader is used on a daily basis and
is, therefore, considered an accepted application.

That YOU don't like it is irrelevant.

Sorry.

Steve

>My goodness, this is getting loud! Maybe someone can do a search for the
>netiquette FAQs and help Steve understand.

Ed, the FACT remains that AOL's newsreader IS used on a daily basis by
hundreds of thousands, if not millions of posts DAILY and therefore IS a de
facto "standard".

That Cecil (and others, for that matter) may not like that I don't care to
go into the program and reformat is irrelevant.

Nothing is "masattributed". Cecil has been identified and given "credit"
for his comments. He would be hard-pressed to prove otherwise.

>This reminds me of the net that operates SSB in the CW window of 160 M.
>There
>is no rule that prohibits it...

Wrong-a-mundo, Kind Sir! FCC REGULATIONS specifically state that certain types of behaviour that violate certain Amateur practice are illegal, and that violation of traditional operating practices are forbidden.

These "practices" are chronicled in tens-of-thousands of editions of QST, CQ, 73, the ARRL Handbook and Operating manual.

Those "standards" ARE documented and ARE protected by federal regulation.

Cecil's "attributions" assertions are NOT.

>So, "until then" what, Steve? You will post attributions in a random manner
>that no one can understand?

"...that no one can understand?" So, you are telling me that suddenly, after three or more years, no on can understand what it is that I am saying?

That after those aforementioned years you have been confused and unable to follow the course of any threads that I generated or participated in..?!?!

Honestly, Ed...?!?! Can you?

The attributions of the above quote are WRONG!

> NO STANDARD EXISTS. That Ed changed anything at your request was either
> simply a courtesy to you, or was done to placate you, the line between the two
> being very thin.

Again you show your ignorance. From Webster's:

"standard - something established by authority, custom, or general consent
as a model or example."

Note that "custom" carries just as much weight as "authority".
The present method of attributing postings to authors has been in force
for more than a decade. It is certainly a standard, i.e. "something
established by custom". Standards do not have to be written down. You
are the only poster I know of who is not giving his general consent
and refusing to follow the standard.

The way I am going to handle this problem that you refuse to correct
is as follows:
****
To whom it may concern: The following attributions have been edited
to correct an error in the previous posting which violates the
netnews attribution standard.
> Subject: Re: Pirates on 40 meters
> From: CAM Cecil.A.Moore@IEEE.org

Then you need glasses, Steve. It was the original posting in the
"Netnews Attributions" thread.

> I see numerous posts expressing your OPINION, however I see NO post
> stating something to the like of "According to the Association of Newsgroup
> Readers, it is considered appropriate to format a newsgroup response in the
> following manner..."

It doesn't have to, Steve. An accepted definition of "standard" is
"something established by authority, custom, or general consent as a
model or example". The netnews attribution standard has been established
by custom and general consent for more than a decade.

In this particular case, my "opinion" is based on facts.

Would you run a KW RTTY QSO in the lower 25kHz of 40m? That is akin
to what you are doing here.

> A STANDARD, Cecil, is a set of parameters that are generally accepted as
> THE set of criteria by which all others should adhere or strive.

Yep, that's exactly right and you are the only poster to this newsgroup
(that I know of) who refuses to adhere or strive to adhere to the
standard. Why do you think that is?

I did very carefully produce it, Steve, in the original posting that
started this thread.

> Cecil, you haven't been able to produce so much as a pamphlet on it. Why?

Pamphlet????? A standard don't need no stinkin' pamphlet.

> What standard, Cecil? Produce it. If it's been around for so long, then
> it SHOULD be in writing somewhere.

It is probably in a netnews FAQ or guideline. Since you appear to be
the only one who is ignorant of the standard, seems to me you are the
one who should be doing the searching. I didn't take you to raise.

> What standard? In the eyes of the law, that the AOL newsreader is used by

False, Steve. The AOL newsreader is a bastard. AOL is not even considered
to be a real Internet Service Provider by savvy internet users. You are
the only poster on r.r.a.p (that I know of) who is violating the
attribution standard. Why do you think that is?

>
> It's nothing of the sort.

Of course it is, Steve. You are the only one on r.r.a.p (that I
know of) who is refusing to honor the attribution standard. To
the best of my knowledge, all other users of the bastard AOL
newsreader take the time to correct the attributions in their
postings.

> FCC Rules and Regulations SPECIFICALLY address this type of behaviour and
> lay out penalties for it.

I wasn't aware of that. I believe it's perfectly legal to run a KW
PACTOR station in the lower 25kHz of 40m as long as you possess an
Extra class license and don't cause interference.

> You, on the otherhand, have laid out NOTHING except for your OPINION.

It is also the opinion of all the other denizens of r.r.a.p and
netnews users in general for more than a decade. That's what
makes it a standard. You are the only person (that I know of)
who wants to violate the standard.

> >It's not the words that are mucked up, Steve, it is the attributes.

Ryan:

I think that the money spent on a single-band 10-m transceiver would
be better invested saving it until there was enough to purchase a full-
coverage HF multi-band transceiver. Since very capable rigs like
the Yaesu FT-840 are available for around $800, wasting half that
amount on a 10-m only rig makes no sense to me!

Dwight:

The debate about the "status" of hams, based on license class,
exists as a result of hams, who have locked themselves out of
attaining the higher license classes through their own laziness
and inaction, being jealous of those who did not, and their desire
to "equalize" their outcomes through the diminution of licensing
standards. Hams like myself, who have attained the highest
"status" the amateur licensing system can provide, don't give
this "status" much thought on a personal, day-to-day level. It
is those who don't have it, and now can never get it, that are
constantly on BOTH the offensive and defense over our so-
called "status."

Prior to Restructuring, there was little, if anything, I could have done
to help you attain Extra class. You would have had to have done
that for yourself, largely through your own effort. Now that
Restructuring is a reality, you can no longer equalize your status
as a ham with those who attained General, Advanced, or Extra
class in the Pre-Restructuring Era. This is a reality which you
now have no choice but to accept. My enjoyment of the ham
radio hobby has not been affected by the cultural changes
associated with Restructuring. I regret that yours has, but there
is nothing I can do about it that you couldn't have done for
yourself two years ago.

>73,
>Ed Hare, W1RFI

Ed:

Not necessarily. I've often said that "Ham radio is what hams make of it, and hams are what they make of themselves." I truly mean that. You have obviously done very well for yourself as a ham, but keep in mind that you have professional-level technical skills, whereas most radio amateurs, by definition, do not. Just don't demand "equality" with hams who had to succeed at a more comprehensive and challenging licensing process, and don't insult our intelligence by insisting that "dumbing down" from those standards is a good thing -- and we'll be just fine!

Ed:

"Courageous?" Sure. Self-serving and politically-correct? Absolutely!
Just another day at the office for you, Ed -- I tell the truth, then you twist it into something that takes the heat off of the ARRL -- which was instrumental in creating our present situation. Nothing new here.

Ed -- you MAKE YOUR LIVING working at ARRL headquarters. You simply MUST take an opposition viewpoint to hams like me who are free to tell the truth about the current amateur radio culture and it's underlying causes. I understand, and don't hold this against you. I can hold my ground on my own; I don't need you to validate me. I can like you and respect you as a fellow ham who has a difference of opinion. I hope you can do the same!

>utilization of energy.

I can't comment on that, Ryan, other than I don't see the "teaching and training
of newbies" as being of prime importance anymore. Even during the days when I was first licensed and upgraded thru Extra class, a time with the most comprehensive and challenging licensing requirements in the history of amateur radio, hams were largely self-trained. This has always been a characteristic of hams. The desire of today's hams to be "trained" by other hams only shows them as being all the more lazy and disaffected than any hams who have come before them. It is the very lack of willingness to open a book, learn something
on their own, to show some curiosity and learning ability, that has hams of my era looking down their noses at hams of your era. Quite frankly, there are more than enough people populating the local repeaters, thank you very much! We don't need any more. What we do need are more people to "work" on CW, PSK-31, and on the VHF weak-signal modes. We need more people to take an active role in emergency communications, the leadership of our clubs, and to provide significant, meaningful financial support to help renew and update the local amateur radio infrastructures that give us our emergency capability. And, no matter where you fall on the Morse code testing requirements continuum, you must embrace that mode with a positive attitude and no excuses.

>Before you manage to get your foot even further down your throat you
>need to know that I am only a few years older than you

And you think that insulates you from practicing ageism. When I reefer to you and Bruce
and Larry as practitioners of ageism I am 100% correct. Most new hams are going to be
quite a bit younger than you or I for that matter. You and Larry as well as Bruce are the
type of people that these new hams should be exposed to. At least you three (the three
stooges) are in the minority as far as older hams are concerned. I know quite a few older
hams in my area that are nothing like you three. About the only things you guys have left
to contribute to ham radio is what you have in your wallets. As far as what you have in
you brains, it would seem you forgot how to use that. I understand you have done VE
work in the past to further ham radio, but as one poster mentioned quite a while ago, it
would seem you are intent on undoing what you have done in the past. As far as my
background in ham radio, I have only been licensed for a short time, but that does not
mean that I am not a good operator. Non of you has any idea what kind of an operator I
am, Non of you are in my log book. OF course the worst operators I have heard on the air
have been older guys (I can tell an older persons voice when I hear it) with 1x3 calls. I is
amazing how many times I hear a DX station calling for the west coast on the United
States and all I hear are idiots on the east cost trying to work him. These have been old
farts with 1x3 calls for the most part. They have not moved to the west coast and kept
their call signs. When they give the DX station their QTH they are in states like New
York, Ohio, Minn., Mich., and so on. When I hear JA’s calling for the east coast I do not
work them. Perhaps some of the Old Hams should take a geography test.

Well, if you have Netscape Communicator (with the built-in newsreader), you can change that (I really hate the italics). In the preferences, look for "Mail & Newsgroups." It it the first option on the top of that preference window (you'll see it). I set the quoted text to "plain," and selected gray as the color (try bright red if gray is too hard to see). The plain text is easier to read, but the color still separates quoted material from the rest of the page.

Of course, if you're using a PC, the locations may be slightly different. In that case, you'll have to look around for that option.

All hams think they're higher than the peons, so there really is no need to add that one to the list. But Rich may have to add to the other end of the list - more than a few hams certainly think they're higher than the Pope.

Agreed, a calm but competent voice at the control station end is always
a great help.

IMO, there are more important things to be taught to the potential
calling station than voice procedure. For instance, knowing where you
are is a major problem when using radio (as opposed to a phone),
especially out in the boonies. People should be taught to be aware of
their surroundings ("I'm about a mile south of the big hill with the
water tank on top") and if possible, to use a GPS. Learn to use a
compass for bearings. Learn CPR and basic first aid. Learn water
rescue. I could go on, but you get the idea.

At least, I am glad to see that people are interested in such things.

The illegal operators using LSB on the lower end of 40 meters lied about their attributes, I think that is what started the Civil War.

I'm not really trying to exclude yakkers. I just think they don't serve much useful purpose to the amateur service. Yakkers will always be with us, I realize. I can live with it.

Speaking of microwaves and changing the subject slightly, I'd be glad to trade all our microwave allocations for broadcast-free HF bands. I think the future of amateur radio is HF and VHF. Microwave is an interesting part of the spectrum but not highly useful to hams, IMHO. Much more valuable to the commercial users (which is actually us, in many cases).

That should generate a flame or two. Someone is sure to mention "Two Hundred Meters and Down". :-)

As I mentioned before, I remember this one from the 1st 'Phone
test I took waaaaay baaack in Nineteen Ought Sixty. I remembered
it because I *memorized* the fact that it was a counterintuitive
wanker that I had to be on the lookout for.

I think RFI's little exercise vividly illustrates that preparing for
a test is quite different than casually dealing with a body of acquired
knowledge. You really have to be on your toes and *study to the test*.
I went over and over the Q&A study guides for every amateur and
commercial test I took. And I probably would have failed them on
distractors like the one's in Ed's question had I not developed a
close familiarity with the phrasing and tone of the questions.

The answer is that you have to do both - understand the principles
AND understand the test.

There isn't any debate, Larry. Your whining is a nuisance, not a debate. And, considering how many messages you've posted over the last few months touting your imaginary status, it is a little hard to believe that you've given it little thought. Instead, you seem to be desperately trying to convince us, or perhaps yourself, that you have that status. People with true status don't have to convince others they have it.

Who cares? As I've already said, ham radio is not about status. All I, and most hams, care about is operating privileges, and Restructuring has made that much easier for me to obtain.

You're right, my enjoyment has changed since Restructuring. I'm absolutely thrilled with the changes brought about by Restructuring and I'm looking forward to taking advantage of those changes. In fact, I'm even looking forward to still more changes in the future.

Let's hear it for some good, old-fashioned elitist snobbery -- especially the elitist part. There is a time and a place for it to be sure but in and of itself it is what makes the world turn. There is probably a time and place to sing Kumbaya as well but far more times when a man says he is better than this bunch of bubbleheads and gets his degree, starts a business, runs pass patterns til he pukes, sells a concept to a corporate board, or teaches himself a bit of radio.

Why is it we do not want to talk about ego and class? Is it perhaps Ayn Rand's Law: the most unpopular man in the room is the guy who articulates what everyone else in the room already knows?

While living in Wisconsin, parts of which have the shared-poverty mentality common to places where not much is happening I happened to be in a Mac and Don's killing time over a cup when a bunch of tech schoolies wandered in an started raising hell. In my window-shaking bass-baritone I told one of them to sit down and shut up. He did but several seconds later started declaiming at great length how I thought I was better than them (stuck-up is a bad thing among losers). I replied that if I did not think I was better I would be an idiot and if I didn't say it I'd be a liar and I did not claim to be either. Having thrown the Holy Hand Grenade, he was dumbfounded; but his girl friend nearly split a gut.

Why should I give rat tits about the opinions of me carried by some total loser?

>I did very carefully produce it, Steve, in the original posting that
>started this thread.

No, Cecil...What you have "produced" was your OPINION on the matter. A "standard" is a statement of parameters published in some professional media that sets the guidelines for some given topic.

Yes, you have restated over and over, >>without substantiation by any STANDARD,<< how you feel these "attributes" should be.

>Pamphlet????? A standard don't need no stinkin' pamphlet.

No, it doesn't. But it needs to be public information and published for general reference, Cecil.

Or didn't they teach you that in Engineer's school.

>It is probably in a netnews FAQ or guideline.

here we go with the "probably" stuff again. Seems to me, cecil, that since you are SOOOOOO adamant about this and so certain that this "standard" exisits, that you could produce some reference to it.

>Since you appear to be
>the only one who is ignorant of the standard, seems to me you are the
>one who should be doing the searching.

I redirect you to the above statement.

Again, you come here making some assertion of fact, then when someone "calls" you on it, you state it's THIER business to find it out since they have the temerity to NOT just take your word for it.

YOU made the assertion....YOU provide the facts.

>You are
>the only poster on r.r.a.p (that I know of) who is violating the
>attribution standard.

What standard? Where is it? Who published it? If it's a "standard" why is there more than one option...?!?!

>Why do you think that is?

Just to get your goat, I suppose. Why do YOU think, Cecil?

The U S Power Squadron, an all-volunteer organization, teaches all
of the above in addition to proper/standardized radiotelephone
procedure to recreational boaters.

You asked about the format of acknowledging [SOS]. Remember please
that a Morse [SOS] was not sent by a Sunday boater but by a
PROFESSIONAL licensed radio officer on an ocean-going vessel carring
mandatory radio equipment and following procedures prescribed by
maritime safety law.

Following what you call "bureaucracy" is what differentiates
the professional communicator from the dillitant, whether it's a
shipboard radio officer or a public safety dispatcher.

>At least, I am glad to see that people are interested in such things.

Lots of folks are.

>> >But it's very much like running a KW PACTOR signal in
>> >the lower 25kHz on 40m.

>>It's nothing of the sort.

>Of course it is, Steve.

No, it's not. (And of course you edited out the context of my other response, making it appear as though it was unfounded...and you have the temerity to accuse me of "mucking" with attributes and quotes.....)

FCC Rules and Regulations CLEARLY state that violations of established band plans and gentlemen's agreements VIOLATE those Rules and Regulations.

Those bandplans and gentleman's agreements are widely disseminated in numerous Amateur media. On my desk right now are several very "slickly" produced posters from ICOM detailing accepted band plans from 160 meters all the way through 2400MHz.

SO FAR...you haven't produced ONE reference to the "standards" you have asserted.

>You are the only one on r.r.a.p (that I
>know of) who is refusing to honor the attribution standard.

And YOU are the only one in rrap making an issue of it, and for very dubious reasons I might add.

>To
>the best of my knowledge, all other users of the bastard AOL
>newsreader take the time to correct the attributions in their
>postings.

So far you are the only one who seems to have a problem following the flow of the conversations. And you say I am using the bastard reader?

>> FCC Rules and Regulations SPECIFICALLY address this type of behaviour and
>> lay out penalties for it.

>I wasn't aware of that. I believe it's perfectly legal to run a KW
>PACTOR station in the lower 25kHz of 40m as long as you possess an
>Extra class license and don't cause interference.

"Good Amateur Practice" Read about it. It's in the ARRL Operating manual...almost any issue since I was first licensed (1972). If you don't have a copy of it, I will get one for you. I can also obtain copies of public comments made by Mr. Riley Hollingsworth and other FCC officials that assert their intent to rely upon those plans as the means by which they will determine "fault" for co-mutual interference.

(THAT, Cecil, is a REFERENCE)

>> >Your postings make it impossible to tell who said what.

>> Only in YOUR mind, Cecil....Only in YOUR mind.

>And the minds of millions of netnews readers.

Oh...?!?! I participate in about a dozen other NG's at one time or another. No one else has had a problem...ONLY you.

>> I don't do that. Again, if I am quoting more than one "author", I will
>> specifically tag thier comments.
>
>You forgot to say that you tag them incorrectly.

Proof, please.

>The AOL newsreader meets the definition of "bastard". Most of the users
>of bastard newsreaders have replaced them or manually correct them.

"MOST", Cecil...?!?!

That's ANOTHER assertion I would like for your to substantiate. There are what..?!?! 10 million people on AOL...?!?! (using thier TV ads..I personally have no Earthly idea...)

Even if there is only 1 million, "most" is indicative of at least 50.1% or better. So...YOU have some "insight" as to what 500,100 people have done with their "newsnet attributes"...?!?!

THIS I have GOT to see.....

No, they were not.

>"standard - something established by authority, custom, or general consent
>as a model or example."

I see you are back into the dictionary, Cecil.

Do they have the STANDARD that DICTATES how newsgroup posts SHALL be
made...?!?

Because you are DICTATING how I SHALL post.

Sorry, Cecil. You still have not provided ANY reference to any law, rule
or regulation that directs otherwise.

There is MORE than one way of doing it...Your assertions vis-a-vis your
illegal drug advocacy as example...

I guess that that attitude only prevails for YOUR arguments...huh...?!?!

>Note that "custom" carries just as much weight as "authority".
>The present method of attributing postings to authors has been in force
>for more than a decade.

"In force", Cecil..?!?!

If it's so strict, WHERE ARE THE STANDARDS...?!?!

>Standards do not have to be written down.

Cecil, how can something be "standard" if it's not recorded
somewhere...?!?!

This is 2001, not 1002 where word of mouth was the defacto method of
communication and record keeping.

Where's the evidence? Where are the facts?

>You
>are the only poster I know of who is not giving his general consent
>and refusing to follow the standard.

I am using one of SEVERAL posting techniques, Cecil. It is neither right nor wrong. That you don't like it is unfortunate, but one of the speed bumps in life.

You just have to get over it.

In order to be "inferior to or less than some sandard" THAT STANDARD must be of public knowledge and of some established and mutually agreed upon parameters.

Cecil, HOW can you make the claim that AOL's newsreader is "inferior" to something that YOU cannot produce a milestone to gauge it against?

WHAT was your degree in engineering in, Cecil...?!?! Jury-rigging?

The above is correct. You could also notice the units given for the field strength --
V/m is "volts per meter". Nothing square about it :)

>> NOTHING.

>Then you need glasses, Steve. It was the original posting in the
>"Netnews Attributions" thread.

Cecil, if you were still (if ever) an engineer and a colleague asked you
for a reference to a technical parameter or "standard" and you responded with
what you pass off as such, you'd be the laughing stock of the office.

Here, in it's entirety, is the first post you made in "Netnews
Attributions".

At no point in the post do you make ANY reference to ANY documented
"standard" by which this was suggested.

At no point in any SUBSEQUENT post do you provide any rule, law or
regulation that states that YOUR assertion is the one, true, and binding
"standard" by which any of this is offered.

It is OPINION, Cecil. YOU prefer to do it one way. I don't.

I prefer to not allow dope on the streets.

You do.

I prefer to prosecute dope users AND peddlars.

You don't.

Opinions, Cecil. That's all they are.

Below is your original "Netnews Attributes" post.

WHERE are the references..?!?!

WHO established the parameters by which this is gauged?

WHERE are the binding rules or regulations that say anything else is a lie
or unethical...?!?!

Opinion, Cecil...that's ALL IT IS.

Here is the netnews standard for attributions. Poster1 wrote
Posting1, Poster2 wrote Posting2, etc.

Poster1 wrote:

> Poster2 wrote:

> > Poster3 wrote:

> > > Poster4 wrote:

> Posting1

> > Posting2

> > > Posting3

> > > > Posting4

These postings are said to be nested and there is a unique nesting
level for each posting which corresponds to the poster. If we
abandon this standard, nobody will know who said what in postings
with several nesting levels. Postings should be attributed to the
person who does the posting, not to someone else. Any newsreader
that doesn't follow this standard should be manually edited for
correct attributions before posting.

> In order to be "inferior to or less than some sandard" THAT STANDARD must
> be of public knowledge and of some established and mutually agreed upon
> parameters.

And it has been exactly that, Steve. Ever since RN, TRN, TIN, ... Netscape,
the newsreader designers have followed the present attribution standard.
But I'm not a bit surprised that AOL created a bastard newsreader. They
have never been part of the internet. They just have an interface to
the internet.

> Cecil, HOW can you make the claim that AOL's newsreader is "inferior" to
> something that YOU cannot produce a milestone to gauge it against?

Steve, all the other newsreaders handle the attributions according to
the standard. The AOL newsreader is clearly a bastard. But if you want
to use a bastard newsreader and be the only rotten apple on the newsgroup,
that's your choice. The above disclaimer will protect me from your
attribution mischief so I am satisfied. You have clearly demonstrated
what kind of person you really are.
--
cheers, Cecil

>person.

Oooops...forgot your disclaimer, Cecil...!!!

How soon you forget!

And so far, no "knowledgeable person" has come forth with the alleged standards that you allude to.

I would think that by now someone could have produced (especially a retired electrical engineer) some reference to technical standards to which he asserts some adherence is mandatory.

YOU have not.

>>YOU made the assertion....YOU provide the facts.
>
>I have provided the facts, Steve. You choose to ignore them.

You have provided NOTHING but your OPINION, Cecil.

That the technique you prefer is in wide acceptance or use IS a fact.
That it is NOT the ONLY one is a fact also.

The STANDARDS, please, Cecil. Some source of PUBLIC reference that delineates what is acceptable or not, or mandates one form of positing over another.

Until then, you are tilting at windmills, Senor Quixote.

Steve

Your comments from the most recent previous post to this thread:

QUOTE:

The AOL newsreader meets the definition of "bastard". Most of the users
of bastard newsreaders have replaced them or manually correct them.

UNQUOTE.

That is not what you said. But then you are very handy at after-the-fact
editing.

>I've spent way too
>much time trying to educate you about those standards and trying to
>talk you into ceasing and desisting in your violations of those
>standards.

What standards, Cecil? References, please.

>Knock yourself out. Be the rotten apple if you so choose.

You are the one getting "knock(ed) out", Cecil. You keep making
assertions of standards that you cannot substantiate.

Just spend some time doing a bit of research (you DO know what RESEARCH is,
don't you...?!?!) instead of trying to bully me in this forum, and perhaps you
can prevail.

I doubt it, but you might.

No references, Steve. Look at all the other postings and then look at yours. If you are naked and everyone else has on clothes, doesn't that tell you something?

I don't have access to any UNIX standards but I suspect that is where the present netnews attribution standard comes from. Obviously, there exists a standard and you are the only one choosing to violate it. In any case, knock yourself out. Violate the standards all you choose. I'll simply edit away your attribution violations.

Maybe to you it seems that way. One market for a single band 10m all mode
rig is for the guys who use transverters on V/UHF and the microwave bands.
Most of the time the IF frequency is either 10m or 2m. A cheap 10m rig like
the Radio Shack model lets them use their transverters without having to tie
up a much more expensive, and large, multiband H.F. radio. When those guys
go mountain topping they don't want to drag around a big rig if they don't
have to.

Probably UNIX. If I remember right from the 1980s, that's how UNIX handles email attributes. Fortunately for me, I left all my UNIX reference material behind at Intel.

Phil, I'll never forget one time when I was with Command, Amphibious Group 1, in the Navy during Vietnam. I was a radioman. I was sleeping (8 hours on, 8 hours off 24/7) during my off period when I was shaken awake with the question "can you copy Morse Code?". I couldn't believe what was happening. All radiomen were SUPPOSED to be able to copy Morse, but only two of us could with any proficiency. There was an SOS on 500 KHZ - and the idiots at NPN (Guam) and NPO (Phillipean Islands) were calling the station sending the SOS ON HIS FREQUENCY! They were even calling him WHILE HE WAS TRANSMITTING THE SOS! I've heard amateur pile-ups, but that was about the craziest thing I have ever witnessed. I had copied 40 WPM perfect copy at Bainbridge, MD, but was having a time of it through the mess. The other guy must have been a contester because he managed to copy it to a typewriter - but I had skid marks in my skivvies on that day. Maybe the amateur radio training isn't such a bad idea after all!

Again...more "I suspect..." (first cousin to "probably") No data, no facts,
no kidding.

>Obviously,
>there exists a standard and you are the only one choosing to violate
>it.

I can't violate that which I can't refer to, Cecil. Where are the
standards?

YOU state that there are "obviously" standards, yet you CAN'T PRODUCE THEM.

>I'll simply edit away your attribution violations.

At first you assert that you can't keep track of the attributions, then
you state that you will "edit away (my) attribution violations."

How can you edit away something that you have no idea what it refers to,
nor do you have a standard by which to edit them...?!?!

Obviously, the problem is STILL yours.

Cecil, in a recent e mail you assert that I have made myself a "laughing stock" over this exchange...Yet I can't help but wonder where the bulk of that silent humor is being directed.

You use the e mail alias of the premier engineering organization in the United States, yet you are unable or unwilling to produce technical standards that you alledge are being violated. Not very indicative of any engineering skills, is it?

In another thread on a completely different topic you rail against any suggestion that adherence to any standard of society is contradictory to freedom, yet in THIS thread you assert that failure to adhere to those "standards" that YOU consider invioable are "unethical"

Unfortunately, more of the famous Moore "Do As I Say, Don't Do As I Do" rhetoric.

>Violate the standards all you
>choose.

What standards, Cecil? The one's you keep insisting exist, yet you, a professional engineer, haven't been able to produce in over a week now...?!?!

We're still waiting, Cecil.....

Patiently yours,

Steve

>That is certainly what I implied.

Cecil..."implied" means there was hidden intent. Was there? I imagine there was. Are we now supposed to try to read your mind to determine that anything you added or left out was intentional?

You AGAIN deleted the context of the post to which you respond. Again you demonstrate the temerity to accuse others of "unethical" posting habits while being blatantly so yourself.

>When I refer to posters, I am
>most likely referring to posters to this newsgroup.

"Most likely..."...?!?! Again you impose upon us the responsibility of TRYING to determine what your intent MIGHT have been.

>Grasping at straws, are we?

"We..", Cecil...?!?! Got a mouse in your pocket?

>Trying to force me to make English a context-free
>language?

As evidenced by your snippage and editing above, I'd say you are well on your way. You delete whatever YOU care to. "Context" generally tends to ruin your rants. This was a case in point.

>>What standards, Cecil? References, please.
>
>Probably UNIX.

"Probably" again, Cecil...?!?! Can you not deal with ONE certainty? ONE fact? ONE absolute which does NOT originate with "If I recall....."

>If I remember right from the 1980s, that's how
>UNIX handles email attributes. Fortunately for me, I left all
>my UNIX reference material behind at Intel.

More excuses. As blatant as it gets.....

I bet you did the "dog ate my homework" routine in high school, too, didn't you...?!?!

I guess none of that "UNIX" stuff to which you now attribute your failure as a researcher ever made it to archives you can recall from your PC, huh...?!?! here's not ONE of your Intel buddies you can call or e mail to get a lead on some FACTS, Cecil...?!?!

I imagine that you left more than some old files behind at Intel, Cecil.

Bill, this is an interesting subject which has, in the past, drawn some knee-jerk response from me. In stating we would forego the microwave spectrum in favor of some good HF spectrum, we might - just might - take a look at who is using the microwave spectrum (and why). I currently subscribe to Direct Tv. Up in the gigahertz. Many of us use cell phones. I have a spread-spectrum 900 MHz cordless phone and it is considered boardering on obsolesence. What is happening? Wireless speakers. Kodak has announced wireless digital cameras. Sure, take a picture and if you like it, press a button and it is automatically sent anywhere in the world. Golly gee, kinda makes us obsolete, right? I honestly believe we have to fight to retain our VHF/UHF (yep, and SHF) frequencies. It"s a lot easier throwing stones at the ARRL than actually doing something about what problems we may face. Consider what has happened since perhaps 1970. Yes, repeaters existed in the early '70s - and mobile telephones were something else. Remember the mobile telephone operator? I honestly cannot say what the price was, but it was approaching $1.00 per minute of use plus perhaps $75.00 per month. It was expensive. As electronics progresses, we are face with inexpensive devices that may make the public's live easier (I'm all in favor of that), but may leave amateur radio operators facing loss of a LOT of spectrum. You might care to rethink trading the microwave portion for HF (satellites and other methods may well leave HF looking rather poorly. Ever run a hundred kilobaud on HF? Why not?).

>will!

That is sheer nonsense, Larry, made up so you can somehow make what you do to others here seem noble in your own mind. There are many hams that I know only from this forum, and others that I know only from on the air. I am able to draw conclusions about who and what they are from the content of their communication, not the medium they use. The medium does not change the message, Larry. I can't imagine how you could believe that it does, except that doing so serves your own self interests on this forum and somehow persuades you that the things you do and say are not hurtful to Amateur Radio or the person on the other end.

I know, I know -- Amateur Radio will be ruined any day now, just everybody watch and see. Larry, trust me on this one; I acklnowledge that you took a more compreshensive test to become a fully qualified ham than I did. I also do not believe for one minute that you and I are equal.

>"Courageous?" Sure. Self-serving and politically-correct? Absolutely!

And just what is "politically correct" about what I said, Larry? Unless, of course, you define politically correct as anything that contradicts your view or expresses an opinion that you are less than the ideal ham that you believe yourself to be. IMHO, what you have said and done here has permanently disqualified you from the status that you believe you so richly deserve.

>Just another day at the office for you, Ed -- I tell the truth, then you twist
>it into something that takes the heat off of the ARRL -- which was
>instrumental in creating our present situation. Nothing new here.

I didn't see the word "ARRL" anywhere in my post, or in the post I responded to. What fantasy are you building now?

>Ed -- you MAKE YOUR LIVING working at ARRL headquarters. You
>simply MUST take an opposition viewpoint to hams like me who are
>free to tell the truth about the current amateur radio culture and it's
>underlying causes.

No, Larry, I don't "must" take any position on rec.radio.amateur.policy. I must help the ARRL in its filings before the FCC. I must help hams with RFI problems. I must sign the Lab staff time cards every week. My boss thinks that rrap is a profound waste of time and could care less whether I post here or not. I am afraid, Larry, that you are building another fantasy here.

>I understand, and don't hold this against you. I
>can hold my ground on my own; I don't need you to validate me.

No, you have made it pretty clear that the only validation you find necessary is the fact that you once passed what seemed to you at the time to be a difficult ham test. Pretty sad, actually, when you look at the truly useful validations done by many of your fellows over the years.

>>This reminds me of the net that operates SSB in the CW window of 160 M.
>>There is no rule that prohibits it...

> Wrong-a-mundo, Kind Sir! FCC REGULATIONS specifically state that
> certain types of behaviour that violate certain Amateur practice are illegal,
and
>that violation of traditional operating practices are forbidden.

Absolutely not. In fact, ARRL asked the FCC to issue a declaratory ruling that would have deemed operation outside the recognized band plans to be in violation of the requirement to use good amateur practice in our operating. The FCC refused to do so.

>These "practices" are chronicled in tens-of-thousands of editions of
>QST, CQ, 73, the ARRL Handbook and Operating manual.

And the practices Cecil is discussing are chronicled in millions of usenet postings.

>Those "standards" ARE documented and ARE protected by federal
>regulation.

Absolutely not. The example I gave of an SSB op on 160 M operating in the CW window is not in violation of any FCC rule. If you disagree, please produce the rule.

> Cecil's "attributions" assertions are NOT.

Your assertation and Cecils are equal in their regulatory status, Steve. None wrt the example I provided. One can operate SSB anywhere on 160 M where the modulating sidebands are entirely within the 160 M band.

>>So, "until then" what, Steve? You will post attributions in a random manner
>>that no one can understand?

> "...that no one can understand?" So, you are telling me that suddenly,
>after three or more years, no on can understand what it is that I am saying?

You are correct and I was incorrect when I said that. Much like poor spelling, one can usually fathom the meaning of your attributions even though they are not done correctly.

Let's post them here, just so those who got the answer wrong can see what new hams are "word-association memorizing without understanding:"

G0C01 @G0C01 (C)
If the free-space far-field strength of a 10-MHz dipole antenna measures 1.0 millivolts per meter at a distance of 5 wavelengths, what will the field strength measure at a distance of 10 wavelengths?
A. 0.10 millivolts per meter
B. 0.25 millivolts per meter
C. 0.50 millivolts per meter
D. 1.0 millivolts per meter

G0C02 @G0C02 (B)
If the free-space far-field strength of a 28-MHz Yagi antenna measures 4.0 millivolts per meter at a distance of 5 wavelengths, what will the field strength measure at a distance of 20 wavelengths?
A. 2.0 millivolts per meter
B. 1.0 millivolts per meter
C. 0.50 millivolts per meter
D. 0.25 millivolts per meter

G0C03 @G0C03 (A)
If the free-space far-field strength of a 1.8-MHz dipole antenna measures 9 microvolts per meter at a distance of 4 wavelengths, what will the field strength measure at a distance of 12 wavelengths?
A. 3 microvolts per meter
B. 3.6 microvolts per meter
C. 4.8 microvolts per meter
D. 10 microvolts per meter

G0C04 @G0C04 (D)
If the free-space far-field power density of a 18-MHz Yagi antenna measures 10 milliwatts per square meter at a distance of 3 wavelengths, what will it measure at a distance of 6 wavelengths?
A. 11 milliwatts per square meter
B. 5.0 milliwatts per square meter
C. 3.3 milliwatts per square meter
D. 2.5 milliwatts per square meter

G0C05 @G0C05 (B)
If the free-space far-field power density of an antenna measures 9 milliwatts per square meter at a distance of 5 wavelengths, what will the field strength measure at a distance of 15 wavelengths?
A. 3 milliwatts per square meter
B. 1 milliwatt per square meter
C. 0.9 milliwatt per square meter
D. 0.09 milliwatt per square meter

G0C06 @G0C06 (A)
What factors determine the location of the boundary between the near and far fields of an antenna?
A. Wavelength of the signal and physical size of the antenna
B. Antenna height and element material
C. Boom length and element material
D. Transmitter power and antenna gain

>Ok just for your Benefit I will say "C:

Well, I'll be. You must have learned this when you studied for your Extra,
because most of the FCC-tested hams who chose to answer it got it wrong.

That is especially unfortunate for Larry, because now that he has failed the
test, he will never be able to achieve the same full status on rrap that will
be accorded to those like you that got the answer correct.

I don't know anything about that AOL newsreader. Apparently there is
a selection for "AOL Quotes" and "Standard Quotes" available at the
click of a mouse. Seems even AOL admits there is a "standard" for
quotes.

From: w1rfi@aol.com (W1RFI)

>Let's post them here, just so those who got the answer wrong can see what new
>hams are "word-association memorizing without understanding:"

And, as a followup, let's post the correct answer here, so people can judge whether those that claim that hams are recognizing the correct answers without even knowing the question are correct or not:

>C. 0.50 millivolts per meter
>B. 1.0 millivolts per meter
>A. 3 microvolts per meter
>D. 2.5 milliwatts per square meter
>B. 1 milliwatt per square meter
>A. Wavelength of the signal and physical size of the antenna

Oh, btw, here are some distractors from the same questions:

>D. 1.0 millivolts per meter
>C. 0.50 millivolts per meter

Not quite a perfect set of distractors, but I bet most people find it easier to memorize that E and H vary as 1/D and PD varies as 1/D^2, then do the 6th-grade math.

You really are into violating netnews rules, aren't you, Steve.
Those rules say to trim an article as much as possible and that's
what I did. If there's a part that I am not going to respond to,
I trim it just like the rules tell me to do. Have you ever read
the netnews rules and guidelines?

> "Probably" again, Cecil...?!?! Can you not deal with ONE certainty? ONE
> fact? ONE absolute which does NOT originate with "If I recall....."

Steve, I'm told that, at the click of a mouse button, your newsreader
allows selection of "standard" style quotes or "AOL" style quotes. Even
AOL admits there is a standard and it has been available to you all
along. I am also told that the attribute standard is covered by
RFC2426.

Correction: The AOL newsreader allows mouse button selection of
"Internet Style" quoting and "AOL Style" quoting. Since netnews is
on Internet, the selection of "Internet Style" is a no-brainer for
most people. Even AOL recognizes that there is a difference between
"Internet Style" quotes and "AOL Style" quotes.

The internet standards are available at:

I hate to tell you ED, but I didnt study for the Extra, didnt even take one of them Memory Tests that are on the Net, as a matter of fact I had no Idea what was going to be on the TEST. And truthfully the only reason I took it, was a Couple of No-Codes Bet me $250.00 I couldnt pass it. So the next day I met them at the Test Site and took it, while they took the Tech+ and both failed it. But they did pay me the money. And really, I didnt want the Extra I was very Happy with the Advanced.
I thought after I took the test that the Questions were stupid. It took me a total of 8 Minutes to answer the Questions on the written, and before you ask I missed 1, it related to some Freq that an Extra was alloyed to use.

1928. Morse Code and the disabled...

Newsgroup: rec.radio.amateur.policy
Date: 2001-08-29 04:49:09 UTC
From: KenF <skydiver94@home.com>
Message-ID: <9v_i7.15170$MK5.10104117@news1.sttln1.wa.home.com>
Source record: 18222

Hi all,

I am totally new to HAM radio, and I really don't know much, so please be gentle.

I am asking a question for my girlfriend who is disabled, and may like to get into HAM radio.

I have done a search on deja, and caught some glimpses of some comments on the subject concerning the disabled and Morse Code. Based on this, my questions may cause some to do a double take.

I am not asking about a waiver for the Morse Code requirements. I am asking if it's possible for her to ONLY do Morse Code.

She has severe Cerebral Palsy, and has no functional use of her arms or legs. She is also unable to communicate verbally.

Her primary means of communication is tilting her head back and forth to produce Morse Code. When she tilts her head left, it produces a dash; when she tilts her head right, it produces a dot.

This Morse Code is then translated by a computer that she has mounted on her wheelchair. She controlls her computer fully by Morse Code, including mouse functions. Anything you can do on a computer, she can do too completely with Morse Code.

She has graduated from college, and has even earned a restricted skydivers license, so she is able to take written tests.

So, on to my specific questions:

1) Would her inability to communicate verbally keep her from getting a HAM license?

2) Are there any HAM PC interfaces that would allow her to communicate through her computer since would be unable to tune a HAM radio manually?

3) Assuming there is such an interface, would it be able to send morse code directly, or through a translation interface?

Thanks for your patiences. Let me know if you have any questions.

Ken

You having comprehension problems too, ED? I told him to do his own digging in the archives, I've answered all that many times and feel no obligation to to do it again for him just because he's a late comer. He has shown clearly that he isn't interested in anything but yakking trolling and causing greif for others with whom he doesn't agree. That's his choice, and I made mine.

No, I don't "THINK" it I *KNOW* it. You act like you have a full grip on ham radio as a rank newcomer, and of course the ARRL types will let you get away with it (don't want to alienate a potential dues paying member, now do we?) The rest of us will put you in your place. Hang around and learn a few years, then get back in the fray. By then you might acquire a clue.
You are so typical of so many newcomers today - you arrive here with all the answers, but alas, you have no clue as to the questions.

You can usually get a 10 meter only rig used for $100 or so, if you watch for one. But Larry's advice is good- You will get far more out of ham radio with a full coverage HF rig. And there are lots of them around for considerably less that the $800 he mentioned. The earlier all solid state Kenwoods can be had for $250-300 (TS120, TS130, and a little more for later versions, TS140 etc.Or the Icom 730 and IC735, even the venerable 740 and 745. A later rig that is very excellent is the Alinco HF series, the DX70T and DX70TH, or DX77. Lots of those are going for $400 and up. I picked up one for a spare and like it very much. Just make sure to have someone familiar with the rig check it over if possible or get a guaranteed return privilege if you buy without it. There are lots of "deals" that you don't want to make!

That was a rank mistake by that VE team that should not have been
allowed to pass. You had every right to protest to their VEC if they
insisted on disallowing the one minute solid copy. I wish you had.

It's been several years, but as I recall the regulations required a
one minute solid copy to pass regardless of what other criteria were in
place.
As a VE team leader I always made sure the applicant got every legal
consideration. I know that wasn't always the case in every team.

Good point. Both Second phone and Advanced covered far more territory
in more depth than First or Extra. But if you got that 'bad' First exam
you had your hands full...it was the only test I ever had to take again,
just missed on the first try - when he counted the correct answers twice
to be sure, you knew you were close. Lots of really deep TV broadcast
antenna stuff they didn't teach at Fort Monmouth.. But I got the Second
and the Extra on the first try (Extra after the General and Advanced at
the same sitting).

By golly I believe you've hit on it. Ed is the most popular man in the "room" and Larry possibly the most unpopular. The reasons are more than clear.

Ayn and Larry and Ed have made the point far better than any of the rest.

Many things are relative, my friend. Something can be harder than one thing, while simpler than another. As Ed points out, the written tests today are harder than they once were. But those written tests were not dramatically changed by restructuring, while the code requirement was. And, in that one regard (the code requirement), it is easier to obtain those additional operating privileges today.

And you're misrepresenting what I said. My comment was about the recent changes in the code test requirements, not about the topic you're discussing with Ed (the differences between the written test today and the written test in 1963).

Oh, I have the perfect story for that. I once had an associate with almost the exact same attitude. And we were once in a near similar situation. He was in town for an important final job interview with the executive manager of a company (almost double the salary and a pile of benefits).

After his long drive that day, we went out for an evening meal at a local restaurant. My friend, in a tired mood, loudly told a guy in the next table to shut up because he was laughing too loud. The guy was not laughing any louder than anyone else in the room, but my friend was in a bad mood (and, when he was like that, he had the habit of taking it out on others - it made him feel better, just like it did that night as he laughed at the other guy's embarrassment).

Well, the next morning, he went for that job interview and you can certainly guess the outcome (why else would I tell this story). That's right, the guy sitting across that desk was the same man from the restaurant the previous night. Of course, I probably don't have to say that my associate didn't get the job.

I never saw my associate after that day. I know he had his old job for several more years. And, the last I heard, he had been arrested for severely beating his wife (he wrote me asking for money to aid his

defense). I never sent him any money. I figured he was probably right where he belonged.

And, with that, you hit on the exact problem. Many situations are made far worse because people are simply not prepared for something bad to happen. And the impact of nearly all bad situations can be reduced with just a little preparedness.

Anyway, since you mentioned water rescue, and Phil used your message to promote the Power Squadron, let me also point out that the Coast Guard Auxiliary has a number of classes for those interested in boating and water recreation - seamanship, navigation, weather, safe boating, using the GPS, water safety for kids, and many others. In addition, those who join the Auxiliary can receive CG training in search & rescue, radio communications, and so forth. If anyone is interested in any of this, feel free to contact me by email.

I would tend to agree with your assessment. There is, however, a big
difference between 'laughing too loud' and standing on you chair bellowing
across the place.

1944. Re: Morse Code and the disabled...

From: "KenF" skydiver94@home.com

>So, on to my specific questions:

>1) Would her inability to communicate verbally keep her from getting a HAM
>license?

Absolutely not. It sounds like she will pass a Morse code test easily, although because she will be unable to write down what she hears sent, the VE team may have to devise a test with a reasonable accomodation for her disability. One example might be for them to send the text one sentence at a time and ask the question about the content of that sentence. (Ie, what is the call sign of the ham who is making the transmission?) She would probably answer in Morse code. Of course, in that case, the VE team would have to be up to speed themselves on the code, but that really shouldn't be too much of a problem. :-)

She will also have to pass the written exam, although not necessarily by writing. I imagine that the VE team would read her the questions on her exam and she could then respond A, B, C or D in Morse, and someone from the team would write down her answer. If she has >75% right, she passes.

Once she is licensed, she will be able to communicate with other hams on the air using Morse code or other computer-controlled digital modes, if she likes.

>2) Are there any HAM PC interfaces that would allow her to communicate
>through her computer since would be unable to tune a HAM radio manually?

Yes there are. Most of the middle-priced transceivers today have a computer interface that can control the operation of the rig.

>3) Assuming there is such an interface, would it be able to send morse code
>directly, or through a translation interface?

The computer-controlled transceviers can also be keyed through the control port, if memory serves. An alternative would be to build a simple keying circuit that takes an external audio Morse code signal and turns it into the keying signal for the rig.

All in all, these sound like surmountable problems. Once she is licensed, I will be glad to help work out answers to the challenges. In the meantime, if my help is needed at working out the details of any of the reasonable accomodations she may need to take her tests, let me know. The best address to use for me is w1rfi@aol.com or by phone at 860-594-0318.

Please pass along my best wishes to her in becoming a ham.

>Steve, I'm told that, at the click of a mouse button, your newsreader
>allows selection of "standard" style quotes or "AOL" style quotes.

Actually, Cecil, to be exact, AOL calls it "Internet" style quoting. It doesn't exactly say that it is a standard, but to me it implies that it is used extensively on the internet.

And it does get most of the attibutions just right, but does so in a really stupid way. It requires that one highlight the text of the message one wants to respond to, then t puts a > in front of every line, including the first line. To conform to the standard method used by virtually every newsreader and poster, an AOL user has to at least remove the first > from the >From: poster@blatz.com line at the top.

Perhaps the easiest thing to do is to drop it, Cecil. I am sure that Steve will start remembering to remove the > once he no longer feels he has to make the point that you can't tell him what to do on usenet. After all, he probably wouldn't want to continue to appear foolish.

Frankly, I think both sides of this are a bit foolish and not really a good use of everyone's time. Do you think you could both be persuaded to take this petty squabble to private email?

I don't know. Larry calls it "status" and then uses it as a stick to hit
others on the head and as mud to throw in someone's face. Dick calls it pride,
then does the same thing with it. Somehow, I do not see using weapons against
others or throwing mud as having much status or pride.

"Real" pride and status are felt in the heart, and those that really have
either treat pride and status with dignity and respect.

Of course I believe that radiated power varies inversely as the square of the distance, Dick. That is how I know that you got the answer wrong. The correct answer is that the electric field will be at half the value if the distance is doubled. Almost everyone taking today's General tests knows that, Dick.

I wonder if dpfrench feels I have not said anything unkind about him. Dp?

Now, as to these imaginary infractions, do you think he might imagine that you called him an idiot?

What I want to know is how you can, with a straight face, express displeasure with my "chasitsing" you in the same post where you call someone else an idiot. Can dish out a LOT more than you can take, eh? Would my words go down better with you if I were to just call you an idiot instead of disagreeing with the content of your posts?

>How about a little courage on your
>part by way of letting dipschitfrench know that he doesn't, after all,
>know it all?

I have already done that, Dick, and if you want to see it, you will have to follow your own standards and not be lazy and go search the archives.

At least you didn't chastise him, though -- you reverted to petty name calling just like he has. I guess that is okay, as long as no actual content is discussed.

Do what I did and send a donation to the real scouts, the Boy Scouts of America. I, like they, do not accept, and will not be forced to accept, your immorality.

Freedom works both ways. Freedom to say homosexuality is a perversion. Freedom says I do not have to accept your perverse way of life. Next thing they will try to get us to accept are pedophiles. We'll be told those people are born that way and can't help it so that behavior is perfectly acceptable. One perversion after another, yada, yada, yada.

> them as being all the more lazy and disaffected than any hams who have
come
> before them.

True, I can read, and do, but if there is some reason I do not understand a certain concept or whatever, where the hell do I turn to for help? If I can't find a piece of information or fact that I need to know in regard to radio, where do I turn to? Hopefully under the spirit of amatuer radio, we could turn to these for help. Did every single person who tested in the above paragraph not have one ounce of help from someone else? I DO NOT believe other hams should HAVE to train other hams from a point of zero knowledge all the way through the extra class, but is asking for "some" help such a bad thing? Or is it that they just don't want to be bothered?

It is the very lack of willingness to open a book, learn something
> on their own, to show some curiosity and learning ability, that has hams
of
> my era looking down their noses at hams of your era. Quite frankly, there
are
> more than enough people populating the local repeaters, thank you very
much!

Hmm.... except for drive time, our repeaters around here are silent except for net operations. I used a program called scanner recorder and recorded a

24 hour period of time on 6 different days in the past six months and the average transmitting time of the repeater in my own city was 37 minutes (excluding the thursday nite net) per 24 hours. And most of that was the ID's and time statements. And good luck on simplex too. I have tried on about 100 different times in the past year to establish a simplex contact. No luck there either. Even if I manage to finally pass the CW test, I still won't be able to afford to get on HF anyways. Working between 80 and 96 hours every week I just don't have the time to sit and try to build something cheaper. Maybe in 30 years when I retire......

>
> 73 de Larry, K3LT
>
>
> Right, I believe the recent (past 10-15 years or so) experimental and
digital modes need to be looked into.... I am also a strong proponent of the
emergency communications which is the main reason why I got involved with
amateur radio in the first place. I am an active member of our local ARES
and RACES group, participate and run public service nets and skywarn nets,
am working on a grant to equipt all the volunteer fire stations in my county
with 2m/70cm capabilities, participate in public events like the MS walk
etc.

I guess what I get tired of hearing is that "old-fart" mentality about all of us who didn't have to walk uphill barefoot in 2 foot of snow both ways bitching all the time and maybe help them get to what they see as at least half as good as them. If it makes them feel better, I will walk to Detroit from Midland (about 90 miles) for my next exam session, and test under any method they feel may be the "perfect" method of testing. How about essay form for each question?

Ryan

BTW... I do support the former code requirements, even if I could care less about using the mode of communication.

Thanks.... who knows.... had they accepted it back then, I might have
actually gotten even better and actually love CW now. I am giving it a
couple more tries (on top of the 9 or so tries) and if I don't get it....
don't know if I will try again. At least I gave it a valiant effort.
Would love to send in my CSCE for general etc. before they expire.

Thanks for your support.

I agree.... with less and less test sessions being available, one may have to drive a distance to get to a testing session. Another valid point that needs to be addressed is the hours that things are done within amatuer radio. Why the hell is everything in the early morning? Not all of us are old farts that are up at the crack of dawn.... (some old farts I know even stay up late at night too) Some of us work second or third shift. What is wrong with an afternoon test session or other event? With many of us that are in the hobby and still in the workforce having to work multiple jobs, things are just not like the 50's anymore.

Well, if 10m is the only band that a rig can be single-banded I guess that I will be screwed here for quite some time. It will be 5-10 years before I will ever be heard on HF, unless I am working with someone elses station. I still think that a Multi-mode, single band rig for some of the other frequency bands would be nice. Who the hell has 800 bucks at one time where it wasn't immediately need for bills or emergencies? Wish I did....

Yea I know, it sort of made me mad that I didnt Memorize the Freqs an Extra was able to use, but still not bad not knowing anything about what was on Test. The test really was a Joke. I couldnt believe the Stupid Questions, the Novice was harder than the Extra.

Several - all dependant on radio brand/model. Most manufacturers of
medium to high end HF gear offer PC interfaces - some radios are
completely controlled via PC interfaces.

>3) Assuming there is such an interface, would it be able to send morse code
>directly, or through a translation interface?

Her choice. Most CW operators use paddles instead of a straight key.
Slap the paddle to one side, you get a dit. Slap the paddle to the
other side, you get a dah. Sound familiar? Doesn't take much to
imagine that your girlfriend can send CW directly to the radio. There
are also several dozen programs that will generate CW from your
computer keyboard.

>--
>cheers, Ceci

No, I would say the Extra was just a Stupid Test, there was nothing on it that even took any thought, I even went back after taking the test to compare the Novice with the Extra of today,the Novice really
was harder, or at least it had more Technical questions.
Good example, what is Grayline propagation, or the really tough one, who can be a control operator, WOW some really Tough Material. As I said the Extra TEST was a JOKE.
What was even funnier was when I finished the Test, 1 of the VEs actually said ,I bet your glad thats over now you can free up 40% of Brain Power, and my comment was you are kidding RIGHT. And of course his next comment was, well lets wait and see what the Test Results are, and my next comment was if I missed more than 1 you need to recheck your Answers. WRITTEN TEST A JOKE

I have wondered the same thing. I would also like to know all the test sessions are on Saturdays for the most part. WHy not Sundays. Also, Why do all the swaps start at 6 AM. What is wrong with say (AM. It would make it easier for hams that are not close to the swap. It would also be nice to see a ham radio swap with ham radio gear for sale, insted of a bunch of computer crap that is not worth anything.

>Absolutely not. In fact, ARRL asked the FCC to issue a declaratory ruling
>that
>would have deemed operation outside the recognized band plans to be in
>violation of the requirement to use good amateur practice in our operating.

Then someone had better pass that on to Mr. Hollingsworth. He has
repeatedly stated that voluntary band plans were the gauge by which they
determine wether or not a staton is operating within good Amateur Practice.

Is this a "cast in stone" policy...?!?! Certainly not. However a review
of the many "enforcement" letters by the FCC, published on the ARRL's website
specifically cite failure to observe good Amateur Practice as the causal factor
in the initiation of proceedings.

>The FCC refused to do so.

True. However Part 97 STILL states stations must be operated in accordance
with good Amatuer Practice and that failure to do so is inappropriate.

>>Those "standards" ARE documented and ARE protected by federal
>>regulation.
>
>Absolutely not.

Don't say "absolutely" and you come closer to the truth, Ed. I again
refer you to the numerous FCC letters that have recently appeared on the
League's website and that "good Amateur practice" is cited frequently.

I think it's normally presumed that there is motivation or intent to deceive involved in a lie. From that definition we can only assume it matters less whether the speaker believes the statement to be true or not. On usenet, the intent is more to make a point of debate than to deceive.

I thought you said you didn't know anything about AOL newsreaders.
When I use Outlook for email, it automatically puts that bulky header at the
top of a quoted email message. But when I'm on the newsgroups, it looks
like it does above.

That has more to do with interference than anything else. There's no
legal reason why I can't run RTTY in the lower 25khz of 40m as long
as I choose a clear frequency. I wouldn't do that but it isn't illegal.

Jim Kelley wrote:
> I thought you said you didn't know anything about AOL newsreaders.

I didn't until I received a couple of emails which alleviated some
of my ignorance. Apparently, in addition to the standard AOL attribute
function, AOL added a selection for the standard Internet attribute
function which can be selected with one click of the mouse button.
Question is, why doesn't everybody using the AOL newsreader on
Internet Netnews make that one click of the mouse button and
solve the attribute problem?

In the 60s when I was still a Teenager,it also was a boring test not much challenge there. As a matter of fact now that I think about it, none of the Ham Tests were Challenging, aced all of them accept that stupid Extra Test, but that was my fault, if I had really been interested I might have Memorized those Freqs.

I do agree that accomodation here would have to be done, but it also needs to
be done in a way that doesn't violate the integrity of the test. Because of
the high degree of accomodation that may be needed, you might want to also ask
the FCC. Don't forget to call the testing group ahead of time so they can have
extra examiners on hand.

>>2) Are there any HAM PC interfaces that would allow her to communicate

Incomplete answer: If she can control a computer (e.g. running Windows) and
the mouse pointer, then such software for controlling a radio then becomes a
feasible solution.

My dictionary says:

"lie - 1. to make an untrue statement with intent to deceive 2. to
create a false or misleading impression"

"lie is a blunt term, imputing dishonesty. Prevaricate softens the
bluntness of lie by implying quibbling or confusing the issue.
Equivocate implies using words having more than one sense so as to seem
to say one thing but intend another."

Prevarication and equivocation would seem to be popular activies around
here. ;-)

>(satellites and other methods may well leave HF looking rather poorly.

Not wanting to beat a dead horse, but he's such an inviting target:

I just don't think microwaves hold much for the Amateur Radio Operator.
There are probably no great discoveries to be made there such as the
opening up of short waves many years ago. Microwaves have been studied
to death by very well-equipped labs over the last 50 years. They have
enormous potential... but not for hobbyists.

Time will tell. I predict a steady erosion of Amateur microwave use and
a steady increase of commercial uses. I could be wrong. We'll see.

You need a new dictionary, Jim. From Webster's Ninth New
Collegiate Dictionary:

"lie - 1. a : an assertion of something known or believed by the
speaker to be untrue with intent to deceive *b : an untrue or
inaccurate statement that may or may not be believed true by
the speaker* 2 : something that misleads or deceives. 3 : a charge
of lying." "*"'s added for emphasis.

My "Webster's New Universal Unabridged Dictionary" has too many
definitions to type but here's the one I have been using:

"lie - 3. an inaccurate or false statement"

So you see, I have a perfect defense against Steve's lawsuit where
he says I libeled him by calling him a liar. He proves himself to
be a liar by not even knowing the definition of "lie". :-) A person
is lying, by definition, if he doesn't know the definition of "lie"
and makes a false statement thinking he does know the definition.
It's virtually impossible to defend an indefensible position. :-)

Of course, I certainly hope Steve reads these threads. Steve's AOL email is so screwed up that my Netscape Messenger cannot handle a reply. In fact, the AOL email is even more screwed up than the AOL newsreader.

> You posed the question. Was it rhetoric for the sole purpose of
> rhetoric?

It was a rhetorical question, Jim. Only a fool would choose to violate the Internet standards when a mouse click will solve the problem. I personally don't think Steve was serious and was just trying to pull my leg back while I was pulling his. With so many violations of netnews rules, what difference does an attribution make? (Again - rhetorical)

With you knowing me as well as you do, Jim, I would be surprised if you didn't recognize my tongue-in-cheek humor at work.

Well, think about the number 2 definition above. It doesn't require
that the perp know that he/she is creating a false or misleading
impression. He/she can be lying out of ignorance. All that is
required is that a false or misleading impression be created.
"The earth is flat" is a lie no matter what the speaker believes.
Ain't English fun?

>certain concept or whatever, where the hell do I turn to for help? If I can't
find a
> piece of information or fact that I need to know in regard to
>radio, where do I turn to?

There are a number of places. Not all old timers are so down on ham radio as a few of the ones here are, and not all old timers label those who are trying to help newcomers as "politically correct." Those who act this way toward other hams, whether old timer or newcomer, are not practicing the ham radio I have known for three and a half decades.

There are plenty of hams out there who will gladly offer encouragement and help to the newcomer. You may be able to find some such help at a local radio club, or on the local repeater or otherwise on the air. ARRL has a field organization of volunteers -- one position within that organization is the Technical Coordinator, and his/her Technical Specialist assistants. These people have volunteered to help with technical questions in their sections. You can also email tis@arrl.org and Al will usually be able to answer nearly any question.

>Did every single person who tested in the
>above paragraph not have one ounce of help from someone else?

I can't speak for every single person who tested when I tested, but my friends and I had a lot of help from the old timers, and we made plenty of mistakes. I still make a few to this day, and I am sure I have a few more coming. :-)

>I guess what I get tired of hearing is that "old-fart" mentality about all
>of us who didn't have to walk uphill barefoot in 2 foot of snow both ways
>bitching all the time and maybe help them get to what they see as at least
>half as good as them.

Those that really do have confidence in themselves and their abilities have no need to favorably compare themselves obsessively in public to others. There are plenty of hams with more knowledge than I have and I respect them for it. In that way, I am more likely to learn.

Many VE test sessions are held in the evening or at conventions and hamfests. I have seen many a test session in the afternoon. Most of the time, if one is held in the morning, you do not have to be there when the doors open. I somehow think you can manage to get up before noon at least once in a while. :-)

If you do work 2nd or 3rd shift, mention this to a few local VE teams and I bet you can persuade one to do an evening test session now and again.

> Ain't English fun?

"The earth is flat" is simply an incorrect statement. According to
Mirriam Websters Collegiate Tenth Edition, the story teller must have
the intent to mislead or deceive in order for it to be a lie.

To me a lie is a deception. If you want to be able to call someone a
liar simply because he was under the wrong impression about something,
then by all means libel away.

Actually, Cecil, he has selected internet style quoting. AOL style quoting
would do this:

<This is the text that the newsreader is quoting.>

He is just not willing to edit out the > that AOL inserts before all quoted
text, including the From: line at the top of the posts he responds to. I think
it is now a matter of principle that he wants to prove to everyone that you
can't tell him what to do.

Yeah. I saw an episode of Spy TV. This guy, masquerading as a basketball ref, came out onto a court where some guys were playing a pick-up game. He started blowing his whistle, calling all sorts of bogus penalties, interfering with play, and generally making an a$$hole out of himself. Nobody asked him to referee, and none of the people there thought it was funny. He just mad them angry and started fights. Is that your objective?

Either email me or post here with an indication of what seems to be getting in the way of passing the test. I can offer some pointers. For some that are trying to learn the code, it really is a difficulty in aurally distinguishing dits from dahs. In that case, I suggest that one stay with A, N, R and K until they overcome that hurdle. What tends to happen is that all of a sudden, the mental connection is made and learning proceeds smoothly from there.

In other cases, those pesty numbers or the more "difficult" letters are the problem. I can think of no real way around that except for practice.

Let me know if I can help. All I will ask in return is one CW QSO sometime after you pass! :-)

That's a lie, Jim. "To create a false and misleading impression"
doesn't require "the intent to mislead or deceive". All it requires
is that it be a false statement. The creation of a false and
misleading impression can even be accidental. It's still a lie.

After this much time I can no longer quote which, but I know that it would never have occurred to me to disallow a passing score by one minute solid copy when the FCC has always used that as the SOLE criteria.

Point is that the FCC no longer is in control of the testing process.
The VEC can decide what constitutes a pass and maybe the VE team
can do likewise.

Dwight:

That's quite understandable; the ham radio licensing standards have
been dumbed-down to the level where even you can now enjoy full
amateur privileges. If I were you (whew!) I would be enjoying it as well!
And no, I don't have any problem with you enjoying your privileges!
You waited for them long enough. I'm just glad I got mine 18 years
sooner!

Yeah, I noticed that when I declined to take the bait. That's why I said what I did, thought I should have noted the difference in the E field and power density. Looks like a semi-'trick' question to me, and yes I know there were some on the tests. When you're working them for a score you must note carefully and exactly the wording of the question. I wasn't working for an answer, just making an observation. Ed doesn't lead me around by the nose, as he has surely noticed by now.

How are you going to prove you are an upper caste ham without
a callbook after you renew next time? Before you say there are
no castes in ham radio, note that is exactly what you are doing.
There is no way for hams getting their licenses now to equal
your perceived top status. When people are barred from achieving
top status no matter what they do, that's a caste system, Larry,
pure and simple.

Any test is a joke if you have been given the exact answers on a silver
platter well in advance of the test date so as to learn all the word
associations needed to match an answer with its question with no need
to learn anything about the content of the subject matter. It merely
taked the necessity to learn out of the process.

Gee, I dunno, Ryan. All the years I ran a VE team we tested at 7pm on Tuesday night, and I can't tell you how many of those Tuesday nights I was up till 1:30 or 2am doublechecking and finishing up all the paperwork invoved with the test session so it could go into the morning mail. And I was up at 6 and off to work myself. For I, too, was still in the workforce...

Anyone who doubts it needs to check out a little history. Not that long
ago hams had all microwave frequencies. What small amount that remains
is again under threat, and I believe we'll be lucky to ultmiately hold 2
meters and half of 70cm.

A person would be a "real" ham, regardless of what ham license test
he passed.

Your perception is screwed up, Dick. In 90% of the code discussions, it the the anti-code crowd responding to nonsense posted by pro-code crowd, not the other way around. For example, this latest round of the code debate was started by the monthly "no code = no ham" message. The "codebashers" didn't post that message. And Larry started the 'real ham," "restructuring," nonsense in this thread (Aug 17th). Are you calling Larry a "codebasher?" If you don't want "codebashers" coming at you (and the rest of the pro-code group), urge your fellow pro-coders to stop provoking it.

It is the same way around here, and I know exactly what the problem is (around here anyway). One one hand, you have people talking about how the ham radio frequencies are under used, and how we may lose those frequencies if we cannot get people to use them more, while, at the same time, you have higher class operators berating Technicians whenever they get on the repeater and say something the higher class operators don't like. I've seen it happen over and over in this area. It's to the point now where most of the Technicians in this area will not talk on the radio to avoid being bad mouthed by some clown who thinks his higher license class gives him the right to dictate what others can and cannot say.

Same thing happens here, and it only takes two or three to conduct this "campaign." The really odd part is the hams that do that probably believe that they are somehow saving Amateur Radio. I think the end result speaks for itself to prove them wrong.

My perception is that there is a lot more tooth and claw coming from your direction than any other. I, too, corrected Mr Drpfrench in his view of the usefulness of code, but I did not share your need to continue to hit him on the head and throw mud in his face. Your statement is just another version of, "Your honor, she *made* me beat her." You have attacked people you don't even know, so don't give us this tooth and claw nonsense.

> Yeah, I noticed that when I declined to take the bait.

Dick, you didn't decline to take the bait, you answered the question, answered it wrong, then snidely told me that it was my problem if I didn't understand why you were right.

>That's why I said what I did, thought I should have noted the difference in the E
>field and power density.

In my opinion, you didn't understand the difference between a radiated field from an antenna and the resultant power density.

> Looks like a semi-'trick' question to me, and
>yes I know there were some on the tests.

It was only a "trick question" because you lacked the technical knowledge to understand it.

> When you're working them for a score you must note carefully and exactly the
> wording of the question.

You need to understand and use terms precisely when you are "working them" to get the right answers in real-world engineering, too.

>I wasn't working for an answer, just making an observation.

When I read your post, it looked like an answer to me.

>Ed doesn't lead me around by the nose, as he has surely noticed by now.

Surely you can't think this was about you, Dick. You sure can be quite a character at times. You can squirm all you want to try to claim that you really didn't intend to answer the question, but that "superior knowledge" that you claim you have left you with a bit of egg on your face on this one.

Ever consider going into politics? The post you just made ranks right up there with "it depends on what the word 'is' means."

Seems to me the AOL programmers didn't implement the "Internet Style"
quotes correctly when they added that patch to try to make it
Internet compatible. Or maybe that's as close as they could get.

I doubt it. We were given all that spectrum simply because no one else had any use for it, and there might be a few hams who would experiment and come up with uses for it. There were no satellites or any of the many other routine applications in place today. The least need for that spectrum today is the amateur radio service. Why should we expect to keep it?

A little off topic, but that's ok.

I always use 146.52 simplex on the road mostly out of curiosity and I get about one response out of maybe 10-15 CQ's. Somehow, I like the random simplex QSO better than using a repeater.

I wonder if my calling CQ instead of just saying "monitoring" puts off some people?

No, it was a semi-trick question because you *made it to be* a
semi-trick question, deliberately. Just as the FCC sometimes did on
tests.

> > When you're working them for a score you must note carefully and exactly the

> >I wasn't working for an answer, just making an observation.>

> When I read your post, it looked like an answer to me.

Yeah, because you *wanted* it it to look like a WRONG answer so you
could use it to citicize me. Only a League functionary doing his thing

could ever expect to take a QUESTION-which is exactly what my post was- and twist it into a 'wrong answer' to suit his purposes, ie to use against a detractor.

If you were interested in imparting information regarding the decreasing RF field as a function of distance, you would word and phrase it such that the information was accurate and applicible, not some peripheral aspect of it such as using only the E field portion. I know, the E field is a part of it. But the diminishing RF field DOES reduce as a function of the square of the distance, of course you know that. And that was the object of my QUESTION that was NOT AN ANSWER to your 'problem'. But we all know that your primary goal is not to inform, rather just to slam detractors. We got it. You are a prime League bureaucrat, through and through, your protrestations to the contrary notwithstanding.

And now you'll say "Why should I want to do that?" Yeah, *why* indeed. I'M NOT PLAYING YOUR GAME.

Tell ya what Ed- I was working those sort of problems for the Signal Corps while you were hanging out in the Woodstock haze with the rest of the "ME generation" irresponsible. No, I don't do many of them these days. But you can be darn sure if I decide to "work" that or any other technical problem I *will* get it right, from research if I don't remember the details necessary. I have plenty of resource material at hand and I know how to use it- and DO. So get off your nonsense kick and stop attempting to "lead" the discussion. You are not the leader here. There is none. Your attempts to slam me are failed. Get over it.

And may I suggest that you go soak your head?

Your premise that ham radio applicants relish the idea of learning
enough electronics to pass a 1000 question (potential) exam is
ludicrous. What they REALLY want to do is pass the test(s), usually one
at a time. So they "study the tests"-one at a time- with all the exact
questions and exact answers, with the primary view that matching the
answers with their questions is the way to pass that or any test. If it
is made much easier by the fact that the questions and answera are
provided, why not take advantage of it?
Only those who hide in caves -or have some reason to refute the facts-
could assume otherwise.

No. It's a quote.

>"To create a false and misleading impression"
> doesn't require "the intent to mislead or deceive". All it requires

The impression is either created by the teller, or it is created by the
person being impressed.

I disagree. But if you like, I will in the future refer to your
disingenuous prevarications as lies.

Yeh, and he didn't keep bashing you either, did he? I have no idea
where he came from, he just showed up with his crap. He can go back
anytime.

Your statement is just another version of,
> "Your honor, she *made* me beat her." You have attacked people you don't even
> know, so don't give us this tooth and claw nonsense.

Bullhockey. I 'attack' no one except the ARRL and the FCC for their
allowing ham radio to slide into status that would more accurately fit
CB. Any other perctption is merely that- your perception.
This nonesense has been in progress for years and shows no sign of
abating, given the propensity of the dingaling class line Frenchy to
keep arriving with their stupidity.

And that was the decision of the VEC Cordinating Committee, not that
particular VE team. Any VE team making that sort of rule on their own is
in violation.

> And may I suggest that you go soak your head?

Err, I'm sorry, but I just have to post here.

As a currently unlicensed guy who is going to go for an Extra in
October (and yes, I'm studying; not just memorizing the answers in the
back of the book), I take some serious exception to your attitude.

While you criticize those of us taking the, ``new'' exams, has it ever
occured to you that maybe the exam isn't the ultimate test of one's
knowledge of radio? Whose to say that once I pass the exams (assuming
I do pass) I'll stop trying to learn? I think, frankly, that that's
pretty presumptuous and rude.

What's more. You speak of your Army Signal Corps days, and the
training given to you there. Fine. However, with as sophisticated as
today's radio equipment has gotten, do *you* really understand how it
all works? The theory behind it? Consider a microprocessor controled
radio; can you explain to me how the uproc works? Can you tell me the
difference between a branch and a jump instruction? What is the
fundamental function of a DSP?

How about some of the packet modes? Can you explain to me the queuing
theory that goes into congestion control in a dynamically routed packet
switched store and forward network?

Here's an example question: How does congestion increase as the number
of stations on a non-switched, non-tokenized, simplex network
increases?

a) Logrithmically
b) Linearly
c) Quadratically
d) Exponentially

Can you answer that? It's directly relevant to packet radio operations. If you can answer it, I've got a few more that I'd love to ask you.

My point is this: It's easy to sit back and say, ``these kids these days....they don't work hard.'' But, bear in mind that your father's generation probably said the same thing about your generation. And did you work hard? Quite possibly. We work hard too, just at different things.

It really gets under my skin when a guy who most likely doesn't understand the first thing about computer science tells me that I don't know anything technical...all because I'm taking an exam he doesn't consider ``hard enough.'' Give me a break; that test doesn't prove anything except that I met the FCC requirements to get a license. If you *really* want to know what I work on, send me an email, and I'll be glad to fill you in. I doubt you'll keep up, though.

Even these 1960's exams you're going on about probably didn't prove anything other than that I knew enough second semester physics to meet the FCC requirements and get a license.

I mean, if you're like this on the air, and you're representative of the type of people I'm likely to encounter, I'm not so sure I want to bother with ham radio; what's the point? To be insulted by someone who arbitrarily thinks he ``knows'' better than someone else?

Well, that's really all I have to say on the matter.

- Dan C.

This has been a long conversation. If you really feel the need for
authority here's a working draft for an Internet Engineering Task
Force standard:

http://www.landfield.com/usefor/drafts/draft-ietf-usefor-article-05.txt

You might look at section 4.3.2. The IETF develops and maintains most
Internet protocol standards, and their documents can be cited in ANSI,
ISO and ITU standards, at least. They even have representation at
the ITU when anyone bothers to go (I once went to an ITU-T meeting on
their behalf).

Here's some other documentation. The first is a lot easier to read.

http://www.netmeister.org/news/learn2quote1.html
http://www.faqs.org/faqs/usenet/software/good-netkeeping-seal/

Most of this could be deduced by observing the behaviour of most of
the people posting, or their software at least. I think I've gained
an understanding of why people think subband mode restrictions are
necessary in the US regulations even though most of the rest of the
world gets by with nothing more than voluntary bandplans.

Then you disagree with the dictionary which is your right but
not very conducive to communications.

From Webster's: "lie - an inaccurate or false statement"

"The earth is flat" is a lie even if the speaker believes it.
Every time you make an inaccurate or false statement, you are
lying. The only defense against being called a liar is proof
that your statements are true.

Of course, and thats why 2 and 440 are probably gone before long. And how about that line of BS, that was told to us about the No-Code, and VHF, how they were going to save VHF from comercial groups, didnt believe then, and dont believe it now, about as much Bull on that one as there was with Restructuring

Not necessarily. The dictionary doesn't say that ANY inaccurate or
false statement is a lie. It says that a lie is a inaccurate or false
statement. A false statement can be a lie, but it isn't necessarily
one. The definition is for the word lie, not for the words 'false
statement'.

> Every time you make an inaccurate or false statement, you are
> lying. The only defense against being called a liar is proof
> that your statements are true.

I disagree, and so does the Tenth edition, which says "to make an untrue
statement with intent to deceive". If you don't like it, go argue with
Webster.

Aha, selective quoting of the dictionary again. When are you guys
going to learn? *Any* dictionary definition of a word is acceptable,
not just the one definition of your choice. You, yourself, posted
this definition for "lie - to create a false or misleading impression".
Nothing specified about motive. You could accidentally or ignorantly
create a false or misleading impression and you would still be lying.

Depends on your definition of create, and who is doing the creating.
The intended definition means that the teller intends deliberately to
create a misleading impression - rather than the impression being
created in the mind of the listener, as you seem to imply.

Calling someone names does not make the namecaller a liar. One can
after all express ones opinion without being a liar. People that go
around calling people liars usually have some kind of sociopathic
problem. Are you looking for an excuse, Cecil?

The ITU-R study group (this is not IARU, but official ITU) has
issued their new recommendation for amateur radio operator license
qualifications. (This is not adopted yet, only a recommendation.)

They recommend:

---

1 that administrations take such measures as they judge
necessary to verify the operational and technical
qualifications of any person wishing to operate an
amateur station;

2 that any person seeking a licence to operate an amateur station
should demonstrate theoretical knowledge of:

- Radio Regulations
..... international
..... domestic

- Methods of radiocommunication
..... radiotelephony
..... radiotelegraphy
..... data and image

- Radio system theory
..... transmitters
..... receivers
..... antennas and propagation
..... measurements

- Radio emission safety

- Electromagnetic compatibility

- Avoidance and resolution of radio frequency interference.

Note that the language of paragraph 1 allows administrations to
continue Morse testing if they judge it necessary.

With all kind wishes,

de Hans, K0HB

Huh? A quick ULS search shows over 3000 licenses of type HA granted since
6/1/01. I can't imagine all those are upgrades, and vanities are HV.

Here we go...since 8/15 finally gets it down to a number the ULS can count
to...2355 licenses granted. From looking at the calls, it appears they're
maybe 1/3 upgrades.

Anybody who hasn't already taken those words to heart hasn't had to change a tire on the side of a 2-lane road at 1AM on a night with heavy fog, no flashlight, and no flares. Of course, this will always be a tire on the traffic side of the car, unless the curb side is 3" from a bridge rail.

The only light you get is from the cars you need to dodge.

Needless to say, KD5OUY is now under orders to keep flares and at least two flashlights (a glovebox sized one, and a big rechargeable with a 12v adapter in the trunk) in her car any time she expects me to fix a problem with it.

Well, if any SOS or other emergency message comes
your way, stay calm, and do it in a LOGICAL order
to get the info you need.

That means, the FIRST thing you ALWAYS get is
WHERE! Not who, not what, not when, but WHERE.
If communications break down, knowing where means
someone can investigate. THEN worry about the
what.

Bottom line is try to get all the info you can, but the
'where' transcends all else in importance.

Hey, it's like an E911 hangup. Someone can dial 911,
not say a thing, not even complete the call in some
cases, but help will be on the way. Maybe the wrong
help, but that can be corrected later. ALWAYS get
the WHERE first!

Mike

You are reading far too much of your own personality into that definition,
Jim. I don't see "deliberate" mentioned any more times than I see
"accidental" mentioned.

> Calling someone names does not make the namecaller a liar. One can
> after all express ones opinion without being a liar.

If the opinion is false, the person is lying, by definition. You last
sentence above is a lie, according to Webster's. "lie - an inaccurate
or false statement".

I'm afraid it is you who is being creative with the definition, Cecil.
The dictionary says that a lie is a false statement. It does not say
that a false statement is a lie. "What is it about" [set theory] "that
you don't understand?"

> If the opinion is false, the person is lying, by definition.

Wrong. One can only infer that if a person is lying then their
statement is false. You cannot legitimately infer the converse -
particularly since the meaning is explicitly stated in definition 1. of
the Tenth Edition.

If a liar is someone who tells, or has told "lies", then wouldn't almost
everyone by your definition, be a liar?

First off.... the numbers and punctuation really throw me.... I have heard tricks for those but I still "don't get it" yet for those. There are about 4-5 letters that also throw me too. I seem to have good chunk of the letters down though.... Wanna know how I got from a few letters to about 20 letters? Believe it or not, sending as opposed to trying to recieve. Maybe with some more practice I will have the numbers etc. down also.

Since you're talking about the subject, let me interject a couple of questions while I have the opportunity. A lot of people today seem to want to apply evil intent to those years ago who insisted the world was flat (they were trying to keep people ignorant of the truth, or whatever). However, I just don't see that. What I see instead is a simple misunderstanding of the world around them (the very limited world they knew at the time), and doubts about the evidence that tended to show that the accepted ideas about the world were wrong. And even that should not be unexpected - people do tend to hang onto what they think they know, in spite of evidence that might show otherwise.

Anyway, without getting into a huge debate (the reason I've avoided asking these questions in those other discussions), why would people see evil intent in these simple historical misconceptions? For that matter, why do so many people want to see evil intent in just about every major event in history (like all history has to be trashed, or something)?

>letters? Believe it or not, sending as opposed to trying to recieve. Maybe
>with some more practice I will have the numbers etc. down also.

I found the numbers to be a bit tough, too, at least the numbers 6-9. 1-5 came pretty easily, because the number of dits equals the number, but 6-9 just took a bit of practice. I understood the system, but at 5 wpm, things are just too fast to count backwards. What I recommend is that you spend a week of your practice time ONLY on the numbers. All of a sudden, they will click and you will wonder why you found them so hard. :-)

As to the letters, more than likely Q, F, L, Y, etc. Maybe another week of ONLY those letters that you consider to be giving you trouble will fill it in for you.

As to sending, I would say that whatever works is fine. If so, though, I would guess that you really don't have the problem letters as well memorized as you might like. And once you think you really have them cold, it would probably be beneficial to switch back to receive only, because that is the test you are going to be given.

The other thing that worked for me was to spend every minute driving and sitting in traffic going over the letters on street signs in my mind, or even out loud. (Just make sure that driving is the #1 priority!) If you do, make sure that you us dit-daaah, to give you the real rhythm of the code.

I presume you are using Farnsworth spacing in your receive practice, at a pitch of about 750 Hz. Farnsworth is the norm at test sessions.

Are there any possible hearing or mental-processing issues with your code copying? If so, asking for a different tone, or a blinking light or mechanical buzzer instead of the normal 750 Hz would be appropriate. Ditto on Farnsworth vs non-Farnsworth. These are generally done as accomodations for medical disabilities on request and if that is the case, the VE team can tell you what they will require for documentation. There are more serious disability accomodations, but I presume from what you have said that those don't apply. Even the ones I mentioned probably don't apply in your case, it does sound to me like a memorization issue, and, unfortunately, that can take time. I have seen people learn the code in as little as 3 days; others have really worked at it for a year, and I *do* mean worked. But I think you are on the right track in looking to upgrade; any changes to the code testing are literally years

away, if at all, and there is a world of fun on HF awaiting. And, once you pass, don't be surprised if you end up liking the code. Some of really do! :-)

You've have better luck than I did on 146.52. In a recent trip across the country (Washington through California, and then I-10 across the southern US), I was only able to make three contacts.

One was a guy in Northern California (just north of Sacramento). This old guy was so drunk, I don't think he had any idea what frequency he was on. The second was a very short conversation between Phoenix and Tucson (real weak). The third was a really interesting station in central Texas. This guy first made contact with me just east of Fort Stockton and continued to talk to me off and on over the next 200 miles. He had to have had one heck of an antenna system to keep picking up my little 5w FM handheld, hooked to a simple external mobile antenna, over that great distance. I was impressed.

Anyway, other than those three contacts, I never heard a sound on 146.52. This was in spite of the fact that my wife and I talked repeatedly on that frequency over the entire distance (we drove two vehicles). I must have asked 500 times for anyone listening to just jump in whenever they want.

>conclude that I worked out the answer and got it wrong. Whatta guy. What
>makes you think that I or anyone else will automatically "work" any
>question you post?

What "work" was involved, Dick? I deliberately chose a question that involved no math whatsoever beyond a simple head division by 2. You must have "worked" something because you divided the 2V/m by 4. You did more "work" than you had to, and still got it wrong, then you are trying to tell us that you got it wrong because you didn't do all the work my question required? Pretty thin ice on that one, Dick. Why can't you just admit that you learned something new and move on?

>> It was only a "trick question" because you lacked the technical knowledge
>> to understand it.
>
> No, it was a semi-trick question because you *made it to be* a
>semi-trick question, deliberately. Just as the FCC sometimes did on
>tests.

In what way? I made it clear in two ways that I was talking about the radiated field from the antenna, both by using the term field strength, and making it very clear that the field strength was expressed in volts/meter. To anyone who understands just what a field is and how they vary near an antenna, it was not a trick question at all.

>> When I read your post, it looked like an answer to me.

> Yeah, because you *wanted* it it to look like a WRONG answer so you
>could use it to citicize me.

It didn't look like a wrong answer, it WAS a wrong answer.

> Only a League functionary doing his thing
>could ever expect to take a QUESTION-which is exactly what my post was-
>and twist it into a 'wrong answer' to suit his purposes, ie to use
>against a detractor.

I don't recall a question in your post, Dick. You said that the answer was 0.5 V/m. And do you really believe that my function at ARRL is to trick you on rrap? Man, that is really getting out there!

> If you were interested in imparting information regarding the
>decreasing RF field as a function of distance, you would word and phrase
>it such that the information was accurate and applicible, not some
>peripheral aspect of it such as using only the E field portion. I know,
>the E field is a part of it. But the diminishing RF field DOES reduce as
>a function of the square of the distance, of course you know that.

No, no, no, no, no! A diminishing field from an antenna diminishes inversely with distance in the far field. The E field is NOT "part" of the E field, it *is* the E field, just like the magnetic field that is radiated by an antenna is the magnetic field. They are related, but either field from the antenna varies as the inverse of the distance. Again, it is clear that you do not understand what a field is. Field strength applies to fields. There is nothing tricky about it.

> You are a prime League bureaucrat, through and through, your protrestations
> to the contrary notwithstanding.

> And now you'll say "Why should I want to do that?" Yeah, *why* indeed.
> I'M NOT PLAYING YOUR GAME.

I guess you can't answer that question either, Dick. But if you really believe that my function at ARRL is to trick you on rrap, I truly cannot help you. I feel comfortable letting those who read my posts here decide that for themselves.

> Tell ya what Ed- I was working those sort of problems for the Signal

Okay, Dick, I'll bite. If ham operators are not supposed to have conversations ("CB-like chit-chat," as your side likes to call it) on the radio, what in the heck are we supposed to be doing with ham radio? If we're only allowed to do is test our equipment, or run contests, than there really is no need for the massive amount of radio bandwidth we have (we could easily do that with just a few frequencies). The FCC didn't give us all this bandwidth for most of it to just sit idle, with the occasional radio check. In the end, if the bands are going sit unused, then I have to agree with those who say that ham radio is nothing more than a huge waste of valuable radio bandwidth. In other words, if your side prevails, perhaps it will be time to reallocate most of those wasted radio frequencies.

By the way, let me add one more thing at this point - what exactly are you doing differently with CW than the Technicians are doing? I've listened to an almost endless number of CW contacts, and all I've ever heard is idle "CB-like chit-chat." If you're so concerned about idle "chit-chat," why don't you start with the "chit-chat" by your fellow CW operators?

>
>I am not asking about a waiver for the Morse Code requirements. I am asking
>if it's possible for her to ONLY do Morse Code.

Ken:

The short answer: Yes, it certainly is. No mode is "required" from
an operational standpoint, although she will have to answer questions
about all modes while taking her license tests.

>She has severe Cerebral Palsy, and has no functional use of her arms or
>legs. She is also unable to communicate verbally.

I have a young lady friend with the exact same affliction. I know
where of you speak.

>Her primary means of communication is tilting her head back and forth to
>produce Morse Code. When she tilts her head left, it produces a dash; when
>she tilts her head right, it produces a dot.

Fortunately, my friend can use her hands to a much greater
extent...she can type quite well with her right hand, and she can even
get out of her wheelchair and walk, with assistance. However, she
can't speak intelligibly -- and I've tried to talk her into learning the Morse
Code to assist her in communicating more easily. The problem with
that was immediately obvious to her -- who would she communicate
with -- besides me?

>This Morse Code is then translated by a computer that she has mounted on her
>wheelchair. She controlls her computer fully by Morse Code, including mouse
>functions. Anything you can do on a computer, she can do too completely
>with Morse Code.

Cool.

>She has graduated from college, and has even earned a restricted skydivers
>license, so she is able to take written tests.

My friend is also a college graduate, but has been having difficulty in
finding employment. BTW -- I am a Paratransit operator here in Dover,
Delaware, and have several clients who have Cerebral Palsy -- all to
a different extent. Most of them are in rehabilitation programs under
the auspices of Easter Seals.

>So, on to my specific questions:
>
>1) Would her inability to communicate verbally keep her from getting a HAM
>license?

Not even a little bit. I have been a ham for 20 years, and almost never
talk into a microphone. I use mainly Morse/CW and the digital modes.
Your girlfriend can be a ham for the rest of her life and never have to pick
up a microphone!

>2) Are there any HAM PC interfaces that would allow her to communicate
>through her computer since would be unable to tune a HAM radio manually?

I'm sure that if they don't already exist, that a good software developer could
come up with it. To check out possible "off the shelf" technology, I suggest
you visit the website of the Handi-Hams organization:

http://www.mtn.org/handiham/

Controlling the radios is no problem these days, since most mid- to
high-end HF transceivers have a computer interface built in. Adapting
the "user" end of such interface through software design is the main
issue in order to accommodate your girlfriend's special needs. There
are no unsolvable problems here.

>3) Assuming there is such an interface, would it be able to send morse code
>directly, or through a translation interface?

Any such device, properly designed, should have both capabilities.

Ed:

I don't believe that we are equal as hams either! As I've said already, you have technical skills far in excess of my own, and I'll be the first to admit it. The fact that you developed these skills entirely within the context of the amateur radio hobby is neither surprising or significant. The fact is that you have them, and I don't. However, you are not one of the people whining about not being seen as equal in "status" due to the fact that they have waited for Restructuring and finally ascended through to full privileges, without having made the effort to succeed under the previous licensing standards. In other words, I have no argument with you. Why are you defending yourself to me?

Ed:

"Politically Correct" means you employ language which deliberately panders to a group of people in whom you seek support for a particular party or ideology, or to gain their vote in order to secure political power for yourself and your party. Your "party" in this case is the ARRL, and your "ideology" is to attract newcomers to ham radio any way you can.

>IMHO, what you have said and done here has permanently
>disqualified you from the status that you believe you so richly deserve.

I am not seeking any "status" here, Ed -- I am merely responding to those who don't have any, can't get any, and spent the last X number of years avoiding taking any meaningful action to achieve it. I've had my "status" as an Extra-class amateur radio licensee since February, 1983, which predates my participation in this newsgroup by almost a decade. How I could be "disqualified" from whatever status you claim that I'm "seeking" is a mystery to me!

>>Just another day at the office for you, Ed -- I tell the truth, then you

Fact, Ed, not fantasy. You are an ARRL employee, there is no secret about that. You represent ARRL as it's de facto spokesman in this newsgroup, whether you admit it or not. The opinions you express in this newsgroup "tow the company line." You have admitted as much yourself. Therein lies the truth in what I said below:

>>Ed -- you MAKE YOUR LIVING working at ARRL headquarters. You
>>simply MUST take an opposition viewpoint to hams like me who are
>>free to tell the truth about the current amateur radio culture and it's

Ed, nobody here is questioning the fact that you know your job and do it
well. However, in this newsgroup, you are faced with people like me, who
do not approve of the way the ARRL has handled the code/no-code
issue, and the outcome of Restructuring. That is reality.

>>I understand, and don't hold this against you. I
>>can hold my ground on my own; I don't need you to validate me.
>
>No, you have made it pretty clear that the only validation you find necessary
>is the fact that you once passed what seemed to you at the time to be a
>difficult ham test. Pretty sad, actually, when you look at the truly useful
>validations done by many of your fellows over the years.

Ed, I have said before, and I reiterate this now: All I did when I ascended
through the "ranks" of the amateur radio licensing structure was what
tens of thousands of hams, people from all walks of life, have done
before and since, up to the Post-Restructuring era. Then, for some
unknown reason, a set of licensing requirements -- which were the
most comprehensive and challenging in the history of amateur radio,
and proven achievable by people from all walks of life, were discarded
in favor of hopefully attracting more newcomers to ham radio by
deliberately making the licensing process less challenging. This
course of action has not had the desired effect. Indeed, it has had
a highly negative effect, that of polarizing the body of radio amateurs
that are separated by Restructuring into groups who achieved the
previous standard and those who must now rightly face the ignominy
of being "dumbed down," albeit through no fault of their own. My
personal "validation" is not an issue here, and never has been. I
am addressing the issue, and speaking the truth about it. Nothing
more, nothing less.

> I hope you do.

I don't see the issue in quite so cut-and-dry a manner. I've taken
classes on introductory and advanced electromagnetic theory, not to
mention circuits, etc. Essentially, I've been "given" the exact
answers, too. Does that disqualify me from taking the test?

I think most of us can agree that people who aquire ham licenses
should have certain level of knowledge, both to indicate preparation
for handling responsibilities and concerns of licensure and a certain
dedication toward the hobby. I don't believe either one of these
items means one should have an electrical engineering degree to be a

ham, or 20 years under one's belt before upgrading is possible.

There are several ways of learning. As I've mentioned before, I simply doubt one could word-associate the entirety of the question pools without actually learning some concepts along the way. But even if you could, learning the concepts is easier! Have you ever *tried* to word-associate your way through 1000 questions?

WA8ULX has indicated the test was easy for him. I would submit this is a direct result of his extensive experience as a ham, and perhaps an electronics hobbyist (I don't really know his background). As I see it, that is exactly as it should be.

An aquaintance of mine took the Extra test at the same time I did. He had just received a master's in EE (he's working on his Ph.D. now), had been a Tech Plus for awhile, and had lots of hobby experience in electronics (he's just about the best electronics technician I've ever known). He had studied hard, but only for the General. He passed the Extra -- barely.

IMHO, that test is *not* too easy.

You'll never get it, will you, Cecil? I could care less about my
place in the ham radio "caste" system as you call it. It is those
who have always resented Amateur Extra-class hams who care
about that, and their "class envy" has created this notion of ham
radio being a "caste system" and other such nonsense.

Bill:

I also use a "regular" ISP (magpage.com) and find it to be no more
difficult to use than AOL. The only difference is that AOL's
so-called "newsreader" has a much higher level of functionality than
the ones on Netscape or MSIE, the only other "browsers" I own. I
can't understand why everyone is always looking down their
pointed noses at AOL? Where is the "complexity" in the other
ISP's, or the "skill" needed to use them? It's just the same kind of
pointing and clicking to me!

I suspected it would come to this. Tonight at 20:00 UTC I tuned across a LSB signal at 14.150mHz. It cought my ear. In listening to it for a while I learned one of the guys was on an FT-101. They signed with a promise to meet tomorrow night "on the regular one", and closed with no call signs. They did say they would be on LSB again.

So for those who said the decline of the cycle would mean an improvement on 10m, you mifgr be right; they'll move to a lower band that still has propagation!

Of course it says that a false statement is a lie, Jim. From
Webster's: "lie - an inaccurate or false statement". That could
not be any clearer.

> > If the opinion is false, the person is lying, by definition.
>
> Wrong.

See the above definition. Your argument is not with me, it is
with the dictionary.

Well put Dan. It is to bad that hams like Dick, Bruce and Larry are so set in their ways.
Fortunately they are few and far between. I am lucky that in the club I am involved with
we do not have any old hams like them. At least if we do they do not come to the
meetings. I am also studying for my extra upgrade, which I feel is a ways off, I am not
very good with math and I am not memorizing the questions. The older guys are helping
with the math. By the way, Dick more than likely will not answer your question. Bruce
never answers any of them.

Well then, how can you possibly know what a Real Ham is? Only a
ham who has been licensed 50 years or more could know what a
Real Ham is. You are still wet behind the ears and simply do not
possess the experience necessary to make a rational decision.

Depends on what group of hams you're polling, one size does *not* fit
all. I think your 10m single-bander question is for the Tech Pluses,
CBers, etc. who lurk only in that part of the spectrum. 10m is just
one of nine HF bands the rest of us have available so the vast
majority of the non-Tech Pluses use multiband HF xcvrs.

Wrong, what Im am stating is the Questions and Answers were a Joke, there was no real Questions in regards to theory, few if any were even trying to test my knowledge, the only use of Pencil was to mark the answers. Still cant figure out why that VE gave me Blank Sheets of paper,it sure wasnt needed to Calculate anything. I performed no math, most Questions were just common every day logic. I mean lets face it, it took me less than 8 Minutes to answer the Questions, and I dont remember but I think there were 50 Questions.
What Im saying is that if the Extra is the highest Amateur License, and that is determined by the present Written Test, then we have a serious problem.
And as far as being an Electronics Guru, I am not. And as far as me being an Amateur for awhile,that didnt help with the Answers either.

Does building and using antennas count?
Does building and marketing antennas count?
Does understanding, at least. the basics of RF theory and antenna
construction
count?
Does making repairs to one's own equipment count?
Does the ability to do at least a modicum of troubleshooting and repair to
one's station count?
Just what does one have to do to meet the original poster's idea of being a
"real" ham?

Remember the Extra exam is the *entrance* exam into the Extra class
and thus is a *minimum* level of requirements. The Extra class
license is NOT a graduation certificate. I thought it was easy
also but that is because I already knew the material. Anything
is easy if you already know it. Designing an Extra exam that would
tax my knowledge would flunk most of the present Extras.

I'm not sure how clearly the FCC rules on testing are now defined. But
any violation of VEC regulations should and I am sure can be viewed as a
violation of FCC rules. Anything else invites chaos.

I learned the code in 1956 by sending to myself. That was long before
there was wide availability of *any* code practice paraphrenalia
(cassette tapes hadn't been invented yet) and code practice was largely
listening on the air with whatever receiver you could come up with. And
to listen to code, you had to be able to recognize the characters, which
I learned to do by sending them with a buzzer. It's not the best nor an
easy way but it works.

To learn recognition of the numbers, just remember that all have 5
elements. 1 through 5 begin with dits, the number of dits being the
number itself, as .---- is one, ..--- is two, etc.
Then, above 5, they begin with dahs, and the number of dahs gives the
number above 5, ie -.... for six, --... seven etc. Once you practice
this awhile it will stick.

As Ed said, nothing works like practice. That includes recognition
practice.

Good luck.

Dick

I do!!!
I use a HTX-10 10 meter Radio Shack Rig. I'v talk as far as
Argentina and Puerto Rico useing a Big Stick antenna.. On Field Day I
talked on SSB phone from Canadian Maritimes to Kansas on a dipole made
from 16 gage speaker wire. It is a shame it has been dicontinued for
it is not in the new Radio Shack catalog. It is a fun radio and I'm
glad I bought it when I did. :-)

Oh- you would rather that I just memorized the answer? Test questions
involving computations normally require one to "work" it out. Unless, of
course, they're in the pools....

I deliberately chose a question that involved
> no math whatsoever beyond a simple head division by 2. You must have "worked"
> something because you divided the 2V/m by 4. You did more "work" than you had
> to, and still got it wrong, then you are trying to tell us that you got it

> >the E field is a part of it. But the diminishing RF field DOES reduce as
> >a function of the square of the distance, of course you know that.

> No, no, no, no, no!

YES, YES, YES, YES, YES!!! Quoting from the ARRL Antenna Book, 15th
edition, page 23-3: "Because of the relationship between voltage and
power, the power density therefore varies with the square roof of field
intensity, or inversely with the *square* of the distance".

That is what I was referring to. Yes, I know that the voltage function
is different. Ever hear of I^2 R?

A diminishing field from an antenna diminishes inversely
> with distance in the far field. The E field is NOT "part" of the E field, it
> *is* the E field, just like the magnetic field that is radiated by an antenna
> is the magnetic field. They are related, but either field from the antenna
> varies as the inverse of the distance. Again, it is clear that you do not
> understand what a field is.

Lets see, some grow corn in them, some grow wheat.... I'm talking about
the RF field. The power density is the sum of the electrical and
magnetic fields. That's what I -and the ARRL Antenna book- said varies
inversely with the square of the distance. So what? You tossed out a
question that has little relativity to ham radio on a practical level.
By the way, it was you who stated here on rrap that hams don't have a
need to be electrical engineers. I see you've Changed your mind. You
codebashers seem to always talk out of both sides of your mouths.

Well, what is it that makes you think you are the problem? It seems clear that for one who has had all that electronic education it really wouldn't matter much, would it? It's the people who come to the test with no background whatever and make as good a score as you and take away the same license as you do, yet have learned virtually nothing in the licensing process. There are lots of them out there, too. So how do we sort them? What it does is diminish the entire process and thus ham radio in its entirety.

I stated some time ago here that during the eight years I ran a VE
team that rarely did anyone turn in a test scratch sheet with anything
at all on it. (applicants were required to turn in their work/scratch
sheets where they worked out problems) I was immediately slammed as
"assuming" that just because the worksheets were blank that no one
calculated anything on the tests.
Yeah, right!

Still cant figure

You are correct. I apologize. I must have been confusing your answer with
Larry's.

You said:

> Why not just say that it varies inversly
> as the square of the distance
> like the multiple choice questions on the
> tests do? That way the newbies
> will have less trouble memorizing it.

And of course my answer to your question still stands. I would not say that
because it is wrong.

> I'm unsure just what your position at ARRL is all about. Once I thought
>I knew.

My position at ARRL is to manage the ARRL Laboratory, overseeing Product Reivew
testing, the ARRL Techncial Information Service and the Lab' support of the
ARRL publications. My personal work there involves RFI and spectrum matters.
You can read examples of my work in many of the ARRL filings with the FCC. My
position at ARRL does not involved getting on rrap and making you look bad,
Dick.

>> >But the diminishing RF field DOES reduce as
>> >a function of the square of the distance, of course you know that.

>> No, no, no, no, no!

>YES, YES, YES, YES, YES!!! Quoting from the ARRL Antenna Book, 15th
>edition, page 23-3: "Because of the relationship between voltage and
>power, the power density therefore varies with the square roof of field
>intensity, or inversely with the *square* of the distance".

No, Dick. Power density is NOT the same thing as a field. The field
strength from an antenna falls off as the inverse of the distance in the far
field. Free-space has an impedance, so, in the far-field, where the E and H
fields will have a relationship that corresponds to that impedance, power
density can be calculated using the formulae:

PD = (E^2) / 377
PD = (I^2) * 377

> That is what I was referring to.

In doing so, you are mixing up terms that belong separate. It would be no more accurate to mix up field strength and power density than it would be to mix up volts and watts, and use those terms interchangeably.

> A diminishing field from an antenna diminishes inversely
>> with distance in the far field. The E field is NOT "part" of the E field,
>it
>> *is* the E field, just like the magnetic field that is radiated by an
>antenna
>> is the magnetic field. They are related, but either field from the antenna

>> understand what a field is.

>The power density is the sum of the electrical and
>magnetic fields. That's what I -and the ARRL Antenna book- said varies
>inversely with the square of the distance.

My question asked how the the E field varies with distance. Your question in response asked why I didn't just tell them that "it" varies with the inverse square of the distance. In context, "it" can only mean the E field. "It" does NOT vary with the inverse square of the distance.

> So what? You tossed out a question that has little relativity to ham radio on
a
> practical level.

Sure it does. If I want to calculate my compliance with the FCC RF-exposure regulations, knowing that the fields vary as 1/D and that power density varies as 1/D^2 has a distinct practical application. You may feel that hams should not learn anything beyond practical applications, but I believe that a good foundation in fundamental theory is important.

>By the way, it was you who stated here on rrap that hams don't have a
>need to be electrical engineers. I see you've Changed your mind. You
>codebashers seem to always talk out of both sides of your mouths.

That is quite a stretch, Dick. I ask a question about the most fundamental aspect of radiated signals and now you think that I believe that hams need to be electrical engineers. Amazing.

Why do you call me a codebasher? I would estimate that about 99.5% of my on the air activity uses Morse code.

You can sure build a house of cards out of thin air, sometimes, Dick. Try getting more self control on that overactive imagination.

>> > And may I suggest that you go soak your head?

>> Do you think that will make your wrong answer correct?

> Not even if there had BEEN a wrong answer, which there was NOT.

You are correct, so let me rephrase that. Do you think my soaking my head will make your misunderstanding that fields and power density are the same thing be

correct? Do you think it will teach you the difference?

> You may soak your hemorrhoids as well. It appears you should be able to
>handle both with one sitting.

I can see that your imagination is not the only aspect of your personality that could benefit from some self control.

> I try. That's better that's than some posting here.

And if "soak your hemmoroids" is the best you can manage, the end result is about the same as those who don't try at all.

>Neither do I, but an administration could easily hang their
>Morse hat on "operational qualifications" (paragraph 1).

Or not. If this draft is implemented at the international level, the FCC still has to decide whether it is going to keep code testing, and in what form.

The really ironic part is that if the requirement is dropped, the only way that new hams will learn Morse code is voluntarily, like they voluntarily use other modes. Some of the things being said today by people who probably do believe that they are helping the mode are the very things that are going to make it hard to convince new hams that the mode is valuable, has utility and it a lot of fun to use. Ironic, indeed.

>privileges, without having made the effort to succeed under the previous
>licensing standards. In other words, I have no argument with you. Why
>are you defending yourself to me?

Because, after having looked at the current tests needed to get all Amateur privileges and the 16-page study guide I read in the 1960s to do the same, I think that I took a test that was easier than the tests of today, so I fear that I may hold less status in your eyes. And if you think that you have less status than me, your low opinion of yourself may explain why you are so gosh-darn hung up on status.

Unfortunately, your poor performance on the test you took here has pretty much permanantly sealed your fate.

> Hes not Larry, as you and I know hes trying to defend the FCC and ARRLs
>actions.

I think not. I did not agree with either the ARRL's position or the FCC's end result. I believed that there should have been 4 classes of licence, with a 0 wpm Tech, a 5 wpm General, a 5 wpm Advanced and a 20 wpm Extra, with the Extra giving ONLY the lower 25 kHz of 80, 40, 20, 15 and 10.

My believing that now that the FCC decision has been made, all this bellyaching and petty insulting, being done mostly, but not exclusively, by the pro-code-test side, is harmful to ham radio. I do NOT believe that code testing is the most important issue facing Amateur Radio today.

Bull its not just a CW thing, its the Quality of new Hams. If were going to do away with CW Testing than at least put into play a Real Written Test. I know there are 10 Million Q&As now and no one can Memorize all of them. All were getting is Technical Gurus, stange I keep seeing on other Boards Questions like, can some give me the Lengths for a Dipole.

>Your premise that ham radio applicants relish the idea of learning
>enough electronics to pass a 1000 question (potential) exam is
>ludicrous.

Why is it ludicrous to believe that most people who set out to become licensed amateurs do so because they want to learn about radio and electronics?

>What they REALLY want to do is pass the test(s), usually one
>at a time.

Well, yes, they want to pass the tests. Duh!

>So they "study the tests"-one at a time- with all the exact
>questions and exact answers, with the primary view that matching the
>answers with their questions is the way to pass that or any test.

But that is not the easiest way to pass the tests, Dick. Learning simple concepts such as the fact that the field strength from an antenna varies inversely with the distance and applying 6th-grade math is the easiest way to pass the tests.

In the examples of the questions about field strength and power density that are on the General exam, the correct answers for some of the questions are used as the distractors in other questions. This "word-association memorization" theory of yours doesn't hold up to analysis of the pools.

>Only those who hide in caves -or have some reason to refute the facts-
>could assume otherwise.

I have no reason to assume otherwise, Dick, and I don't live in a cave, so I have no reason to believe you are talking about me. :-) What "reason be believe otherwise" would I have for trying to tell new hams that the easiest way to pass the tests is to learn the material? If they take me at my word, they will learn the material. I cannot imagine why you think that would be bad, except perhaps that your "reason to be otherwise" is that you don't want to be wrong about the fact that all these new hams are entering ham radio not to learn and are word-associating over 1000 questions without understanding.

>Yeah, right!

In almost all cases, the math involved uses whole numbers that can easily be worked out in one's head, if one knows the concepts involved. Now that you have learned that the field strength from an antenna varies as 1/D, would you need to write down anything to work out the answer to my original question: If the E field is 2 V/m at 100 meters, what is its strength at 200 meters? If I added 3 or 4 questions on the same subject to a "pool," would you word-association memorize the answer, or do the 6th-grade math after you had memorized that the field strength from an antenna varies as 1/D?

>There was nothing to Calculate on mine.

That is pretty much true, except for the questions on complex impedance. One can test an applicant's knowledge of Ohm's law using whole numbers and there is nothing to be gained by using numbers with fractions or decimal points.

I would agree, btw, that rote memorization IS used for some of the answers -- the example I just gave on complex impedance is an example of that. (IMHO, that is a problem that needs to be fixed in the exams.)

However, I don't think that rote memorization plays any more or less of a role today than it did in 1963 when I passed my exams with a combination of learning, memorizing, lucky guessing and hoping that a few subjects didn't appear on the tests that I was given.

I am sure that there are some people whose self confidence is low enough that they need some reassurances or help with even the simple questions. We had them in 1963, too, Bruce -- one of my Novice friends asked me the very same question.

Of course, now that I know better, I can tell you that the length of a dipole antenna can be anything you want it to be up to a half-wavelength electrically. Some use infintesimally small dipole models in some of our antenna modeling and propagation analysis.

Now, can you tell us what the gain of a half-wave dipole is over perfect ground, in dBd? :-) I will give you a hint -- dBi is the gain of an antenna referenced to an isotropic radiator and a half-wave dipole in free space has a gain of 2.14 dBi.

What if someone doesn't have a square roof, Dick? :-) From that same
page in that same edition of that same ARRL Antenna Book: "In free
space the field intensity of the wave varies inversely with the distance
from the source. If the field strength at one mile from the source is
100 mV per meter, it will be 50 mV per meter at two miles, and so on."

How does one learn band edges without memorizing? How does one learn
Morse code without memorizing? How does one learn Ohm's law without
memorizing I=E/R? Do you develop everything from first principles?
I'd sure like to see you develop Morse code from first principles.

Because you didn't post your definition of "forced", the context was not changed from my posted definition of "forced", that's why. If I say, "you were forced (required by circumstances) to meet the FCC requirements", it is a true statement. When you follow up, "I was not forced", without posting a different definition, then you are accepting the context of my definition. That's the way English works since it is not a context free language. Why didn't you just change the context by posting your definition?

2211. Re: New Blood Yea Right

Newsgroup: rec.radio.amateur.policy
Date: 2001-08-31 14:47:18 UTC
From: Paul Friedman <paulfriedman@uswest.net>
Message-ID: <WrNj7.155$TL1.173311@news.uswest.net>
Source record: 18453

As one who is currently studying for the exams, may I throw in a thought or two?

Quite a few of the questions REQUIRE thoughtless memorization (frequency allocations is the most obvious example). Others require either memorization or a small amount of knowledge combined with common sense (RFI rules). Finally, there is a set of answers requiring either memorization of the answer OR memorization of a formula combined with simple math.

Since the student's (moi) motivation in taking the test is to pass it (that is not to say the student is not interested in theory and practice, merely that it is VERY doubtful he will see the TEST itself as part of this process), the pure memorization questions tend to swamp out the formula questions.

A simply way to make sure those taking the test memorize the theories rather then the answers would be to have multiple guess questions for the regulations and fill-in questions for the formulae.

Fill-in questions for the regs would be a very big mistake, I think, but it does make sense (to me, at least) for formulae. I don't think this would place an undue burden on the VEs (bless their souls for volunteering their time and energy).

Paul Friedman

The pirate ops operating on the bottom end of the 40 meter amateur band
believe that earth is flat. I think that had something to do with starting the
Civil War and why attributes in newsreaders get screwed up.

With all due respect, the old coot doesn't even have a license,
so I guess I'm higher than him. Sure would be nice to have
another HV4xxx call around the bands though. HV4JP would have
a nice ring about it.

With all reverent kind wishes,

de Hans, K0HB

I agree with you regarding the "learned virtually nothing" thing, but
I don't see the problems you see, I guess. I don't believe most
people could do as well on that test as I did without having actual
knowledge of the subject material, *even if they didn't intend to
really learn it in the first place.* Learning's a funny thing that
way.

At the very least, putting in the time to rote memorize that many
questions and answers would indicate a large degree of committment and
interest in ham radio. And as I've said, if they're really looking
for the easiest route, they'll learn concepts, too.

For those who are interested in anecdotes, I could also tell stories
of EE's who have taken -- and failed -- the Extra exam, after having
studied for it.

I agree with the above. It should also be noted, however, that the
question pools cover enough of certain subject material (e.g.
frequency allocations) that you might as well memorize them all.

I believe this is an individual thing. For me, the formulas and
concepts were easier on many questions.

This certainly wouldn't be a bad idea, but if you publish the
questions as part of the question pool, you have the same complaints.

The questions could be published with blanks for the numbers.

Take question G5B11
A sine wave of 17 volts peak is equivalent to how many volts RMS?

Publish it as:
A sine wave of _____ volts peak is equivalent to how many volts RMS?

Guidelines for the VEs or VECs could be:
Voltage should be expressed in V (i.e., not mV or similar).in in the range
of 5V to 200V inclusive.
Answers are to be considered correct if within 0.5V

I obviously made up the parameters.. but something along those lines.

Paul Friedman

Nope. The definition is for the word 'lie' - not the words 'false statement'. Is a carnivore an alligator simply because an alligator is a carnivore?

Now quit acting stupidly.

Jim, I quoted the dictionary definition. From Webster's:

"lie - an inaccurate or false statement", i.e. any false statement

Clearly a false statement is a lie, by definition. The definition
of words change over time. Since you were a young'un, the definition
of "lie" has changed to encompass inaccurate and false statements.
A lie no longer requires that the liar knows it is a lie. In the
21st century, ignorance alone is enough to produce a lie and
ignorant people sure do lie a whole bunch.

Absent a female, condoms do NOT perform birth control.
However, they do make excellent water balloons.

I've always liked using the expression "it's better than nothing"
because (to me) it could also mean there's _nothing_ 'it' is better than
- while still retaining a kind of ironically uplifting feel to it. :-)

Same thing could be said of a male. But a condom is still a birth control device no matter where it happens to be located. A tractor is still a tractor even when it's just sitting in the yard.

> However, they do make excellent water balloons.

I'll write that down.

If the party actually memorizes questions and answers, yes. I'm sure
some do, but many only memorize word associations which serve only to
match a particular answer to a particular question, a method which
serves better when one knows nothing whatever of the subject matter.
You and I would have difficulty using such a method since we can't read
a question or answer that has content we recognize or know anything at
all about without thinking it through thereby learning. As I've said
here before, the less you know the easier it is to use this method of
passing the tests, while learning virtually nothing. This is done by
many applicants who just want the license.

What experience do you draw on to make that statement? I learned about
that method of quickly getting the license after a few years continuous
time as a active VE. Previously I never suspected it. My view is
definitely reinforced by all the cram scools which guarantee the
applicant that he will be able to pass a ham radio test after a few
hours of studying the tests. How you can ignore all that is amazing.

My parents insisted that I prove that I could copy Morse code before
they made a 200 mile round trip to the FCC office in Houston in a '46
Chevvy with no air conditioning. A Morse 78rpm record was about eight
bucks and we didn't have a record player. Renting an Instructograph
cost about a buck a week if I remember correctly.

You know there is a difference in just memorizing a formula and
understanding what the terms mean and how they interact.

The point is that I memorized Ohm's law 50 years ago and I have
no idea how to unmemorize it in order to please you.

God bless you, Ryan. The numbers are kicking my butt as well. I too practice with a code oscillator, not to mention the Gordo cassettes and the ARRL CD's. I've heard that it is not a good idea to practice sending code until you can completely copy all the characters. I'm not 100% sure of how true that is and I'd like to solicit the opinion of all in the group re. this. Best of luck to you, I know you'll do it.

When I first started practicing, I felt like banging my head against the wall but after a while it wasn't so bad. Now, if I feel discouraged, I just remind myself that I'm more than halfway there. It'll feel so good once the initial hurdle is out of the wat, then you'll do code just for "the fun of it." Before you know it, your speed will climb, worry free. Once again, good luck.

Thank you all in advance that offer any advice re. practicing by sending. Take care all.

Polarity. Are you referring to antennas in particular, or would the
same thing apply to a molecular dipole for example? What kind of "use"
does this dipole get?
The question is trickier than the anwser I presume.

Another alternative is to have the same question with a set of 20
or more sets of variables and the corresponding answer. If
someone is about to memorize 20 sets of numbers for each
set of calculated questions, then more power to their mental
abilities.

>
>Larry, how do you get the attributions correct on AOL?

Cecil:

I assure you, it's not by any specific action I take. I usually just use my mouse to select the text which I wish to quote, then hit the "Reply to Group" icon. I then re-select the entire contents of the resulting Edit window, and paste it to Microsoft Word '97, where I compose/ edit my reply. Occasionally, I need to "split apart" a block of quoted text; when I do so, I manually re-input the "attribution markers" (>, >>, etc.) in the required places, to indicate the proper attribution level of the quoted text. The procedure is the same regardless of which "ISP" I'm using -- AOL or Magpage.com. The only difference is that when on Magpage, I'm using Netscape as my browser, as opposed to AOL. As you can tell, I do most of my newsgroup work within AOL, since it has a much easier and logial "interface" for me. If selecting the software that is most suitable for my personal needs is an indication of my lack of computer skills, then I'm guilty as sin! I just call it picking the right tool for the job!

Ed:

Hmmm. Might I speculate what you "felt should be done?" My guess is that you "felt" that Morse code testing should have been totally eliminated, or should have been reduced to answering questions *about* the Morse code within the written test, or that the scores of the Morse code and written tests should be combined -- or some variation of these typical NCTA "work arounds" to thwart the pass/fail nature of the stand-alone code tests. Am I warm?

Ed:

Yes -- my fate is sealed. I get to continue on being an Amateur Extra Class licensee, who upgraded during the FCC-tested Pre-Restructuring Era, and who "Aced" all but one of my written tests (the Advanced) in the process. My knowledge may have slipped a little, but I can overcome that any time I want. I will gladly put my current technical knowledge to the test against any randomly-selected, newly licensed Amateur Extra of the Post-Restructuring Era. I will not put them to the test against a person like yourself, who works in a technical field, and has the requisite professional-level technical knowledge. I am an AMATEUR radio operator. I have never claimed to be anything else.

That slavery was a major cause of the confederacy's existence.
>
>> Think about this: Where is Fort
>> Sumter? What was the % slave population
>> of that state in 1860?

> So you're saying because South Carolina fought the first battle with
>Fort Sumter, and South Carolina had slaves, those two issues are
>somehow linked - South Carolina attacked Fort Sumter because of
>slavery?

Yes.

South Carolina had the highest slave population of any state. If memory serves,
the 1860 census found that SC's population was 57% slaves! In other words,
almost 2/3 of SC's people did not even own themselves!

Again, if memory serves, SC was the first state to secede, and by attacking
Fort Sumter it led the way to war.

> If that is true, how would a battle with Fort Sumter decide
>the issue of slavery?

See above.
>
Here's another fun fact: By 1800, ALL of the states north of the Mason Dixon
Line had either abolished slavery completely or had passed laws to do so. None
of the states south of the line had done so, but there was considerable support
of abolition.

But as the 1800s progressed, the slave states became more committed to slavery,
not less, in large part because of a simple invention: the cotton "gin" (short
for "engine"). It so reduced the cost of processing cotton that the economy of
the states that grew it was radically changed. Cotton eclipsed tobacco as the
main cash crop. The rest is, well, history.

And they are mistaken. One can only be responsible for one's own actions.

>In fact, it is exactly this mentality that drives the present civil
>rights movement (blacks should receive favorable treatment because
>their ancestors were mistreated and those are the people who did it).

It's not that simple, Dwight. See below.

>And, again, this is a very harmful way of thinking because it so
>easily justifies mistreatment of another group. For example, when
>applied to civil rights, it justifies black only colleges while the
>same is illegal for whites, black only political organizations while
>the same is illegal for whites, and widespread discrimination against
>whites by black owned businesses.
>
First off, the civil rights movement is not a monolithic entity. There are lots
of issues to deal with. The most important issue is that all people did not
suddenly receive equal civil rights in 1865. For example, there were all sorts
of weird voting laws that made it extremely difficult or impossible for certain
groups to register to vote. It took Federal laws over a century to wipe them
out. The lunacy of "separate but equal" educational systems was actually
endorsed by the Supremes , then rejected. Discrimination in employment, the
military, housing, health care, and many other areas continued for a very long

time. Some of it still lingers today.

Discrimination was not limited to black people, of course. Women (who did not get the right to vote until 1920) and many minorities (Jews, Catholics, immigrants from eastern or southern Europe, to name just a few) were often discriminated against. Then there's anti-regional bias - you know something about that!

Now the question is, how to end this? Some say that the way to end discrimination is simply to end it - no more preferential treatment for anybody. That's what "equal opportunity" really means.

Others say that's not enough, that some sort of reparations or remedial action needs to be taken to fix the many years of discrimination. That's what "affirmative action" means.

They are not the same thing by any means.

Again, you're trying to apply today's standards to the past. At the time, slaves were not part of "SC's population." They were property, not citizens.

> Again, if memory serves, SC was the
> first state to secede, and by attacking
> Fort Sumter it led the way to war.

The civil war might not have happened at all if the Union had properly recognized the secession and had removed it's troops from Fort Sumter. Instead, the Union left it's troops at that fort, with the implied notion that the Union, not SC, controlled that important harbor. At that point, SC had no choice other than to fight.

There you go again, not believing that the mode is valuable enouh, has enough utility and is fun enough to use that it will not survive without extensive FCC testing. Do you think your saying that will convince new hams to try it? I do not.

Fortunately, there are those among us who realize that saying positive things about Morse code and its applications can and will help persuade people to learn it and use it.

Now as to my views, I would like to see some code testing continue in the Amateur Radio Service. I don't think that my view is going to prevail, though, so I am not going to say things that will destroy the only future Morse code may have to try to accomplish something that won't happen.

The biggest difference between us, Dick, is that I believe that Morse code has enough utility and appeal to survive on its own when code testing is removed. You apparently do not. If you feel the mode has such little value, I can't understand why you are so passionate about the subject.

>variation of these typical NCTA "work arounds" to thwart the pass/fail
>nature of the stand-alone code tests. Am I warm?

No. My input to Tom Frenaye was that I believed there should be 4 classes of ham license. A 0 wpm Tech, a 5 wpm General, a 5 or 10 wpm Advanced (I didn't care which) and a 20 wpm Extra. I believed that the Extra should convey only the lower 25 kHz of 80, 40, 20, 15 and 10.

It didn't happen. From what the FCC did, I think the next change after the code requirement is dropped as an international treaty should be to have a 4-tier structure, with a 0 wpm Technician, a 0 wpm General, a 0 wpm Advanced and a code test for Extra CW priveleges on the lower 25 kHz of 80, 40, 20, 15 and 10.

That latter belief is the reason I do not support No Code International. They have made it pretty clear that it is exactly their way, or the highway. :-)

Dick, please don't mislead people who are studying for their licences. This is just about the most difficult way possible to pass the test. It is much easier to learn the simple concepts and apply 6th-grade math to solving them.

What are you trying to accomplish in persuading people not to learn the material? That would be the effect if people studying for the tests believe you, assuming they can pass the tests at all by "word association."

Actually, I believe his prejudice is toward word-association memorization. That is why he erroneously keeps telling new hams that word-association is the way to study for the test.

He is wrong. The easiest way to pass the test is by learning the underlying concepts and using 6th-grade math.

You're right, it is not that simple. If the real goal is "remedial action needs to be taken to fix the many years of discrimination," than that process can go on forever. For example, fifty years from now, you're going to have all those who have suffered under the present affirmative action programs demanding "remedial action" to address the wrongs done to them (assuming that group is not simply eliminated from the American political landscape).

Dick, I have seen plenty of examples in what you "see" when you want to see it.
I have no doubt that some manage that technique in studying for their tests,
but they are wasting a lot of effort. The easiest way to pass the tests is to
learn the underlying material and apply 6th-grade math to work out the answers.

I am surprised you are not explaining that to new hams instead of convincing
them to use word association to pass their tests.

I think that all the requirements could be met if it were done in a table.

A sine wave of "E1" volts peak is equivalent to how many volts RMS ("E2")?

E1 E2
17.0 12.01
10.0 7.07
etc

If there were 10 entries in the table, I think that at that point, even Dick would stop convinging hams that they should be word-assocation memorizing the answers. Bruce will probably never see the light. :-)

Bruce got one wrong on his Extra (if you believe him). Do you consider him to be a failure? Good thing he didn't get the question I asked about the gain of a dipole in dBd, or when he left it blank, he would have gotten it wrong. :-)

Of course, he got one wrong on his post, too -- if you miss up to *any* 25% of the questions, the FCC feels it is no big deal.

I will add that if you get the band edges wrong *after* you have gotten the license, the FCC might consider it to be a big deal. :-)

2286. Who "needs" Electronic QSLing...?!?!

Newsgroup: rec.radio.amateur.policy
Date: 2001-09-01 11:42:01 UTC
From: k4yz@aol.com
Message-ID: <20010901074201.01923.00003280@mb-fu.aol.com>
Source record: 18580

(This posting is being forwarded to the ARRL as a "Letter To The Editor)

Hi Everyone,

Now that ARRL has thier own electronic QSL system in place or about to be launched, I can't help but wonder how much longer it will be until the art and tradition of QSLing will be lost.

Don't get me wrong...I am not trying to be "anti-technology" here. I love being able to access info that only a few years ago would have required a trip to the library. E mail, games, research, etc are all fantastic. (This submission is being sent electronically)

But do we really need to take away one of the last vestiges of human interaction? I know that some will say "you can still do it if you want...", but like any other "commoditiy", how long will it be until electronic QSL's will be ALL that you can get?

Before, getting certain awards meant that you made a certain amount of QSO's, exchanged QSL cards and made your application. It didn't require any special equipment or access. Elctronic QSL's will now MANDATE (eventually) the ownership of a computer, access to the net and the prerequisite software, not to mention a printer and the consumables that go with it.

Let's not lose that personal contact that binds ALL Amateurs worldwide together.

Thanks for the excellent history lesson! Sounds like Missouri was a microcosm
of the conflict.

The Kingdom of Calloway is right out of "A Canticle For Leibowitz".

One can look up census data all the way back to 1790 online. (I lost the url,
but a quick check of Yahoo should do the job). The results can be sorted by
county, too. Perhaps a comparison between % slaves in various Missouri counties
would shed more light on things.

This was posted using AOL 5.0. I've used AOL software from 3.0 to 6.0. I gave up on 6.0 and went back to 5.0 because it had a number of extremely annoying features, like insisting on sending email as HTML. (This is fixable, but I had already gone back to 5.0 when I learned of the fix).

The proper number of ">" will be preserved IF one sets the correct quoting style.

Why AOL? Because I'm not the only one in the family who uses the computer.

There you go again, Jim, portraying yourself as omniscient. Taking away
slavery would not have guaranteed a zero percent chance of a civil war.
It would only have resulted in a lower probability of civil war.

Good for you, Steve! It was well put and stated in a way that fosters discussion.

Having said that, there is nothing about Log of the World that will prevent those who choose to exchange paper QSLs from doing so. In fact, I agree that there is something nice about that piece of paper on the wall. I don't think that QSLing will go away at all.

Will some DXpeditions choose to QSL only electronically. I would imagine -- it saves a LOT of work. Your choice will be to work them or not. If you want only paper confirmations, wait for the rare one to come up again with an op who QSLs on paper.

I think that most ops will QSLL with a card, though. People go on DXpeditions to help other hams and to have the time of their life. Those who would do that will probably honor the request for the card.

I think there is plenty of room for both.

Just MHO.

HTML email is annoying because Netscape doesn't know how to quote it
in a reply. I have to cut and paste to be able to quote HTML in a reply.

> The proper number of ">" will be preserved IF one sets the correct quoting

Well, I'm receiving contradictory emails on that subject. Are you saying
that selecting "Internet Style" quotes will fix the attribution problem?

some snippo applied

That Missouri did not secede is understandable given that the Assembly would have had its own Civil War.

The Kansas thing (along with your excellent point on SC) is a really good illustration of your thesis. Slavery was most definitely the point there, rather oddly when the area was about as useful as the back side of the moon for slavery and plantation economies in general. The hotbed of pro-slavery activity was in the Kansas City area where they simply crossed the border and took up jayhawking.

Look up the career of Sterling Price. Could have been the model for Jubulation T. Cornpone.

From Heinlein's Starship Troopers: If you think wars don't settle things, tell it to the city fathers of Troy.

As long as you did not develop the Castillian lisp affected by all kinds of SoCal social climbing ladies. Had I been on OJs jury, I would have gotten him off the hook by strangling Marcia Clark sometime in the second week.

There is a dear lady running an Oprah in Spanish out of Miami who has had to develop a Spanish spoken by no one to keep everyone happy. Seems some things that are perfectly reasonable in Cuban are obscenities in Bolivia.

I've already readied the question on a simple matching problem. :-)

Given an SWR of 12:1 on 450 ohm ladder-line (VF=0.9), what length of
parallel capacitive stub is necessary to bring the impedance to 50+j0 ohms
and what percentage of a wavelength away from the current loop should it
be placed?

Gee... other that a few corrections for errors.... how much has the written exams actually changed?? From the different question pools I have seen from the past 20 years or so, (nice to aquire old books! :), the questions haven't changed that much. Was there more questions asked? If the problem is multiple-guess now, were the questions fill-in-the-blank?
If the problem now with the written tests is that they are multiple guess, why don't they either change it to some other format or at least make the answers not so apparently obvious.

I will say it again to all that are complaining about the testing procedures, what exactly are the methods of testing that will finally make you happy?? Please be specific, not using generalities etc..

I have tried also on 70cm..... not much activity there in Michigan except repeater links. The simplex frequencies are comatose there too.... I am stuck in the VHF and above ranges not because of licensure, but other problems.... So I have to make the best of what I have to work with. Currently I have one scanner that has ALL the 6m, 2m, and 70cm simplex frequencies programmed in, in 10khz increments, and I bet you can guess which one is the quietest scanner I own.....

Never though of that one..... Again stated, using the APCO Phonetics (Adam,
Boy, Charlie etc.) at work and the ITU Phonetics (Alpha, Bravo, Charlie
etc.) in amateur radio can be a little confusing at times.... :)

If a person has no electronics background, they can not pass a ham exam without studying for the test. To say they have learned nothing in the licensing process is what I
would call a statement base on less than average intelligence. The other option is that it
could be a statement form a person that is afraid of any change. I would like to se some
of the guys that passed there so called (Real Test) in the so called good old days at the
FCC office walk into a VE test session and take an extra exam without any study. I have
a feeling a good portion would not pass the test. But we will never know because that
will never happen.

If any Newbies are reading this Stuff dont listen to ED. As ED has stated many times, he even guessed and Memorized his way into Ham Radio, as Ed has said many times you can learn this stuff after you get a license. If you want the trick to passing the Test, heres how you do it. First Memorize the Freqs you are alloyed to use, then the Power you can use, then read over the rules and stuff like that, dont put to much time on this because most are just common sense things, next forget about the Theory Crap, there are not that many Questions on it anyway, then if you are in doubt choose B or C as your answer, its your Call on that one. And the most Important thing to remember is you dont have to get 100% to Pass. If you fail the first time dont worry about it, its not that Big of a Deal, do it again just try and remember what they are looking for from your first test.
I personally know 1 Guy who did it this way, and we went from a No-Code Tech to Extra in one setting. He still doesnt know anything about theory and doesnt want to either.
This same thing will work for the CW Test also, but make sure they give you the Multipile Guess Test.
I know 3 guys also who passed the Cw this way, neither one of them to this day could tell the difference between an E or a T.

>to mention a printer and the consumables that go with it.

Mandate? I don't think so. You can go to the library and use theirs.
In my town, it's free. Probably in yours too.

Besides, for the cost of postage plus IRC's or green stamps for DXCC you
can buy an older but satisfactory computer anyway.

>In my town, it's free. Probably in yours too.

Sure. The library still requires a fee for use of the computer for any consumables used, though. And they have a "time limit" on how long you can use it at one sitting.

NOT very convienient.

>Besides, for the cost of postage plus IRC's or green stamps for DXCC you
>can buy an older but satisfactory computer anyway.

True...and still pay for the ISP monthly...and still pay for the ink...and still pay for the paper or cards...

Etc, etc..etc...

The point was not about the convienience of it, that I acknowledge. The point was about the human contact. It's already on the way out. Guess Ham Radio was to suffer it also.

>And guess what ED there going to get it there WAY.

More than likely, Bruce, although the FCC could listen to a request to retain Morse code testing related to Morse code priveleges, similar in scope to what I believe would be a good next step. But if NCI gets their way, I think it is as much as what they want happens to be the way the winds are blowing anyway.

Though I don't believe I will get my way with the FCC, I intend to support whatever regulations the Commission writes. I believe the very process of having regulations is more important than the details of those regulations. We will all have our say when the time comes, but then it is time to get back to what I see as more important issues facing Amateur Radio.

Let's add to that the requirement than any changes that they propose are ones that have a reasonable chance of being passed by the FCC. I don't think you proposed utopia, but asked the question to find out what steps new hams could take that would make that handful of old hams stop being abusive to them.

You, too, Bruce. For shame. Why do you want to see new hams memorize without understanding? In saying that you are misleading them. It is easier, in both the short run and in the long run, to learn the underlying material and apply 6th-grade mathematics.

Why are you telling new and prospective hams that all they can do with ham radio is talk on a microphone. Those that want to do that without learning anything have FRS, CB and cell phones. Those that choose to be hams make that choice because they want to learn and grow. Why would you want to put an end to that by misleading people about the nature of ham radio?

From: wa8ulx@aol.com (WA8ULX)

>If any Newbies are reading this Stuff dont listen to ED.

> As ED has stated many times, he even guessed and Memorized his way into Ham
> Radio

Yes, I passed my tests with a combination of learning, memorizing, lucky guessing and hoping that some subjects didn't appear on my exam. I think I am happy with the end result; I would like to think that I turned out okay and have added value to the Amateur Radio Service.

>as Ed has said many times you can learn this stuff after you get a license.

You misunderstood, Bruce. Ed said that Amateur Radio is a lifetime of learning and that the learning one does after getting a license is more important than the learning one does to pass a single test to start the process.

>First Memorize the Freqs you are alloyed to use

Yup.

>then the Power you can use

Yup.

>then read over the rules and stuff like that

Yup.

>dont put to much time on this because most are just common
>sense things

Bad advice, Bruce. Though many rules are common sense things, some of the rules, such as the RF exposure material, will require learning and study.

>next forget about the Theory Crap,

Theory may be unimportant to you, Bruce, but it is the foundation on which most hams build. Don't assume that everyone else is uninterested in the subjects you are not interested in.

>then if you are in doubt choose B or C as your answer,

Bad advice. The A, B, C and D order of the answers is randomized by the software that creates the tests. Human biases against A and D don't apply.

>This same thing will work for the CW Test also, but make sure they give you
>the Multipile Guess Test.

That test is no longer available. Prospective hams must pass either a fill-in-the-blank test or 1-minute of solid copy.

> I know 3 guys also who passed the Cw this way, neither one of them to this >day could tell the difference between an E or a T.

Yes, that happens to hams -- has been that way for decades. The most common cause is that some old timer convinced him that CW was not a useful, fun mode.

On what basis do you make that assumption? Although I could envision a special e-qsl-only award, the reality is that many ops will choose to send only paper cards and any award program will have to accomodate them.

Do you really think the DXCC community would stand for it if North Korea came on line and sent only paper QSL and ARRL did not accept them? I think not!

I am curious, though, on what you based your assumption that eqsls will become mandatory.

> Who says that HF is the Big Draw?

obviously all those folks who felt that the code requirement must be eliminated. If HF weren't the draw, then why the need for No Code International and other commie organizations like that.

If fact, the biggest mouth was that of Karl Stevenson, NCI director who felt he was being held back because of the code and couldn't experiment on the HF bands. Interesting to note, that for all his big mouth bravado, he hasn't upgraded and therefore still Can't experiment on HF bands. What a buffoon (careful...he comes Bill Sohl to defend his mentor and leader.....just kidding Bill, you keep on doing what you're doing and everyone will be happy :-)) (see a smiley face!!!

No one, least of all me, suggested that this will happen in the next 30
days, Ed.

>I am curious, though, on what you based your assumption that eqsls will
>become
>mandatory.

I didn't say they would become mandatory, Ed, as in ARRL accepting them
ONLY...I suggested that it will become necessary to do it that way as those
DXers out there ONLY use "eQSL".

(Or perhaps that's what was heard...It was not what I meant...My bust...)

Sorry.

>
>
I'll bloody well explain why I'm "passionate on the subject" Mr. Hare:
Drop the code test and the HF newbie has NO way to evaluate the
virtues of cw for himself because he can't copy the stuff at all. All
the newbie needs to evaluate and perchance opt to indulge in any of
the other modes is the radio, a sound card, a mouth (compression =
ON), occasionally ears seem to come in handy for those types. THAT's
the big difference between the rationale for code test and the "tests"
for the other modes and is howcum us hardcore PCTAs are out in force
around here and in front of the FCC.
>
Why more precisely you might ask? Because the next step quite
obviously & predicatbly will be eliminating the cw setasides so that
the motormouths get the whole Enchilada.

I guess I might have agreed with the 'anonymous coward' stuff - until I checked the ARRL website. Go check out about 'rabbit ears'. Seems he rammed the vehicle that was DFing him! There are some folk who are a brick short of a load - but usually this stuff happens as a result of something else; in this case the DFing was legal, but you get the drift.

Maybe the real question is - Why are there so many abusive old hams?
I don't see abusive behavior listed as a requirement in The Amateur's
Code. Where is your "friendly advice and counsel to the beginner"?
After all, the beginners are NOT responsible for the FCC requirements.

2366. Re: Who "needs" Electronic QSLing...?!?!

Newsgroup: rec.radio.amateur.policy
Date: 2001-09-01 17:20:26 UTC
From: JAMES HAMPTON <j.r.hampton@worldnet.att.net>
Message-ID: <uN8k7.7724$KV3.563485@bgtnsc04-news.ops.worldnet.att.net>
Source record: 18660

Steve, I'd be willing to be both systems will co-exist happily. I've always liked to have that canceled check back when I pay bills; lately, however, I've been paying some by phone and some by internet. I know I can set up an account at my bank and let them take care of everything (I'm considering it). They charge less per transaction than the postage alone to send a paper check! Still, for some things, I want to write the paper check. In fact, for some things I want to use a charge card because it provides some amount of protection. I think the same will apply with the qsl cards and my feeling is that if someone wants a physical card, the other station will oblige; similarly, if the e-qsl is fine (just want a record, no more wallpaper), that will likely be the mode chosen. I suspect both systems will coexist, not unlike the no-code and brass-pounders do today.

Ah - bits have been around for a while. I used to talk to Norm, VK2NP, for hours on end using teletype. My worry isn't the radios working each other - I worry that Microsoft is going to want to charge for the QSOs! (you are aware that they want a percentage of photo transactions from their 'partners' using the new Windows operating system?)

Woody got you the same respect Bobby Knight got Indiana. Now that he is in
the Big Twelve -- the only conference with less class -- he is allowed one
temper tantrum and only one; the first will be the last. Only a Texas
school would hire him and it has been made pretty clear that the Big Twelve
could become the Big Eight again overnite just as the WAC became the Skyline

Conference minus the Texas schools over one winter. Bring back the Southwest Conference so all the nuts can be in one bag again.

In my coaching days I never met a fellow coach who would not like to have had Hayes and Knight drawn and quartered; they made us all look like shit. Tradition is not just winning; it lies in beating another team with class. There is no finer tribute to a program than an opponent looking up from the ice packs and saying that the train that hit him is a class act.

Dick N�BK. Go Big Red, Go Big Red. Off the floor, out the door, Go Big Red.

Bruce, the reason that we buy is that we are better at making money
at something else than we are at building stuff. For a lot of
people, it is easier to make $50 than it is to build an interface.

I haven't seen the final word from the ARRL, but I doubt if either an
ISP or printer will be needed. Just put your log on a disk and mail it
to them, I'd guess. Then go to the library and use the web to check
your status.

Hadn't thought of that one. Thanks - that's one more reason HTML email is annoying.

>I have to cut and paste to be able to quote HTML in a reply.

HTML has its uses, but for most email good ol' plain text does the job. Saves bandwidth, disk space, time, etc.
>
>> The proper number of ">" will be preserved IF one sets the correct quoting
>> style.
>
>Well, I'm receiving contradictory emails on that subject.

Look at my posts - you've seen enough of them! All of them that are AOL generated are done the same way - highlight the quoted text and hit "reply to group". The reader inserts one more ">" at the beginning of each line. SO esy even I can do it. But the right quote style has to be set first. Once that's done, the rest is easy.

Richard McCollum wrote:
>
>
> That Missouri did not secede is understandable...

Actually, they did... or tried. Governor Claiborne Fox Jackson, a southern "states rights" supporter and friend of Jefferson Davis, and IIRC a majority of the legislature, met to hold a vote of succession, but alas, Federal troops heard of the meeting and moved to apprehend the lot of them. They all fled to Cassville, MO, SW border town below Springfield) where they began to set up a State Capoitol, but it wasn't long before Federal troops chased them from that location, and they wound up setting up shop in Marshall, Texas, safely distant from Federal harrasment. Governor Jackson presided over the "Missouri State Capitol in Exile" in Marshall until his death before the end of the war. Missouri was total chaos for the entire period 1856(as you say) well past the official termination of hostilities.Through the war (truly a CIVIL War here, with neighbors fighting and ambushing each other at will, actually with limited actual troop involvement for most of the war. Before long northern sympathizers packed up and moved their housholds to Long's Prairie, north of ROlla where there was a large camp established for them. Southerners likewise moved to rebel Arkansas, leaving the countryside desolate. It is reported that a single log cabin remained standing in this county when the war ended.

And at wa4's end, the hostitilies did not cease. Bushwhackers and other renegades roamed at wil, actually l all during the war and well past, looting and pillaging at at any opportunity without regard to "sides", and murder was an everyday occurance. Many old animosities were settled long after Appomatmix. Look up the Baldknobbers, James and Younger gangs, Bloody Bill Anderson and dear old Bill Quantrill if you want a piece of that history. Much too long and gory, even for RRAP.

The point suggesting a check of slave populations by county was a good one, Jim. That clearly shows AFIAC that the war definitely was mostly based on slavery, since the counties with substantial slave populations were, to no one's surprise, centers of support for the South. The opposite is true of counties where few or no slaves were held.

> Look up the career of Sterling Price. Could have been the model for
> Jubulation T. Cornpone.

Probably was, given the sense of humor of Al Capp. Price was also a former state Governor.

Just because you have no testing experience and choose to disbelieve it
in the face of all the evidence, and many statemets by those who have
done just that doesn't mean you know what you're talking about. You like
to think you have it all down pat, but in fact you do not. Your main
exposure to other hams outside the bunch of mostly degreed engineers at
HQ is the occasional trip to this large hamfest or that, where you do
talks and siminare which are attended mostly by other degreed engineers
who are also hams, and consitute a small percentage of all hams
attending the event.
So most of the hams you meet are already knowledgable and most likely
were pre-licensing. So you just can't believe that the majority of hams
are not, and wouldn't -and didn't- hesitate to use such a method of
passing tests once it was available. Why do you think the FCC held
secret the test questions for so many years? THEY knew. In fact they
still do, they just can't be bothered with doing it right, given the
political climate and funding reductions.

My objective throughout this entire RRAP episode has been to get the
question pools redone so that they might actually constitute a learning
experience for new hams, rather than decoying so many into thinking they
actually learned something about radio since they passed a "technical"
test. We all know the qiuestion pools are not going away. So why don't
you get your head out of the sand and help, instead of criticising full
time? You can get the ear of the VEC committee about as fast as anyone,
but first you must understand the NEED to do it.

> But doing it that way is the hard way,

In your mind. You can't seem to grasp that when one knows NOTHING about
a subject learning the material facts surrounging a question and its
given answer is far more complicagted than making a couple of word
associations that allow you to recognize the question and its answer as
pairs while still knowing nothing whatever about the subject matter.
That doesn't work well at all for us who have exposure to much of the
material, but what that shows is that a little learning can get in the
way of word assocaiting.

I get the drift that you would like to just cover up the facts, Ed, and
pretend that it really is harder for someone with no radio training to
actually learn the material instead of use word associations. It sure
would make life simpler, wouldn't it? that is, until the ARS loads up
with them, as has pretty well happened in last 16 years. We all know
that ham radio has never required that great a depth of knowledge for
licensing, and that is as it should be. But you truly have no idea how
far down it has come.
I would think that W5YI etc suggesting a theoryless license test would
have given you a clue, but no, your head remains underground.

Again- we all know the question pols are not going away, so why not work
to improve them while in your high profile position where you can get
the ear of the right people, instead of criticising me for speaking what
I know to be fact?

Depends engtirely on where you are coming from technically and what
your objective is. Most potential hams just want to get the license,

Sure, there are still steam engine enthusiasts, and vintage railroaders
occasionally put a train on the main line. So it will be with CWwhen
hams no longer are required to learn the morse code.

If you feel the mode has such little value, I can't

I never built a car from scratch. However, in 1990 I built one good car from the carcasses of two junkers. Picked the best pieces of each and wound up with a pile of spare parts to boot. The result lasted 7 more years and was running fine, but the rust became unmanageable.

I was building receivers long before I got a ham license.

Very true! Most of the changes have been in the regulations and "new" areas
like RF exposure.

> Was there more questions asked?

Yes.

Prior to April 15, 2000, there were 5 written tests, one for each class of
license except Tech Plus. IIRC, the Novice was 30 questions, the Tech was 35
questions, the General was 35 questions, the Advanced was 50 questions and the
Extra was 40 questions. Total of 190 questions in 5 tests to get full
privileges.

>If the problem
>is multiple-guess now, were the questions fill-in-the-blank?
>If the problem now with the written tests is that they are multiple guess,
>why don't they either change it to some other format or at least make the
>answers not so apparently obvious.

Prior to WW2, the questions were essays, complete with blue books. A question
might be something like this:

"A crystal manufacturer guarantees that an X-cut crystal will be within .01% of
the marked frequency at 70 degrees F. The temperature coefficient of this
manufacturer's X-cut crystals is 20 cycles per megacycle per degree F. The room
housing the amateur station may experience operating temperatures as low as 30
degrees F and as high as 110 degrees F. What is the lowest marked frequency
crystal that should be ordered for use at the low end of the 3500 kc. band,
allowing 1 kc. of extra margin?"

That's ONE question, and the examiner expected to see all work and an
explanation of how the result was obtained. The exams could also require you to
draw diagrams, both block and schematic, from memory.

After WW2, multiple choice questions began to replace the essays. In a few
years there were no more essay questions but diagrams (just draw 'em, don't
explain 'em) were still required. By the very early 1960s the diagram drawing
was gone, too.
>

>I will say it again to all that are complaining about the testing
>procedures, what exactly are the methods of testing that will finally make
>you happy?? Please be specific, not using generalities etc..

Prior to 1983, the tests themselves were secret. Hams did not know what the exact questions and answers would be, just that they would be multiple choice and that they would cover certain areas. The FCC put out a study guide in the form of essay questions and answers - pick up an old ARRL License Manual (from the '70s or earlier) and you will see what I mean. The higher-class tests were also given by FCC officials only, (with rare exceptions). Just getting to an exam session was a lot of work.

Everything changed in 1983 when the VE system replaced FCC testing. The test Q&A were made public - prospective hams could see all possible questions and answers that would appear on any test. Sample tests could be made up from the exact Q&A pool that would be used in the real exams. Been that way ever since. FCC retains the right to require any ham to retest at any time, and also to approve any and all Q&A in the pools. The Q&A pools are required by law to be very large, too. I think the requirement is 10 times the size of the test, and they are all way over that mark.

There is little chance of abandoning the VE system or the multiple choice format in the foreseeable future. The FCC doesn't have the personnel to do the testing itself, and doesn't see the need to do so. The multiple-choice format insures that the grading is objective - there is one and only one right answer to each question.

Whether the old exams or the new ones are "easier" is a matter of opinion. Is it easier to pass essay exams or multiple choice? Is it easier to pass 5 exams totalling 190 questions, or three exams totalling 120 questions? Is it easier to pass exams where you have the exact Q&A to study from, or ones where you have a short, concise guide of the subject areas? You be the judge.

But whatever the judgement, the FCC isn't focusing too much effort on testing. Enforcement is their focus these days.

I think Ed does believe it , but you have to go just a little deeper, start with his Bosses, they sell Memorizing Manuals, they also know that they gave the No-codes no support before restructuring, now that they know they have to live with it, and realize they have no power, and most likely have seen there Membership dropping, so now they are trying to get New Members and there best shot is No-Codes. And Ed isnt going to go against his Paycheck

Treacle - Noun
1.A pale cane syrup
2.Golden syrup

Poisoning - Noun
1.The physiological state produced by a poison or a toxic substance
2.Killing by the administration of poison

So does that mean "sickeningly sweet" taken in a lethal amount? ;^)

Source record: 18620

Greetings All:

I'll give you a quick, short answer to the question: Who "needs" Electronic QSL'ing?"

Answer: Handicapped hams who can use a computer, but cannot use a pen! Just think of all the hams who are blind, or who have Cerebral Palsy, who can finally access the whole world of awards programs, just because they can now verify their contacts through electronic QSL'ing! Also consider hams on a limited budget. E-QSL's will be a lot less expensive than sending out hard copy QSL's, making awards like WAS, WAC, DXCC, etc. available at a much reduced total cost. Consider the cost of a Worked All Counties award -- if QSL's of all 3,075 required QSO's are made in "hard copy" form?

E-QSL's are definitely not a bad thing, and as Ed said, hard-copy QSL's simply will not go away, as long as hams exist who wish to make use of them. However, the benefits and advantages of E-QSL's will make them extremely popular, there is no doubt about that!

In all fairness, I made my first dipole from the diagrams and data given in the ARRL Antenna Book. Does this make me a "dumbed-down" ham?

My heartburn is with so-called hams who won't open a book -- and will instead depend on so-called "Elmers" to hand-carry them through the process without making any effort whatsoever to research and find the answers using readily available information.

Ed:

Since you apparently don't believe that I am superior to *all*
Post-Restructuring
Extras, why would you object to a completely random selection of one to
challenge my technical knowledge in a fair, impartial test? If I allow you or
Cecil to make the selection, then you'd only select some "ringer" who has a
Ph. D. EE and a visceral hatred for the Morse code. I'd just choose the first
newly VE-tested Post-Restructuring Extra to emerge from the nearest local
testing session -- and let *you* ask the question! (Only one question
allowed, because that's all I got here!)

>read it. :-)

Neither, Ed. I will simply reject it out-of-hand, since it would not be a "random" choice at all! As of now, this offer does not extend to any participant of this newsgroup. The only way we could conduct this test is to happen to be at a hamfest or something, grab a newly VE-tested Post-Restructuring Extra still wiping the sweat off his/her brow from the morning VE session, and ask the question right then and there. Actually, I'd be giving my prospective challenger a great advantage, since just having tested for, and passed his/her Extra exam, his/her knowledge level should be peaked -- right?

Well, I can't fault you there. The only problem with NCI is they started out with a lot of political support right out of the box, since they represent the politics of dumbed-down requirements, "level playing fields," "inclusiveness," and everything else that appeals to basically lazy people who want the world handed to them on a silver platter. That's a pretty difficult nut to crack.

>Extras, why would you object to a completely random selection of one to
>challenge my technical knowledge in a fair, impartial test?

Since you do believe you are superior to all post-restructuring Extras, you have no reason to object to a non-random selection. A random selection might select one of those that you are superior to, proving nothing. Of course, it could hit one of those that are superior to you, proving you wrong. Why take a chance with a random selection. If you truly are superior, let's prove it once and for all by selecting someone whose qualifications are such that if you beat him, you have proven your point beyond any doubt.

> If I allow you or Cecil to make the selection, then you'd only select some
> "ringer" who has a Ph. D. EE and a visceral hatred for the Morse code.

The premise here, Larry, is that you are superior to all post-restructuring Extras, so if this guy is a post-restructuring Extra, you can beat him easily.

I will even include a simple question, such as:

"If a 5 ohm resistor is connected across a 10 volt battery, how much current will flow in the resistor." After all, EVERYBODY should be able to get that one right, eh?

When would you like to do the "shoot-off?" We can post the scores on rrap so everyone can see how superior you are.

Oh, and bone up on field strength near antennas...

>I'd just choose the first newly VE-tested Post-Restructuring Extra to emerge
from
> the nearest local testing session -- and let *you* ask the question!

If that is the best you feel you can go up against, I will take that as an admission that you cede the point to Cecil.

>(Only one question allowed, because that's all I got here!)

Then in that case, the test is uneccesary; the point has already been proven here.

I took one simple example of electromagnetics from the content of the current General syllabus and posted a question here. Of the 3 that chose to give some sort of an answer, one got it right, one got it wrong and one simply made a statement in the form of a question that said that he believed that the field strength from an antenna varies as the inverse *square* of the distance.

Upon seeing the results, I saw little reason to continue. Cecil posted a question that combines the knowledge of several of the questions in the current Extra pool, but so far, none of the old timers have answered it.

It matters not why one wants to pass the test. It is easier to learn the fundamental concepts and apply 6th-grade math than it is to try to "word associate" hundreds of questions for each exam without understanding.

I just don't want to see your well-intended but ill-conceived advice to new hams not to learn anything lead them astray. Unlike you, I want to see new hams learn.

You really do have a need to see me as cloistered, eh, Dick? Too bad that your imagination can't match your reality.

Degreed engineers would be very disappointed at seeing one of my presentations. They are intended to be practical examples of how to deal with RFI, troubleshooting, antennas, propagation and the occasional "stump the speaker" question. I probably talk with 10-15 hams a day on the phone, and about three times that number by email. These are NOT the people that think they know all the answers, they are the ones that have questions.

I attend local club meetings and in general rub elbows one way or another with more than a few hams each year. Now, I don't know how many hams you talk to on the phone every day or how many emails you exchange with hams on a regular basis, but I rather doubt that it is as many, or from as broad a base of ham radio, as is mine.

If the tendency you exhibit here to see what you want to see extends to the rest of your life, I can see how you have come to the conclusion you have come to.

>experience for new hams, rather than decoying so many into thinking they
>actually learned something about radio since they passed a "technical"
>test.

This is not the place to do that, Dick, and if you think that your insulting new hams here is a part of any process of change, you are mistaken. And from what I can see, your advice to new hams has been NOT to learn anything, so your mission is not very self-consistent.

>We all know the qiuestion pools are not going away. So why don't
>you get your head out of the sand and help, instead of criticising full
>time?

What "full time" do you mean? My hour in the AM and a half-hour most evenings?

>You can get the ear of the VEC committee about as fast as anyone,
>but first you must understand the NEED to do it.

I very much agree that there is a need to improve the tests. I just don't agree that it is necessary, appropriate or helpful to proclaim the entire test to be useless to do so. I believe even less that insulting other hams and making broad, sweeping, and inaccurate statements about the current tests will further the goal even one bit.

And, last but not least, I do NOT believe that telling new hams to just memorize the tests and not to learn anything, as you do here, will help make even the tiniest change in the question pools or their content.

But seeing as you are asking me to get my head out of the sand, may I have your permission to obtain the input you have given the QPC and post it here?

> I get the drift that you would like to just cover up the facts, Ed, and
>pretend that it really is harder for someone with no radio training to
>actually learn the material instead of use word associations.

It is not harder to learn the material than it is to memorize over a thousand questions -- oops, I mean "word associate" over a thousand questions without learning. The advice you are giving new hams to do so is making it harder for them to get a license.

>I would think that W5YI etc suggesting a theoryless license test would
>have given you a clue, but no, your head remains underground.

I disagree with W5YI, and have done so repeatedly.

>Again- we all know the question pols are not going away, so why not work
>to improve them while in your high profile position where you can get
>the ear of the right people, instead of criticising me for speaking what
>I know to be fact?

So now it is MY fault that you are advising new hams to "word associate" the answers without understanding?

How about the following question:

"Did you just pass this test with a combination of learning, memorizing, lucky guessing and hoping that a few subjects didn't appear on your test, or did you just study word-associations without understanding? "

That question seems to summarize our positions pretty well. I am sure we could find a VE that we both trust to ask the next 25 or 50 people who take the tests. If N2EY is a VE, I would accept him hands down as an upright fellow.

>learned that you won't hesitate to lie through your teeth.

Ah, Dick, you are so convinced that no one could ever come to a different conclusion than you that you think that I would lie to you.

I believe that statements by experienced old timers that emphasize the work involved in learning CW (ie, repeated statements that people who don't learn it are lazy), instead of emphasizing the utility and fun of CW, are turning people away from the mode.

Ask youself this: When Morse code testing is removed, which of the following positions on CW do you think will help bring in newcomers to the mode:

CW is a lot of work and those that don't learn it are lazy.

CW is a a lot of fun and those that learn it will be learning a useful mode.

That is the thought behind my statement. You may disagree and believe that statement #1 will bring in more CW enthusiasts, but do you still think I am lying?

Well, that is your opinion and I obviously don't agree with it. And simply too much information (books, records of public debates, government documents, etc) have been lost over the years for any of us to know the real truth.

But, to be perfectly honest, I don't think it really matters at this point. The concept of the racist south is strongly entrenched in this country's culture - almost everything the south does, or has done, is viewed as somehow racist. And, in the end, such a concept insures a never ending divide between the citizens of this country. Since southerners cannot escape this concept (or the endless harsh judgments of the north), secession does indeed become an inviting option. After all, I'm sure you would really not mind getting rid of a bunch of southern racists and I'm damn tired of being viewed as racist just because of my birthplace.

Of course, taking this full circle, perhaps that is exactly how southerners felt in the years leading up to 1860.

Since you're so interested in an honest test between the average pre-restructuring and post-restructuring Extra, why not have both randomly selected as you describe above? Don't try to stack the deck by having only one side randomly selected? In other words, lets really have a fair test. Since you're not randomly selected, the other side should not be randomly selected either. Furthermore, since you're in this newsgroup, others in this newsgroup should also not be excluded. If you consider yourself a good candidate as the representative of the pre-restructuring group (superior to all post-restructuring Extras), I see no reason Cecil would not be a good candidate as the representative of the post-restructuring group.

Well, that is--unless someone allows theirself to be a victim of another person's judgement (however ridiculous that judgement may be); know what I mean? :)

First of all, Ryan, you need to get your facts straight before you go around jumping on people. I have never once disputed the contents of the written part of the exams, so I have no idea where your crazed rant above is coming from. I am not "complaining about the testing procedures," nor am I disputing the number of "questions asked," nor have I said anything about "multiplexes," "fill-in-the-blank," or whatever.

If you truly want "MY" opinion on the written exams, I think they are just fine as they are right now. The intent of those exams are to allow a person to "ENTER" the hobby of ham radio. In other words, they are "entrance" exams, not "graduation" exams offered to prove knowledge or skill in a particular field. If you want evidence of knowledge in the field of communications, then go to college and get a degree (the ham radio exams were not designed for that - they were never designed, or intended, to be equal to degree).

Oh goodness, there's another whole way to respond to the CW/no-CW debate and that is to ask the logical question:

What does a CW test, at the time of application for a license, have to do with all the other topics that the written test(s) is supposed to be measuring? CW capability proves only that one knows CW--it proves nothing in terms of operating skill, knowledge of electronics, knowledge of bandplan, knowledge of FCC R&R, antenna safety, etc.

The second part of the CW debate generally comes from those who rely on CW to be the "measurement" of a universal language. And I ask how? If there are two stations who do not speak each other's language, then how do they communicate beyond the standard RST, Location, Name is? If I don't know Russian and a Russian doesn't know English, how am I going to tell a Russian any more than that, and how can that be construed to be a conversation in a universal language. I submit that the only thing "universal" about CW is S-O-S, and that's about it.

I've said many times on the air and in this newsgroup that I truly admire a good CW operator and enjoy watching the mode in operation. I don't care to just listen to it on the air, I don't care to learn it beyond what I had to know to pass an exam, I don't enjoy the mode myself. I also don't adhere to the philosophy that it proves anything else other than that someone knows CW nor to the argument that it is the "universal" language (if it were I could learn CW and never have to worry about not being able to have a conversation with anyone in the world again!). And, for some reason which I cannot empathize with, those who know and love CW are offended by that. Well, actually, I think those who truly know and love CW are out there using it; and aren't here on some newsgroup trying to stake some invisible territory that they've imagined for themselves.

What's really funny is that if all the "new" hams learned CW proficiently enough and enjoyed it enough to flood the CW portions of the bands with new signals, you'd have all the complainers complaining that those "damned new hams are crowding us out." LOL

If you say so. I just don't know enough about Spanish to get the differences. I'm back in school for another BS degree and had to take the required language course. I signed up for the Spanish class because it fit my schedule better, but could not understand half of what the teacher was saying. Since language is not a major interest, I decided to simple switch classes instead of fighting with it.

Message-ID: <496117c58df29f6a8c214573cade698d.15732@mygate.mailgate.org>
Source record: 18730
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.dx

The opinion of Steve Robeson K4YZ seems to be......

> Now that ARRL has thier own electronic QSL system in place or about to be
>launched, I can't help but wonder how much longer it will be until the art and
>tradition of QSLing will be lost.

Actually I think the "art of QSL'ing" can be enhanced by electronic
means.

First, electronic QSLing is a great deal more convenient, since most of
us already keep electronic logs, to simply click the "QSL = YES" control
on your screen than to fill out a paper card. The recipient still has
the option of turning that electronic QSL into a paper card for his
shoebox
if he wishes.

Second, electronic QSL's can be much more creative than cardboard ones,
both in the graphics, and the content. If I eMail you an "electronic
QSL" I could attach a .wav file of your received signal to let you hear
how good (or bad) your signal sounded at my end. Or I can attach a
photo of my new RV if you also have an interest in such, etc., etc.,
etc. In other words, I can customize *every* QSL to reflect what was
special about that contact. Talk about increasing the "personal
contact" of the QSL process!

Third, for those of us (probably 95% of hams) who already have access
to a computer and eMail, electronic QSLing would be much cheaper than
paper QSLing. Today even an "easy" award like 5BWAS can be a
significant
expense. With a typical 50% return rate, you can expect to need to send
500 cards to get that award. Presuming you include an SASE with each
card, the postage cost alone is over $300.00. For a more difficult
award like 5BDXCC (where you need to enclose IRC's or greenstamps)
the cost of QSLing can easily exceed $1,000.00.

In some cases, electronic QSLing may be the only way a person can
afford to send cards. In fact we've already seen a real-life example
of this situation. Last year an Australian fellow (don't recall his
home call sign) was dispatched to MacQuarie Island by his employer.
VK0M is *very* high on the most-wanted list by DXers, so he obtained
the call VK0MM and operated during his off-duty hours. Since he was
not a wealthy ham, nor part of a sponsored DXpedition, he simply
could not afford to send paper QSLs to the tens-of-thousands of
people who wanted to work him for a "new one". Electronic QSLing
is the perfect solution to this need.

Finally, I do not subscribe to your assertion that it will be *mandatory* for anyone to engage in electronic QSLing if they don't desire to. My guess is that ARRL (or others) will be very happy to provide paper-card output from LoTW (perhaps via the current bureau system) as a service to members who are not on the internet, probably at a cost less or equal to todays "exchange SASE's via snail-mail" convention.

With all kind wishes,

de Hans, K0HB

The written isnt mearsuring any thing either, well unless you want to say is measuring your ability to Memorize. Which really is of no Value, if you have a question on Rules or Band Plans or any other material thats covered on the written, you can just as easily look it up at home or where ever. So really what is the Real Reason for the Written?

2488. Re: Downgrading?

It sounds to me like your evading my question, and forgive that if it sounds confrontational--it is not meant to be. In my opinion (whether the written test material is memorized or not), the written tests do at least attempt to measure knowledge of FCC R&R, bandplan, electronics theories (based on the exam, of course), operating practices, etc. A CW test does none of that.

I agree with you that the written tests, as they exist, and the structure in which they are administered isn't the greatest--though they do at least "take a shot" at some semblance of one's capabilities to safely operate on the air, and within legal limitations. I would love to see a constructive debate and move to change the way in which tests are administered. I don't think having the tests published with the answers is right at all--and cheapens the measurement of my ability to know the material. BUT, it has been pointed out to me that it is the federal mandate that says the question pool must be published; and I don't know how one would get around that.

I don't know what the "real" reason for the written exam is. Conversely, not only is there no "real" reason to test one's CW capabilities--there is no logical reason to assume that one's knowledge of CW indicates *any* knowledge of topics such as are attempted to be measured in the written materials (once again, given that the materials measure anything--memorized or learned).

I do think that if "we", as a ham radio body of hobbyists, are concerned that the hobby is cheapened by people coming into it who are not "serious" about it--then we need to stop and think about what it is that we expect from fellow ham operators. Those who do not meet expectations of most of us who operate legally, cordially, and within accepted guidelines, are often shunned and disappear after a few months--or they "straighten" up their act. And, after all, what more can we ask or demand of a fellow ham but legal operation, being cordial, and operating within accepted guidelines (traditions) of ham radio? Even the FCC R&R are not that stringent! :)

Ed:

We all know that you're a dumbed-down ham, or at least, were one at one time. Now -- compare current licensing requirements to the ones in place in 1983 -- the year I upgraded to Amateur Extra. Are present license testing requirements "dumbed down" from the ones I had to accept, or not? Please give a definite and definitive answer. How you answer will affect the nature of future debate on this topic.

Ed:

I don't feel a need to prove anything at all, Ed. My years of experience has made me nothing more or less than what I am -- an AMATEUR radio operator. However, hams who claim "equality" with me, without having been exposed to as comprehensive and challenging a set of licensing requirements as I have, will have to take their chances -- since I intend to disagree with them!

Ed:

Like every other aspect of the amateur radio hobby, QSL'ing is something which is done *voluntarily* by the ham who wishes to achieve the benefits resulting from this particular action. Nobody can "force" it upon you -- unless you harbor some underlying resentment which makes you feel as if you are being "forced." As with every other issue in ham radio, it always depends on who's ox is being gored.

Hmmm, good point, Dwight, since I am not the one who is actually
claiming that I (Larry Roll, K3LT) am "superior" to Post-Restructuring
hams, from a standpoint of technical knowledge. I'm just saying that
it is much more *likely* that I possess superior technical knowledge,
based on the fact that I had to ascend through the ranks of a much more
challenging and comprehensive amateur licensing system. All I've
ever done is react to the whines of the no-coders and the Post-Restructuring
Hams that seem to *think* I'm claiming actual superiority to them,
whereas all I've been doing all along is just winding them up in my
usual, inimitable style. The only reason I do it is because their reactions
are immediate and gratifying knee-jerk defense of the indefensible,
which is…their dumbed-down status and how it came into being.

73 de Larry, K3LT

If (and that's a big if) there's any superiority (and that's if there's anyone else who feels there's a contest in that department), then the conclusion would have to be made that it has nothing to do with the era in which you were tested, Larry, and has far more to do with how long you have been a ham.

I can guarantee you I could pass all the same tests you took. I can absolutely guarantee you that. I can also guarantee you that you'll have more knowledge in a mode that you use more often and I'll have more knowledge in a mode I use more often. The great thing about ham radio is that we should all be here to share, experiment, compare and better the avenues we choose interest in.

There are Phone, thats all they wanted in the first place, what they really meant by Digital Gurus was, they knew what was required to turn the Mic Off and On, I guess you could call that Digital, 1 is on and 0 is OFF.

Well that explains why CW testing at any cost. After all the endless debates here it just comes down to simply "Fear" that your favorite mode may be banded from the air. It's not going to happen. You will still have plenty of spectrum to use code on the air the same way that people can still drive their antique Model T's down Main Street.

> maybe it will open your eyes.

I don't doubt that a few savants are memorizing word associations just
like I did in 1951/52 for my Novice and Conditional. But, Bruce, that
was *extremely* difficult for me. I flunked the Conditional the first
time. Years later, after a EE degree, I breezed throught the Advanced
and Extra exams which were extremely easy for me. I was drunk as a
skunk when I aced the Advanced exam.

There were less than 100 Q&A to memorize in 1952 for the Conditional.
Now there is a magnitude more. I barely could memorize enough out of
90 Q&As to pass the exam. Now they are having to memorize a thousand
Q&A. If they can do that, they deserve a memorizing medal along with
their ham license. Anyone who can memorize 1000 things they don't
understand is a superior human being. Have you started on those
1000 Russian words yet?

>>> private economy, and led to a record post-war tax level that reached nearly
>>> 21% of GDP.

This is very misleading. The main reasons for the surplus were a)
Social Security, b) freezes in real per-capita government spending, c)
the runup of the stock market, and d) low unemployment. The "percent
of GDP" tax levels quoted, above (a favorite sound bite of the Far
Right) were a direct result of low unemployment, the runup in the
stock market, and ever-increasing concentration of wealth in the hands
of those in the highest tax brackets. It's not as though tax rates
were jacked up any time recently (the last time an increase was seen,
in fact, was 1993).

>>>
>>> Nor should Bush be blamed for Clinton's overzealous regulatory burdens,
>>> where a spate of midnight executive orders penalized businesses and
>>> prevented energy production. More than a year ago, it was the Clinton
>>> Justice Department's decision to break up Microsoft that ignited the
>>> tech-sector debacle. Clinton officials at the FTC blocked the rollout of
>>> broadband connections to the Internet by favoring Baby Bells over local
>>> phone companies, and stopped the capital spending expansion plans for AT&T,
>>> WorldCom, and JDS Uniphase.

My goodness! We wouldn't want to stop monopolies, would we? Everyone
knows lack of competition benefits the consumer! What a nutcase.

In short, it was the Clinton policy of monetary
>>> deflation, high taxes, and regulatory excesses that stopped the long
>>> prosperity cycle.

All the usual Right-Wing drivel. Too bad it's so easily debunked.

The only time taxes were increased in the last 10 years (1993) occured
just *before* the stock-market runup. It also occurred early in the
expansion. What is this guy trying to claim? That seven years later,
the policies caused a recession?

Well Dick, you can always prove your point by memorizing the definitions
for 1000 Russian words. Let us know when you have accomplished such a
"trivial" task. IMO, anyone who can memorize 1000 of anything is a superior
human being and, in addition to a ham license, deserve a memorizing award.
Ham radio should welcome such a superior human being with open arms. We
are certainly presently overwhelmed with less than superior human beings.

From the lack of response, I wasn't even sure that it got posted.
And I have not worked the problem yet. It is simply a common
problem I run into when trying to match my antenna system. I
daresay Dick's, Larry's, and Bruce's solution would be to *BUY*
an antenna tuner. Did any of you guys build your antenna tuner?

When you think about it what better way to promote CW then hearing other Hams speak positively about the mode, compared to those who would say "I hate it" and only learned it just to upgrade. Then they never use it. The point which seems to be quickly forgotten is CW is valuable only if an operator has a use for it. Like you I think CW has enough value that mandated CW testing, in it's present form, is nolonger required. Like any other skill in any other hobby, when you need it you will learn it.

If it's broke today, it was also broke in the early 50s. Memorizing
90 Q&A was extremely difficult for me when I was 14 and taking the
Conditional exam. Anyone who can memorize the Q&A for 1000 questions
is a magnitude better than I was. I think they deserve a special
award if they can prove they memorized 1000 Q&A without any
understanding of the subject matter.

I think I finally understand Dick's strategy. If he can convince
potential hams that memorizing 1000 Q&As is easy then when they
fail to do so, as any average person will, they will stay out
of Dick's personal amateur radio sandbox. It is apparent
that he would like you and I to be out of it as well. Maybe there
is method in his madness. Drive everyone out who disagrees with
him and keep anyone out who might disagree with him. It makes
perfect sense now.

DUUUUUUHHHHHHHHHH, what do you think the "Operator Privileges" part
of an amateur radio license means? It doesn't say "Experimenter
Privileges" or "Builder Privileges".

Bruce wants to be the best operator, Dick wants to be the most
knowledgable ham, and Larry wants to be the best ham. Ham radio
is thus reduced to three hams arguing over who will be the King
of the Ham Radio Hill. Who's the winner gonna talk to?

Ahhhhh but you require the better ham to be better than you in
ALL aspects, not just in a majority of aspects. Thus you have
said that a ham cannot possibly be better than you unless he
betters your Morse code skill. You may be better than anyone
else at one thing, Larry, i.e. you may be the best master baiter
in the world. That doesn't make you better than anyone at *most*
things. I am probably much better at laying my hand flat on an
8 ft. ceiling than you. Does that make me better than you? Only
at laying my hand on an 8ft ceiling.

>I don't feel a need to prove anything at all, Ed.

You try to "prove" it with nearly every post you do, Larry. I just offered you a way to prove it that is more quantitative than your personal opinion of yourself. You readily agreed to do so if we randomly selected a newly minted ham. I proffered that a randomly selected new ham is not the best choice to prove or disprove that you are better than all post-restructuring Extras. Now all of a sudden, your need to prove yourself here has evaporated. I wonder why?

>However, hams who claim "equality" with me, without having
>been exposed to as comprehensive and challenging a set of licensing
>requirements as I have, will have to take their chances -- since I intend
>to disagree with them!

So does this mean that the bottom line is that you may be better than a newly minted ham, but can't prove it?

You have completely missed Larry's point, Kim. His point is that for you
to be superior to him, you must be superior to him in *every* way and for
him to be superior to you, he only has to be superior to you in *one* way.
Now do you get Larry's point?

Most democrats are Keynesians. His theory is that the government should spend more during recession/depression times. That's what Bush is doing and trying to avoid Hoover's "mistake" in 1929. I find it amusing that democrats want to raise taxes while republicans want to reduce them. What's wrong with this picture?

> You can't have your cake and eat it, too :^)

That's a republican principle, not a democratic principle. Democrats very frequently eat their cake and have it too.

Are you now afraid that if they memorize the following correct answer that they won't understand that current equals voltage divided by resistance?

T5C01 @T5B01 (C)
How is the current in a DC circuit directly calculated when the voltage and resistance are known?
A. I = R x E [current equals resistance multiplied by voltage]
B. I = R / E [current equals resistance divided by voltage]
C. I = E / R [current equals voltage divided by resistance]
D. I = E / P [current equals voltage divided by power]

You sure don't want to see them learn anything, do you?

No, if I were a VE, one would have to have the requisite number of correct answers. I do not want to make up new FCC rules.

It is moot anyway; I have never been a VE.

A likely story. Well, no, I take that back -- it is an unlikely story.

Maybe the pre-restructuring Extra who got the Ohm's law question wrong when I
asked him will come forth and confess...

There ya go again, twisting things around. I (we) feel that it was a
mistake to dump all testing over 5wpm just fot the FCC's convenience,
and have stated re[eatedly that current requirements can't be blamed on
those licensed today. The lazy ones are those who have sat on their
butts whining about the requirement waiting for the windfall that has
finally came.

In truth there is basically NOTHING that will bring hams to learn CW in
numbers that will cause it to survive as a viable, effective
communications mode, it will soon disaappear when no longer required.

You surely must be a future spokesman for Cross Field Antennas if you
believe that the E field can be separated from the magnetic field. In
fact, when you change one you change it all. But you still refute my
claim (and that of the ARRL antenna book) that the RF field reduces
inversely as the square of the distance. Shame on you.

You and Cecil are sure getting mileage out of your "russian words"
strawman, There is nothing remotely close to the same concept involved.
When one memorizes the word associations to match answers with
questions, one is using all English words that are memorized such that
when I see that question the only answer that I've seen before is the
correrct one. Of course the distractors are all deleted before the word
association study starts. You already know all this, you just prefer to
keep your head in the sand.

When the pools have questions with answers that consist of all valid
answers- but all the distractors are the answers to other valid
questions, then an improvement can result in the results. It wouldn't be
nearly as easy to work the word association routine. The testee would
have seen all the distractors as correct answers to other questions, and
matching the only selection he had previously seen would be impoossible.

Evidently both you and Ed are just ignorant, as you still don't
understand what I have written repeatedly.

THEY DON'T MEMORIZE THE QUESTIUONS NOR THE ANSWERS, JUST KEY WORDS,,
PHRASES, AND/OR COMBINATIONS SUCH THAT WHEN THEY READ A QUESTION, THEY
RECOGNIZE THE ANSWER AS THE ONLY SELECTION THEY HAVE SEEN PREVIOUSLY,
SINCE THEY DELETED ALL THE DISTRACTORS BEFORE THEIR 'STUDY' AND SO NONE
ARE RECOGNIZED. IT TAKES A FEW TIMES THROUGH THE POOLS TO DO THIS BUT IF
YOU DON'T THINK IT IS DONE YOU ARE SIMPLY WRONG. COMMERCIAL STUDY
VERSIONS OF THE POOLS ARE SOLD BY SOME VENDORS WITH THE DISTRACTORS
ALREADY DELETED FOR YOUR CONVENIENCE.

> imagination can't match your reality.

No, you're not cloistered. You just don't see the large segment of hams
that have no need nor intent to contact you. That is a substantial,
probably a majority, of hams. When you do a presentation at a hamfest
where there are 1,000 hams, you probably draw a maximum of 50
attendees, and few will be those who just wanted the license, thus used
the word association method.

>
> Degreed engineers would be very disappointed at seeing one of my presentations.

Ok, no problem there. But these are people who have a reason to have
contact with you, not the segment who 'just wanted the license'.

>

> radio, as is mine.

Rather sure you're right. I base my views on my years of experience as
a VE and conversations with many other VE's. I guess that doesn't count
for anaything when it comes to analyzing why so many hams get licensed
-higher class licenses- while learning so little that they have to have
help with tne most basic hardward and information about the hobby.

> If the tendency you exhibit here to see what you want to see extends to the
> rest of your life, I can see how you have come to the conclusion you have come
> to.

Much to your dismay, the 'tendency' I exhibit here is facing the facts
instead of hiding my head in the sand. Sorry you feel that way. The rest
of my life is fine, thank you, I just wish that ham radio exhibited as
good characteristics.

So defending myself from verbal assaultsby the likes of drpfrench
constitutes insulting other hams. I see, you would ignore that sort of
activity but not all of us see it that way. Any 'insult' issued from
here was in direct response to insults received. That inlcudes those
shipped in your direction, Sir.

So the fact that I finally discovered how they were doing it, and note
it here instead of just ignoring it all as you do maked me responsible
for it. Yeah. Right.

> But seeing as you are asking me to get my head out of the sand, may I have your
> permission to obtain the input you have given the QPC and post it here?

There is none, and I knew that was coming. Do you actually think they
are interested in what I think? I don't, for a minute. I'm a nobody,
they never heard of me, at least until RRAP. Now if YOU make some
constructive suggestions it might get their attention, with your high
profile League position. So why do you resist the idea?

The RF field strength from an antenna DOES vary inversely with the
square of the distance, unless the ARRL Antenna Book is publishing false
information. Or unless you insist that the power density, E field and H
field can be separated. Just because the voltage field is usually what
is measured changes nothing. The strength of the radiated energy DOES
reduce invesely as the square of the distance, as I said earlier. I also
stated my response was inadequately worded, but of course you,
characteristically, just ignore that.

Really? The digital EME work you crow about was done by high-speed code-tested
hams.

> Do you want
>to allow them on 20m?

Yep - sure! The more the merrier!

All they have to do is pass the required tests and get a General or Extra.
Piece of cake.

I can guarantee you can't pass the tests I took, Kim. Neither can Larry. Does that make me "better" or "superior" somehow? Of course not.

> I can also guarantee you that you'll have
>more knowledge in a mode that you use more often and I'll have more
>knowledge in a mode I use more often.

In most cases, that's true.

> The great thing about ham radio is
>that we should all be here to share, experiment, compare and better the
>avenues we choose interest in.
>
BINGO! Something for everybody! This is the key selling point for ham radio in the 21st century.

But this feature is both a strength and a weakness. The wide variety of things available makes it hard to briefly describe what ham radio "is". And this fact also eliminates the possibility of a single scale of who's at the top of the heap.

Too many folks try to describe ham radio by saying what it isn't. That's not helpful to anyone. It's like saying that the way you sculpt a statue of an elephant is to get a block of stone and chop away everything that keeps the stone from looking like an elephant.

Well then, we'll find 1000 English words of which you are ignorant of
the defintions and you can learn them to prove what you say is true.
Here's the first one: Abbevillian (only 999 more to go).

Technically, one could have to wait up to 12 years after one died before a call could be reassigned: A licensee renews and drops dead later that day. No one notifies the FCC that he's dead. The call is tied up for 10 years until that renewed license expires, then for the 2 year grace period.

As far as I know, the FCC does not tie in their licensing system to the SSA master death index.

Message-ID: <RLCk7.850$Q71.339593@news.uswest.net>
Source record: 18959

Dick:

A considerable part of the test IS memorization. No matter what type of questions were asked (content or format), a considerable part of the exam has to memorization. The tests (Tech and General at least, no comment on the Extra) are, as I understand it, supposed to determine a minimum competency. As with any technical subject, the minimum level just is largely memorization. (Ohm's Law is a good example. The student memorizes the fact that voltage equals current times resistance .. unless you think the students should perform Ohm's experiments again and be graded on their lab notes). It is going to be memorization whether the test is multiple guess, fill-in or essay. It is going to be memorization whether the test is 35 questions long or 300. What is open to legitimate debate is the level of memorization. I certainly find it easier to memorize the formula rather than trying to memorize the answers to specific questions. I'm not sure how I'd even go about symmetrically using word association or some such to memorize numerical answers.

Another, but related issue, is the degree of knowledge the beginning ham should have. Is it important for the beginning ham to know the "Approximately how long is the driven element of a Yagi antenna for 14.0 MHz?" or is it important that the beginning ham have enough knowledge to be able to pick it out from a list of possible answers (thereby demonstrating a knowledge of the principle). BTW, I'd argue that the multiple guess choices being given in feet adds a useless complication to the entire issue -- do hams actually still think in feet and inches rather than meters?

One last and final time - the RF energy present varies inversely as the
square of the distance from the source. You can't separate the E field
from the H field without affecting the RF energy level at any point.
Unless you're selling Crossedfield antennas.

Ed:

Only if Cecil's license expires the same day Cecil does. Otherwise, it's two years after the expiration date, unless someone in Cecil's family officially notifies them of Cecil's room-temperature status. That may be possible in Cecil's case, but how likely is it in the case of the average Silent Key? For an example, go to qrz.com and lookup AA3JM or K3JP. Mason and John have both been gone for over a year now, but live on in the FCC database. I'm sure if you ran through the Silent Key column of several year's worth of QST magazines, you'd find at least half of them still active on the database.

Just fine, Cecil. Thanks for asking! My self-image is not defined by other people's opinion of me as a ham, or as anything else. OTOH, I generally don't judge other people by their ham radio status, either. Unless, that is, they say or do something to call attention to the distinction between us. I cannot remember ever asking another ham's license class during a QSO. I have been asked mine many times, however, so it must mean something to someone!

>implication.

Kim:

Don't look now, but I meant that they'll have to take their chances on claiming equality with me as a ham. I'll be the first to admit that there may be a few Post Restructuring Extras that will be equal to, or even superior, to me in technical knowledge. However, in overall emergency communications capability, they will be severely lacking unless they have gained skill in the Morse/CW mode equivalent to my own. This is just a simple, practical, unavoidable fact.

The Morse/CW mode has benefits and advantages which cannot be redacted into meaninglessness by those who claim that this mode can be completely replaced by "advanced digital techniques." The characteristics of the Morse/CW mode will always be there to be exploited, as long as there are radio amateurs who have the skill, and the proficiency at that skill, to do so. All I would have to do to prove my point is to ask any randomly-selected Post-R Extra to complete a simple, 5-minute CW QSO at 5 WPM. I'll bet you $100 that if we were at the Dayton Hamvention flea market, made an announcement requesting that any available Post-R Extras gather at our table, and then picked the fourth one from the left in the front row, he/she couldn't do it!

Knowing full well that such a "test" will not occur, please indulge my curiosity by speculating on your chances of winning. I'm going to say that if 100 Post-R Extras showed up, we couldn't find three who could accomplish the QSO. I'll further speculate that a much more likely number is Zero. Whada'ya say?

Kim:

I'll have to take you up on that particular challenge. I can assure you with absolute certainty that I know more about talking into a microphone than you know about CW. I don't know how we'll ever put this to a practical test, but for now, I'll leave the challenge open in case the opportunity ever presents itself.

BTW -- I see you haven't done anything about what Riley Hollingsworth pointed out about your callsign -- that with it, you were bringing the amateur radio service "...one step closer to extinction." Hasn't that suggested a course of action to you yet?

Cecil:

Alright, then -- if Ed will agree to it, change the plan to pit any randomly-selected Pre-Restructuring Extra against any randomly-selected Post-Restructuring Extra in a simple test of technical knowledge based on ... what? Questions from the present question pool, or questions common to both question pools? I think the latter is the obvious choice. My choice of the presumed victor in this test will be the Pre-Restructuring Extra -- whomever he or she happens to be.

Cecil:

What about all the Tech Plusses who were "grandfathered" into the
General class under Restructuring? I guess I can't really expect to
be hearing them on 20-meter CW, but where are they on PSK-31?
Since August of 2000, I've only worked one Post-Restructuring
General on PSK-31. I'm sure there's a few more out there, but
certainly not as many as would be required to make finding them
on-the-air a regular occurrence.

Cecil:

Yes. I once "breadboarded" an antenna tuner out of a design in
the Antenna Book. I used it to tune my "DA1RZ all-band longwire"
antenna I used in my dormitory when stationed in Germany my
first time. It worked great -- many times I was told I had the
strongest 80-meter CW signal coming out of Europe. That tuner
got left behind when I PCS'ed from Rhein Main the last time (circa
1989), and from all I know, is still in the attic of what used to be
Building 348 on the former Rhein-Main Air Base, along with 200'
of electric fence wire stapled to the rafters of the attic which was
the antenna itself. Also still there (I think) are a 20-meter co-phased
dipole array, a 40-meter dipole, and a Swingline staple gun. All
that stuff got left behind because I had to pack up and leave for my
PCS two weeks early due to going on emergency leave enroute.

True. I was thinking of the old concept of a flat earth consisting of just Europe, a few limited islands in the Atlantic, and the very vague Americas. But I suppose a "modern" flat earth society would have expanded that concept to include a larger geographical area.

But you have yet to establish either of those (that you "possess superior technical knowledge" or that you ascended through a "more challenging and comprehensive amateur licensing system") as fact. Without that, your comments are merely hyperbole.

> The only reason I do it is because their
> reactions are immediate and gratifying

> into being.

If, as you say, these people are "dumbed-down, they can do nothing about it (the current license system is what it is). So, if you truly believe what you say, why would you continue to rub their noses in it? In the end, since nothing else can be accomplished by what you're doing, the only possible reason for you do it is because it makes you feel good to make others feel bad. Nothing more. Nothing less.

Of course, you and I both know you're full of it - you have offered no proof whatsoever to support your claim that hams today are "dumbed-down" compared to previous hams.

Actually he said that he doesn't hear any new calls on 20 CW or digital. I think he needs a better antenna/rx setup.

btw, the first 24 GHz EME QSO was done back on August 18. Two stations running under 100 W to dishes of 3 meters or smaller. Guess what mode they used.

You need to keep up with the debate, Kim. In spite of the recent BS about the written exams, when compared to the average post restructuring ham (who they feel will never learn code without a test requirement), code is the only truly unique knowledge and expertise they have (any post restructuring ham could develop equal knowledge and expertise in everything else). Therefore, when they talk about people bashing "their" knowledge and expertise, they're actually talking about their knowledge and expertise of code. So, to them, any comment against code is perceived as bashing their knowledge and expertise. Because of that, every person opposed to code testing is a mortal enemy who must be wiped from the face of the earth. Got it now?

No ham radio license exam has ever proven knowledge or skill. All they are designed to prove is a basic understanding of proper operating practices, basic radio theory, basic electronics, and basic safety procedures. Beyond that, knowledge or skill comes after the exams, through actual operation, experimentation, and self-education.

Kim, even the ridiculous (and illogical, as Jim says) can become harmful if repeated endlessly without challenge. For proof of that, just look at the number of ridiculous ideas that have existed throughout history and the harm those ideas have caused. Because of that, I have no desire to sit back and allow a few nasty individuals to promote the concept that all future hams are inferior.

Your argument doesn't even make sense. Exactly what have you learned about radio that is not memorized? There is not a concept or action that you do that does not first require memorization. In fact, you would not even be able to get out of bed in the morning if you did not remember how to do it.

And, by the way, while you're putting down hams for simply remembering the question pool, don't forget to put down all those people who passed the radiotelephone license exams (their question pool is also published - you can buy a copy at the bookstore). Or why not put down all those people who passed their college exams by remembering the contents of Cliff's Notes? Or why not bash little kids for remembering the alphabet and the multiplication table? Memorization is how human beings learn.

I have never said I know it all, If anything I said I am still learning about ham radio. Most of what I have said is that the old hams (Most of those that have been hams for many years) Just do not want to accept any new hams into the hobby. I for one have no use for hams that are of this mindset. I also believe that the ham radio community has no use for these types of hams. When hams like this exposed to the non ham public, all they will do is keep new people out of the hobby.

Sure you did. You memorized formulas and probably the answers to many of the questions. In memorizing the correct answer: Q: What are three good electrical conductors? A: Gold, silver, aluminum you learned that gold, silver and aluminum are good electrical conductors. The distrators all contain non-metals, so you probably also learned that metals are good conductors.

Of course, some here offer that you could read the question and word associate the answer and not learn anything in the process. In this case, it is easier to learn that metals are good conductors (and that metals are not insulators to help with the next question) than it is to try to think up some mental trick to word associate the answer without learning it in the process. :-)

>remembering the question pool ...

There are more correct answers in the Tech and General question pools than there were sentences in my 1963 study guide for the Novice and General.

>Memorization is how human beings learn.

With great effort, one could probably memorize a large set of information without understanding. Cecil's example of 1000 words of Russian (presumably in Cyrillic) is a good example. For the life of me, I can't figure out why Dick and Bruce are trying to talk prospective hams and upgrades into word association instead of learning as a way of passing the test. I keep posting examples from the pools of why that it not true, but they keep seeing the world through their uniquely colored glasses.

Yeah, but that has been going on since time immemorial. I am sure that some old timer was berating Larry for being a dumbed-down Extra because Larry didn't have to drive 100 miles to an FCC exam and draw schematics. Larry, of course, knew that the old timer was wrong and that he would turn out to be a decent ham.

The difference, though, is that the Internet was not there for that old timer to make a fool of himself in front of thousands of people. Larry probably didn't hear the unkind words that old timer had to offer. Instead, Larry was able to continue with his belief that ham radio was a lot of fun and that it was populated with decent, helpful people. And, with a few exceptions, it is.

What percentage of emergency communications do you believe is conducted using Morse code? What percentage do you believe is conducted using voice? If one is going to practice emergency communications skills, it would make more sense to devote that practice to the mode that is actually used for emergency communications. That CW-only op like me that checks into a voice net is apt to mungle things pretty badly. I am too slow with phonetics.

>frequency anymore.

Perhaps you should become a bit more well rounded in Amateur Radio, Larry. The FISTS crowd only wants to talk to other FISTS folks (CQ FISTS), so I can't say as I have talked to more than a handful of them.

That, at least, is a bit more accurate than the original post and I find it quite believable that a group of people that set out to talk only with each other would end up talking only with each other. Thanks for the clarification.

Slide up 2 kHz and work a few of the QRPers. They generally still believe in the old traditions of Amateur Radio, such as being friendly and encouraging to newcomers.

> THEY DON'T MEMORIZE THE QUESTIUONS NOR THE ANSWERS, JUST KEY WORDS,,
>PHRASES, AND/OR COMBINATIONS SUCH THAT WHEN THEY READ A QUESTION, THEY
>RECOGNIZE THE ANSWER AS THE ONLY SELECTION THEY HAVE SEEN PREVIOUSLY,

We understand what you are saying, Dick. Neither Cecil or I believe it to be correct in more than a handful of cases. In those cases, the applicants who did manage to pass that way did it the hard way. It is much easier to learn the underlying material and apply 6th-grade math to working out the answers.

Now, as to your "key words" theory, here are a few correct answer/distractor pairs, with the correct answers and distractors chosen from different questions:

A. The Federal Communications Commission
B. The Federal Communications Commission

A. None
B. None

A. CW, RTTY and data
B. CW and data

A. All amateur emissions priveleges authorized for use on this band
B. All authorized amateur emissions priveleges

A. No identification is required
B. No identification is required

A. CW
B. CW

A. 1500 W PEP output
B. 1500 W PEP output

A. Data
B. Data

I could go on, but the pool is filled with such pairs, where the correct answer for one question is the distractor for another. To work out a "word association" for these questions one could NOT use the technique of reading only the correct answers and recognizing it as the only one they have seen. It would be a lot of work to work out a word association between the correct question and the answer without carefully working out the complex interactions

between the questions, the answers, the distractors and other questions, answers and distractors.

One could, I suppose, associate "direct-printing" with "RTTY," without learning that the name the FCC associates with narrow-band, directy printing telegraphy emissions is RTTY, but to me, the latter is much easier to remember, and in doing so, I would have learned the fact that the question is intending to teach. I would NOT be able to recognize the correct answer RTTY because that is the wrong answer for several other questions.

I will, if you like, continue to post examples from the current pool why I believe that you are wrong that most hams are word associating the all of the answers without understanding and why I believe you are wrong that doing so is the easiest way to pass the tests.

>SINCE THEY DELETED ALL THE DISTRACTORS BEFORE THEIR 'STUDY' AND SO NONE
>ARE RECOGNIZED.

DON'T YOU THINK THAT IT IS A GOOD IDEA THAT HAMS LEARN THE CORRECT ANSWERS INSTEAD OF LEARNING THE WRONG ONES?

>associations that allow you to recognize the question and its answer as
>pairs while still knowing nothing whatever about the subject matter.

That certainly isn't true in the question I posed about the way that the E field varies with distance from an antenna, Dick. It is much easier to learn that E varies as 1/D, or that if the distance is doubled, the field strength is half, if it is quadrupled, the field strength is one quarter. That is a LOT easier than trying to word associate a bunch of numbers (ie, if the distance is half and the question is about field strength, the correct answer is 30 V/m, but if the distance is one quarter and the question is about power density, the correct answer is 18 V/m...) Trying to do it the latter way would be he hard way, IMHO.

I will post some more examples from the pool about why I believe the way I do. Would that help?

> The RF field strength from an antenna DOES vary inversely with the
>square of the distance, unless the ARRL Antenna Book is publishing false
>information.

No, no, no, no! The field strength varies with the inverse of the distance in the far field. The ARRL antenna book and the General Class question pool has it correct.

> Or unless you insist that the power density, E field and H
>field can be separated.

Of course they can be separated. They are often measured separately.

> Just because the voltage field is usually what
>is measured changes nothing.

Whether one is measuring the E or the H fields, the field strength varies inversely with distance.

>The strength of the radiated energy DOES
>reduce invesely as the square of the distance, as I said earlier.

That is NOT what you said earlier. You said that the field strength from the antenna varies as the inverse square of the distance and that is incorrect. The fields vary inversely with distance. The power density varies with the inverse square.

> I also stated my response was inadequately worded, but of course you,
>characteristically, just ignore that.

I didn't ignore that, Dick; I responded, just like I am doing so now. You are still incorrect; you still don't understand the question. The field strength from an antenna varies with the inverse of the distance in the far field. The power density varies with the inverse squared.

You would not feel it correct to interchange voltage and power in a discussion about circuits. Why do you feel is acceptable to interchange "field" and "power density" in a discussion about electromagnetics?

If you would like to get an answer that you believe, post this to rec.radio.amateur.antennas and see what some of those guys have to say.

Correct, but in that case, use the correct term "power density" or even "RF energy" as you have done. If you use the term "field strength" its meaning is that it refers to the E or H field. Saying that the field strength from an antenna varies as 1/D^2 is incorrect.

>association study starts. You already know all this, you just prefer to
>keep your head in the sand.

At least that is better than soaking my head, now, isn't it.

I think that Cecil has pretty much admitted that his Russian example is a bit extreme. He has posed a new challenge -- word associate 1000 words of English with 1000 other words of English. Oh, and about 20% of the words will be the wrong answer for other words when you are given the multiple-guess question about the word association. Think doing that would be a "cake walk," Dick?

That is even easier than trying to word-associate the very complex interactions and word relationships in the question pool, because one would have to go through the pool, pick out words that are unique to one question, and associate them with answers that may be the distractors for other questions.

It is a lot easier to learn the underlying material, don't you think?

> When the pools have questions with answers that consist of all valid
>answers- but all the distractors are the answers to other valid
>questions, then an improvement can result in the results.

I agree. Right now, that appears to be the case, or at least pretty close, in about 20% of the techncial questions.

> It wouldn't be nearly as easy to work the word association routine. The
testee would
>have seen all the distractors as correct answers to other questions, and
>matching the only selection he had previously seen would be impoossible.

As opposed to virtually impossible now. :-)
Prove me wrong and take the 1000-word challenge. It is as easy as you say, you could do it in a few hours and really make your point!

>Here's the first one: Abbevillian (only 999 more to go).

That is still easier than trying to work out the appropriate word associations for the current question pools, Cecil. But I would go one better. For 1000 words, make it simpler yet:

Cat - gasoline
Rock - ant
Tent - armpit
etc. for 1000 words.

Then give a test for which the correct associations for one word appear as distractors for other words about 20% of the time.

Dick, do you think you could memorize those 1000 simple word associations as easily as you claim that people are "word associating" the much more complex question pool?

Nope, that is incorrect. The ARRL has had input to the Question Pool Committee. Are you admitting that you don't know what that input it, but are criticizing ARRL for it anyway?

> That's standard practice on multiple choice questions, isn't it? and
>YOU didn't know that?

I would apply that technique to a test that was generated by a human, knowing that there is a human tendency to go for the middle ground, and the test generator would probably have exhibited it to a greater or lesser degree. (Ask a group of people to pick a number from 1 to 4 and most will pick 3.)

But most VEs know that the order of the distractors is randomized by a computer when the tests are generated, so there would be no advantage to picking B or C in taking an amateur exam.

And YOU didn't know that?

They do not, but if you send the FCC a death certificate or obituary, they will
vacate the call of a deceased ham. It is then generally available 2 years from
the date the ham died.

A number of vanity calls were obtained that way.

One last and final time - here is what you said, Dick, quoted from your
posting above:

> > > The RF *field strength* from an antenna DOES vary inversely with the
> > > square of the distance, ... (emphasis mine).

That is a false statement, Dick. Don't try to wiggle out of it by
changing the wording from "field strength" to "energy". The RF field
strength from an antenna DOES NOT vary inversely with the square of
the distance.

I didn't. My Globe Scout didn't come with a microphone or a XTAL
for the phone band. The only reason I got a Conditional was because
my Novice expired.

>Can you recall any situation where "the hard way" became
>the best way?

Sure. If I had someone take my driver's test for me, it certainly would be easy
for me. The hard way would be to take it myself. The first time I didn't know
that red means stop the hard way would definately have been the best way.

I am sure there are many more examples. It all depends on context, like much
in life.

>salmon is bigger than a shark.

Remember, we are setting out to find a way to prove that Larry is superior to all post-restructuring Extras. I find it a bit unexpected that such a superior being would propose that the best way to do that doesn't involve himself, but, being inferior (because I took a test that is easier than today's tests to obtain all Amateur priveleges), I guess I just don't understand.

Larry, can you explain? To this inferior mind, the easiest way to test the premise is for you to be one of the partipants. We could, I suppose, select the other factor in the experiment at random until we had enough data to make a statistical analysis, but a more accurate way would be to select the candidates that we feel are the one that disprove your hypothesis.

Now, to be really accurate, we could quantify just how inaccurate your statement is, but it would take a fair number of tests to prove it to a reasonable degree of stastisical certainty.

Anyone better at statitics that I? How many tests WOULD it take to have a 95% confidence level as to the number of post-restructuring hams that Larry is superior to? This must be pretty important to Larry, because he keeps proposing different ways to test it.

2704. Re: fill-in questions (was:New Blood Yea Right)

Newsgroup: rec.radio.amateur.policy
Date: 2001-09-03 14:54:41 UTC
From: Paul Friedman <paulfriedman@uswest.net>
Message-ID: <RQMk7.49$xP1.86540@news.uswest.net>
Source record: 18897

From the 19th edition of The ARRL Antenna Book. Page 23-3.

The energy from a propagated wave decreases with the distance from the source.... A measurement of the strength of the wave at a distance from the transmitting antenna is its field intensity, which is synonymous with field strength......

If free space, the field intensity of the save varies inversely with the distance from the source once you are in the radiating far field of the antenna. If the field strength at 1 mile from the source is 100 millivolts per meter, it will be 50 millivolts per meter a 2 miles, and so on.....

Because of the relationship between voltage and power, the power density therefore varies with the square root of the filed intensity, or inversely with the square of the distance. If the power density at 1 mile is 4mW per square meter, then at a distance of 2 miles it will be 1 mW per square meter.

Then why do you keep convincing them that the easiest way to pass the test is
to word-associate the answers without understanding?

Time for some more examples. Please explain the word-association necessary to
get the following questions right:

T6A02 @T6A12 (A)
Which symbol of Figure T6-1 represents a fixed resistor?
A. Symbol 2
B. Symbol 3
C. Symbol 4
D. Symbol 5

T6A04 @N6A10 (A)
In Figure N6-2, which symbol represents a single-pole, single-throw
switch?
A. Symbol 1
B. Symbol 2
C. Symbol 3
D. Symbol 4

T6A06 @N6A08 (A)
In Figure N6-1, which symbol represents a fuse?
A. Symbol 1
B. Symbol 3
C. Symbol 5
D. Symbol 7

T6A08 @N6A09 (D)
In Figure N6-1, which symbol represents a single-cell battery?
A. Symbol 7
B. Symbol 5
C. Symbol 1
D. Symbol 4

T6B03 @N6B04 (D)
In Figure N6-1, which symbol represents an earth ground?
A. Symbol 2

B. Symbol 5
C. Symbol 6
D. Symbol 8

T6B04 @N6B06 (D)
In Figure N6-1, which symbol represents an antenna?
A. Symbol 2
B. Symbol 3
C. Symbol 6
D. Symbol 7

T6B05 @N6B07 (D)
In Figure N6-3, which symbol represents an NPN transistor?
A. Symbol 1
B. Symbol 2
C. Symbol 3
D. Symbol 4

T6B06 @T6B01 (A)
Which symbol of Figure T6-2 represents a fixed-value capacitor?
A. Symbol 1
B. Symbol 2
C. Symbol 3
D. Symbol 4

T6B07 @T6B06 (C)
In Figure T6-2, which symbol represents a variable capacitor?
A. Symbol 1
B. Symbol 2
C. Symbol 3
D. Symbol 4

Should I post some more?

Yes, in between the yelling you actually learned something. I have known that for about 4 or 5 years, since the gentest program was put into place. That is why the "D" answer is occasionally "All of these answers are correct" instead of "All of the above." The "All are correct" answer/distractor could appear first.

Larry, you lost me after "they'll have to take their chances on claiming equality to me as a ham." There are several reasons for this:

1 - You are the only one on this newsgroup who has ever had any comments to the effect that you are such a high quality ham (and I doubt I'd hear your virtues extolled on the local repeaters or on HF anywhere, or anywhere in hamdom). So, to be of the opinion that anyone is beneath you is only to lift yourself up in your own eyes

2 - Your statement of "they'll have to take their chances" implies that you believe your viciousness towards others actually has any other affect than to reap disdain upon yourself. You don't actually think that anyone feels slighted or belittled by you, do you? That would be hysterical!

3 - You and few others seem to believe that ham licensing is some kind of scoring system that measures one's smarts and value as a person in the hobby of ham radio. It is you and those few others you would have to have your contest with--because the majority of others and the rest of us just roll our eyes when you start in

4 - Your insistence that your CW skill makes you an above-average emergency communication ham is nothing more than evidence that you are not involved in any way with current emergency communication actions, nor would your "skills" be the primary need in an emergency. I lay no claims as to its being useless--but I do claim and state that CW is only ONE of many, many modes available. If I were to put an emergency response team together and I was in your local area where I've had the opportunity to have lots of exposure to you--and especially if I'd been in this newsgroup seeing any of your posts--I can assure you, Larry, that you would never even be called for service

5 - In response to your, once again, lofty self-delusional dream contest, I could care less about what the results would be, Larry, because you would be the only one sitting at the table at Dayton--well, unless your follower Dick was there. Your competition, Larry, is your own.

You are so entrenched in your bitterness about the world that you actually think you have some kind of affect on others. That is hysterically inaccurate, but you are welcome, as always, to your delusions--they are all you have.

No, Larry, it hasn't. You choose to believe that I am supposed to feel some sort of absolute dread about what you, Riley Hollingsworth, or anyone else may feel about my callsign. What you choose to forget or realize is that your "judgement," or anyone else's, of my callsign is your right--but has no bearing on my choice and decision to have it.

I can't help but wonder why every time you are backed into a corner with truthfulness, you choose to get on the callsign bandwagon once again. You are pathetic.

It would be very good if amateurs in Mannheim, Germany to check this system out and document the lack of interference! I suspect the ending statement is not correct, since I can hear computers using twisted wire networking for over a mile away!

How are they getting away with that with CE regulations, or are they not enforced for German goods sold and used in Germany???

> In Mannheim, Germany, local power company MVV Energie AG expects to

Your ignorance is flaring up again, Larry. Tech+ hams were not
"grandfathered" into anything under Restructuring. Techs who were licensed
prior to (what is it, 1987?) were grandfathered into General Class, not all
Tech+'s.

You probably also don't know that any Tech (under the new restructuring
system) who has passed the 5wpm CW test has virtually one year to take the
General written, or they have to take the 5wpm CW test again.

Dwight, you forget, I was here in the middle of that debate. That is why I asked the question. There is no codetest-hating newcomer who wants to bash older hams for their knowledge and expertise. Got it now?

Not true, Dwight.

At the very least, the code test(s) prove(d) that the person who passed them had the specific skill(s) - at least at the time the test was passed. For example, when I took the Extra code test, I copied almost the entire 5 minutes of 20 wpm code in legible block letters. Then I sent recognizable Morse on a straight key for almost a minute. If that's not proving a skill, then what is?

> All
>they are designed to prove is a basic understanding of proper
>operating practices, basic radio theory, basic electronics, and basic
>safety procedures.

I would say that the entry level tests are meant to prove those things. The higher-level tests are meant to prove a bit more. But even the highest level tests aren't meant to prove complete kowledge - and they never were.

>Beyond that, knowledge or skill comes after the
>exams, through actual operation, experimentation, and self-education.
>
Not exactly. One of the goals of the ARS is that hams' knowledge and skill levels increase beyond the test levels after the tests are passed.

I'm not a Buddhist, but I think one of the most "together" people on the planet today is the Dalai Lama. (Who woulda thunk that one of the most spiritual humans of our age would bear a striking resemblance to Phil Silvers? Appearances ARE deceiving!). Does the Dalai Lama goes around proclaiming how "superior" he is? Nope. He doesn't have to. Besides, if people don't see it, his telling them won't change their minds.

It's like telling a joke - if the alleged comedian has to explain it, it's not funny.

Yep - they call it the "Big Lie" method of propaganda. Nazism and racism are
two good examples. "Reflected power can burn up your rig" is another.

> Because of
>that, I have no desire to sit back and allow a few nasty individuals
>to promote the concept that all future hams are inferior.
>
Witness the power of a single word. I think the current tests are not as
difficult to pass as the ones I took. Part of this is due to the tests
themselves and part is due to the testing methods. Different eras, different
tests and diferent methods. Does this mean I was tested to higher standards 30+
years ago? Sure. Does it mean I'm "superior" or "better" TODAY? Of course not -
even though I can guarantee that new hams today can't pass the tests I took.

It's what happens AFTER the tests that matters.

Lessee, I know a ham who has made a Field Day site available for the local club
for several years. "Made available" doesn't tell the whole story, because this
ham did stuff like cooking, site preparation, organization, and all sorts of
support functions vital to a successful FD. How many QSOs did this ham make?
What license class does this ham hold? Who cares?

No.

I first got a ham license (1967) because I wanted to join the folks I heard on 75 meters running AM. Interesting discussions, beautiful signals, and the predictable nature of the locals helped me determine how well my homebrew receiver worked and whether my "improvements" made any difference.

Back then a Novice license only gave one CW privileges, and only for 2 years, nonrenewable and "nonretakeable". So I went on 80 and 40 Novice CW with my peanut whistle.

Something happened in the time I was a Novice, because once I had the higher-clas license in hand my interest was primarily CW - so much so that I did not get a 'phone rig for almost ten years.

WHat I should have said is that I did not simply read the Q and A's and memorize the answeres. For me, I find this very hard to do. Word association I find to be very hard for myslef. That may be why I have several weeks of study on the extra axam, and more than likely several more. This is why the claim that Bruce made way back in this thread "New hams are lazy" pissed me off. If that where have true, I would have given up on the Extra exam long ago. I am not all the eager for the extra band with. My goal is to upgrade my VE status so that I can be of better service in the VE sessions in my area.

In the context of ham radio, Dwight, and letting someone's judgement affect how we feel about ourselves, I choose not to be affected by them. You may wish to. That is your choice. It does not mean, by the way, that I would or would not choose to respond to their comments--it simply means I don't share their opinion of me, or you, or whomever.

By the way, that a few nasty hams *could* "promote the concept that all future hams are inferior" doesn't say much for ham radio, then, does it? Because if all it takes is those few nasty hams to convince a major number of opinions, then there's not much to be said for the true goodness of ham radio. I guess what I am trying to say is that ham radio, and its operators, stands for itself. And, I can't help but feel that for anyone who is informed, the "nasty" hams are in the minority and mostly ignored.

I don't know that I have seen "code-bashing", Ed. I do know that I have seen people get very offended by being called names--and attack the name-caller. But, wouldn't it be pretty silly to bash a mode? For instance, I absolutely disagree with CW being used as a part of the licensing process for ham radio. Now, to someone who loves CW, feels it is a tradition in ham radio, and feels it is absolutely needed in the testing structure, I would be wrong in their eyes. What historically happens here, in this newsgroup, is that the two people who differ in opinion lose sight of debating the topic and get down in the mud with name-calling, etc. They are not bashing CW, they are bashing each other.

Tom:

You'r correct. There is little or no "balance" in that electric wiring and
it goes
everywhere. As you mentioned, it's surprising that the EU allows this since
their CISPR regs, equivalent to our Part 15, are much tougher than in
America!

Deutche amateur radio associations better get on this case fast. Using
power wires for signalling at high frequencies is bad for us radio folks.

I would memorize the question, then the right answer with it. During the test, I wouldn't even have to look at the graphic. I don't know if that's called word-association, but it's the method I would use to prepare for the test. Former experience shows me that even doing it that way, I get some wrong, because I don't think I have ever gotten a 100 on a ham test. But, that's what I would do.

This Power Line Transmission system (PLT) will be disastrous for HF hams
especially with overhead powerlines in the area. I believe that in the UK
PLT has been dropped ,same in a number of other countries. PLT would wipe
out HF comms.

OK, Dick, here's the questions that I posted in one particular post yesterday, in the Downgrading thread:

What does a CW test, at the time of application for a license, have to do with all the other topics that the written test(s) is supposed to be measuring?

The second part of the CW debate generally comes from those who rely on CW to be the "measurement" of a universal language. And I ask how?

If there are two stations [using CW] who do not speak each other's language, then how do they communicate beyond the standard RST, Location, Name is?

If I don't know Russian and a Russian doesn't know English, how am I going to tell a Russian any more than that, and how can that be construed to be a conversation in a universal language.

I haven't seen an answer yet.

>
>Are we really to believe that a 1X2 has been asked his licence class "many
>times" on the air?

Ed:

For my first seven years as an Extra, my call sign was N3CRA. During
that time, I was asked my license class several times on HF phone.
Once when I tried to check into a phone net using that call sign, some
1x2 said "Go back to 2 meters!"

>If you really did work only one post-restructuring
>General,
>then all of those who didn't know that a 1X2 could only be held by an Extra
>class were pre-restructuring Generals or above?
>
>Or perhaps you meant that the post-restructuring General asked you the
>question many times -- yeah, that's the ticket!

I've never been asked my license class since getting my 1x2. I was
asked a few times when I was WR2F, but usually by old timers, many
of them with 1x2 call signs themselves. One guy on CW kept returning
my call as "W2RF." I had to spell out Whiskey Romeo Two Foxtrot
in CW several times, and explain the 2x1 configuration, before he
"got it," which I'm not entirely sure he did. One of the reasons I went
for a 1x2 Vanity call was that I knew it would be completely "Geezer
Compatible" and I wouldn't have to worry about that anymore!

>2am to retrieve it from the Interstate?

Cecil:

Oh. You're talking about one of the outside mirrors. I've never had
one of those fall off on me. I've had to re-glue my inside rear-view
mirror to the windshield, using one of those kits they sell at the
auto parts store. In fact, I've had to do it several times -- once on
my old Ford Taurus, and on all three of the Plymouth Voyager
mini-vans my former employer owned. I'm sure replacing an
outside mirror, especially on a car like my new Corolla with
electric-adjustable mirrors, is no longer a user-friendly proposition,
and would require the expensive intervention of the dealer. Hopefully
it would be covered by your insurance, minus the deductible.

>Morse code?

Ed:

If radio amateurs lose the capability to effectively employ the Morse/CW mode, that amount will always be zero -- even at times when that particular mode would be a very practical and logical choice.

>What percentage do you believe is conducted using voice?

Virtually all, except for an occasional smattering of Packet, usually in the form of APRS. I can also effectively employ those modes, and RTTY, PSK-31, and a few others.

>If one
>is going to practice emergency communications skills, it would make more
>sense
>to devote that practice to the mode that is actually used for emergency
>communications.

I'm not going to sit here and disagree with that just for the sake of doing so, Ed. However, there are certainly a lot of potential situations where the ability to fallback to Morse/CW could keep communications open when other modes fold up. I've had that experience several times in my ham career. You can deny it or ridicule it all you want, but that doesn't change the facts.

>That CW-only op like me that checks into a voice net is apt
>to mungle things pretty badly. I am too slow with phonetics.

I have the ICAO standard phonetics memorized, and can use them as comfortably and skillfully as anyone I know -- in spite of the fact that I am a non-phone op on HF. I used to be one on AF MARS during my "phone days." I could revert to that skill anytime.

Ed:

No, lately it's just about the sole content of *your* participation here. My status seems to have become an obsession with you in a way it never was with me! I know how it started -- I decided to wind up a few Post-R Extras who were whining about "equality" -- and you went off on a tangent about my "status." All I want to know is -- are you going to get over it, or what?

Ed:

I'm not squirming away from anything. I'm driving away from it at top speed! I could care less about proving my "superiority" over Post-R Extras. If you and Cecil are so concerned about it, then just take my word for it, and get on with your lives. For the umpteenth time, my "status" as a ham is not something I think about on my own time. I only respond to it here in this newsgroup, because the No-coders and the Post-Restructuring hams whine about it virtually non-stop. I could care less about it, they care about nothing else. Therefore, if you are as obsessed with my "status" as they are, you'll just have to suffer, because there's nothing I can do to help you.

What the heck difference does it make? Lots of Extras have
2x3 calls. I debated whether to get my first call back, WN5DXP.

Kim:

Then why, praytell, did you go to the trouble to write him to solicit what
you obviously expected would be his endorsement of your choice? You
were seeking validation from him, that's why. When you got just the
opposite, and were, in fact, quite rightly accused of taking ham radio
"...one step closer to extinction," you now respond in your usually
dismissive and defensive manner. Nothing new here.

>What you choose to forget or realize is that
>your "judgement," or anyone else's, of my callsign is your right--but has no
>bearing on my choice and decision to have it.

Obviously not -- wherein lies the problem. As Riley said, anyone with
a young child who would encounter you and your callsign on the air
will have to reconsider whether ham radio is the right activity for that
young person to get involved with. To the extent that your callsign may
turn them away, we are, indeed, "...one step closer to extinction."
Truer words were never written -- and they were written about YOU!

>I can't help but wonder why every time you are backed into a corner with
>truthfulness, you choose to get on the callsign bandwagon once again. You
>are pathetic.

No, Kim, the callsign "bandwagon" is being driven entirely by YOU --
and your stubborn refusal to get rid of a call sign which portrays ham
radio operators, and particularly female ham radio operators, in a
negative light. I'd be careful about who you're calling "pathetic" -- lest
you walk past a mirror!

>Tech+'s.

Kim:

Don't look now, but Tech Pluses of the Pre-R Era were indeed
"grandfathered" with respect to their 5 WPM code testing requirement.
All they had to do to get their Nickle General was pass the written
test. I know many of them who upgraded exactly that way.

>You probably also don't know that any Tech (under the new restructuring
>system) who has passed the 5wpm CW test has virtually one year to take the
>General written, or they have to take the 5wpm CW test again.

I am not aware of that, because that is not the case. The VEC's are
supposed to accept *any* evidence of that ham having passed a 5 WPM
code test at *any* time in their ham "career," even evidence such as a
copy of a callbook page showing them listed as a Novice or a Technician.
If what you're talking about is a new requirement, then no, I am not
aware of it. Can you provide a reference?

>> I guess I can't really expect to
>> be hearing them on 20-meter CW, but where are they on PSK-31?
>> Since August of 2000, I've only worked one Post-Restructuring
>> General on PSK-31. I'm sure there's a few more out there, but

>>
>> 73 de Larry, K3LT

>Oh, I forgot, every ham must operate as you do or they are not "your equal."

Well, they could at least operate the way they said they were going to
operate, in order to justify their desire to have the code test requirements
reduced and/or eliminated.

>Thank goodness I have no comparison to the way you operate!

I'm sure you don't, Kim! I'm sure you don't...

Sure, but the thing is you normally don't get your 5BWAS/5BDXCC in a day.
Those bigger awards take years to complete, which means that your costs are
distributed over those years, which significantly reduces their impact on
your budget.

If I want to try my hand a doing EME some day, which happens to be one case where it is needed, HOW FAST do I need to learn CW Dick? Same thing if I want to try my hand at working lets say 2m Aurora. Is spending a few months to learn something new in the hobby to fast or two slow for your taste? I though if I ever wanted to learn CW, and what ever time I take doing it, was for me to decide. I didn't realize I had to do it your way because it's the only way Dick.

I for one have 6, 10, 15, 17, and 20 meters diaploles that I made reading the ARRL antena book without the help of an elmer. I also have a 3 element 2 meter beam and a two meter ground plane antenna I built by reading my book. I am one of the New Hams that some of the old hams are afraid of.
Of course I had a ham freind check out my soldering job on my first diaplole to make sure I did not mess it up.

THere is nothing wrong with asking questions of an elmer, one of the things that is taught in schools is that if you have a question regarding the material in your book, ask the teacher.

The first paragraph of that post wasn't "jumping" on you, and if you took it that way, I guess I don't know what to tell ya..... the post was meant to the group in general. If I wanted to take up whatever issue, I would have chosen "Reply To Sender" instead of "Reply To Group." It was meant to add to the thread. In other words, I would have emailed ya direct as opposed to taking up personal issues with you in the group as a whole.

The purpose and intent of the message was to finally get some constructive answers to what apparently MUST be a problem for some, the "dumbed down" tests and apparently us "dumbed down" licensee's.

I have adjusted the tone for a slightly lower tone that what I beleive to be
a normal tone. The CPO does not have any indicators whatsoever for the Hz
tone it is set at. I am using a software proggie to check my retention and
using the oscillator and it seems to be getting better.

Well.... things are not like the 50's anymore, sorry to break this to you, some of us are having to work multiple jobs etc, and in my particular case, I have to work typically till 4am on saturday mornings and to drive 2 hours to a testing session with about 2 hours of sleep, it is absolutely no wonder why I have been having a hell of a time passing the code test. Damn, in that case, I am barely awake.

The original intent of the post here I believe had to do with not "dumbing" down the written tests any further or anything similar to that. Just to adjust the times of when events happen. Things are not like the 50's anymore where everyone worked from 9am-5pm, was up at the crack of dawn, and in bed by the crack of dust.

Guess the true problem with ham radio is that it apparently must only be a retiree's hobby....

Ryan

I believe it is ONE of the MANY draws that there is available within the hobby.....

So much to do, including HF.

Ryan

Yup. They were all there on 14.313 Labor Day.

The Cowboy, music players, ole pottie-mouth, all
the JYZ sand fleas, all the PBM sand fleas, all the
MXL fleas. All that was missing was that mentally
lacking indian wanabee from Indiana and the NC
pig farmer what talks like a retard. Yup. Yup. Yup. Yup.

Larry, you are such a fool. I wrote to Riley Hollingsworth and posted his response here to prove to you and the guy (I can't even remember his name and he's not on the newsgroup any more) that there was no way either of you were going to "get the FCC to rescind my license." I couldn't care less who endorses my callsign; it's not there for that reason. I don't seek validation from anyone.

What a fool.

I will take a crack at these, Kim.

>What does a CW test, at the time of application for a license, have to do
>with all the other topics that the written test(s) is supposed to be
>measuring?

As much as all the other topics have to do with each other. What do the questions on RTTY operation have to do with all of the other topics.

There is one important distinction -- at least for now -- you must get 7/10 of the questions on the content of the sent CW message correct if you want to operate on HF. You can get 0% of the safety questions correct and still be a ham.

>The second part of the CW debate generally comes from those who rely on
> CW to be the "measurement" of a universal language. And I ask how?

Very few people see Morse code as a universal language. (Please, let's NOT start that thread up again!) It is generally better than voice at communicating across language barriers, by using the same techniques used on voice, such as both ops knowing common English ham words, both ops knowing numbers and the pronounciation of the alphabet in English, both ops knowing the phonetic alphabet and Q signals. It does have an advantage, though, that all of the pronounciation issues do not exist in Morse. Of course, any digital mode could accomplish the same thing.

The advantages of Morse code is not that it is a separate langauge. It does faciliate communication between those who share little common language. It does perform better than voice modes under noisy conditions, although it is less effective than most digital modes under the same conditions. Its beauty and usefulness is in its simplicity, lending itself to homebrew in a way that would be harder to duplicate.

Hey, does that mean that Morse code enthusists are too lazy to homebrew more complex digital equipment that would work better? :-)

Thanks, Paul,

That seemed straightforward enough, with examples that pretty much match the question I posed.

I can't imagine many hams misunderstanding that text. Apparently, though, it can happen, so I will talk to the editor to see if there are any improvements.

Dick or others, can you offer any improvements to that text that would make it more clear that field strength varies inversely with distance and power density varies inversely with distance squared?

From: Dick Carroll dixie@townsqr.com

>> I would memorize the question, then the right answer with it.

Sure, I believe it. Here are some of the things that she memorized from the first few pages of the Tech question pool. In what way do you think learning these things to be wrong?

Who makes and enforces the rules and regulations of the amateur service in the US? -- The Federal Communications Commission (FCC).

What are two of the five purposes for the amateur service? -- To increase the number of trained radio operators and electronics experts, and improve international goodwill.

What is the definition of an amateur station? -- A station in the Amateur Radio service used for radiocommunications.

What is the definition of a control operator of an amateur station? -- Any licensed amateur operator who is responsible for the station's transmissions.

I could go on, but do you really think that people with enough intelligence to memorize over 1000 questions would read those questions and answers and not understand the answers?

>For instance, I absolutely disagree with CW being used as a part of the
>licensing process for ham radio.

Why is it so absolute? CW is still very much a part of ham radio and some form of testing should be included, IMHO. Either a test that grants traditionally CW only priveleges (lower 25 kHz of 80, 40, 20, 15 or 10) and/or a CW test with a reasonable number of questions that are included in an overall score, just like the questions for any other mode would work for me.

>They are not bashing CW, they are bashing each other.

Yes, I think that the bashing on both sides is being done by people who like to bash. I think of people like N2EY and W3RV who support CW testing but manage not to have to personally insult others to make their points. Frankly, if all of the CW-test proponents were like them, I may not feel that it may be time for the FCC to end it once and for all, just to end the debate and the bashing being done by both sides.

There are plenty of them, not just one, who ARE more intelligent, more knowledgeable, and skillful than I was, or am today. I have no doubt of it.

But I can still guarantee that they can't pass the exams I took (and passed). Neither can you, Cecil.

>You are the absolute
>pinnacle and human evolution has gone downhill since you were born?

Aw gee, Cecil, you're gonna give me a swelled head!

No way am I the "pinnacle" of anything. (Heidi Klum - now THERE'S a pinnacle of something!) Nor do I claim to be. But I can still guarantee that new hams today (and many of the old ones) can't pass the exams I took (and passed). That includes you, and Kim, and Larry too, Cecil.

It's not a reflection on anyone's intelligence, knowledge or skill, just a simple fact.

No wonder these guys dont know anything, lets see Control isnt that someone who has control of something, boy these questions are really mind teasers.

Well out of the 5 Questions so far not even memorization is required.

Source record: 19052

w1rfi@aol.com (W1RFI)
shared these priceless pearls of wisdom:

->Why is it so absolute? CW is still very much a part of ham radio and some
form
->of testing should be included, IMHO. Either a test that grants traditionally
->CW only priveleges (lower 25 kHz of 80, 40, 20, 15 or 10) and/or a CW test
with
->a reasonable number of questions that are included in an overall score, just
->like the questions for any other mode would work for me.

Well, now *THERE'S* a twist on an idea that I've advocated for years. I absolutely agree with you, Ed. If you can miss all the questions on RTTY and still pass and still run RTTY, or the safety questions, or the bandedge questions, why not two or three questions on the CW portion, multiple guess, and if I don't choose to study code, there is a 1 in 4 chance that I'll get one of them by pure guess. Same as any other part of the exam.

I like it. I'll even abandon my "hell no code" stance if you can get the powers that be to buy into it.

In phone I would imagine it would be difficult, unless there are established euphemisms each could use that would allow an exchange of information. The question I asked, though, is from the perspective of CW being claimed as a universal language. If CW is a universal language, then please explain how an every day conversation (in CW) can take place between two people on CW? That is, a conversation that goes beyond standard RST stuff.

Well, let's rephrase the absolute. I disagree with a "mode" being singled out to use as a testing method. Get rid of using a mode (any mode) as a testing method, and ask written questions about that mode of operation--along with other modes of operation.

>
> >They are not bashing CW, they are bashing each other.

That is because people such as N2EY and W3RV are true in their love of CW. They actually *do* enjoy the mode, are zealous about it, yet don't use an objection to their way as a justification to bash others.

Ed, it seems to me that you are attempting to separate the components
of a radiating RF wavefront when that can't be done. Of course it can be
done for the purposes of measurement and calculation, but the E and H
fields must absolutely both exist at their respective levels and the
seperate considerations represent only the human factor of
"consideration". Yes, you used the E field calculatin correctly in your
"test question" that I didn't answer and that you swear I got wrong. My
response, inadequately worded as it was, was an attempt to suggest to
you that you should perhaps show the relationship of the RF wavefront
level at half the distance since it gives a better picture of how the RF
signal actually dimninishes with distance, instead of considering only
the E field. (The term Power Density as used in the ARRL antenna book
seems to be virtually unused by hams who are not also engineers).

As I said that is encouraging as it shows that there is an effort being
made to improve the question pools. Also I note that the structure of a
number of the questions since restructuring seems to have been changed
to require knowledg of the subject. I knew all along it could be done if
the right people wnted to. It IS encouraging.

Please allow me to rephrase that insult. "Leland, I really hate to
break the news to you, but should you find yourself in circumstances in
which you need to use CW to respond to an emergency, or to perhaps save
your own arse there is simply no way that you can do it anywhere near
fast enough to help. Learning CW to even the most basic level of
communciations takes some weeks at best, especially when you have
resisted such a travesty with every fiber of your being for your
lifetime. Sorry, you really need to pool your resources with a few
others of like mind and see if you can come up with sufficient funding
to buy a clue".

That's where you are 180 degrees out of phase with reality. That's the
sort of activity we wish to see in newcomers. There's too little of it
these days.

> Of course I had a ham freind check out my soldering job on my first diaplole to

Sure. Mothing wrong with bilding it yourself, either, instead of just
whipping out the plastic. Wish it was more common.

>meters, I usually have to do some quick mental math to envision the distance.

I get the impression that the degree of comfort one has "envisioning" MKS units is inversely related to age, or at least the time since one left school. The choice of units may hence be more convenient for those writing the test questions than they are for some of those who take the test.

No matter what units you can most easily envision, however, I still agree it is a useless complication since the usage of units in the test, and in ARRL handbooks for that matter, is irrationally inconsistant. If I asked "What are the frequencies of the edges of the amateur 65 foot band" you'll probably have to convert it in the other direction. And wouldn't it be neat if the total length of a half-wave resonant dipole for the center of the 40 meter band was about 20 meters long? Or how about, "You measure a power density of 86 uW/m^2 at a location which is 1000 feet from an isotropic radiator. What is the total power being radiated?". The units used probably match your preferences for "envisioning" the two quantities, but you still have to do a useless conversion one way or the other to find an answer. Since I remember the spped of light in a vacuum is 300 Mm/s, the fact that the length of a resonant half-wavelength dipole in meters is 143/f(MHz) tells me something interesting about their relationship, while knowing 186,000 miles/sec and 468/f(MHz) is more like trivia unless you spend some time with your calculator.

The flopping back and forth between English and MKS units, with no discernable rules for which quantities should be expressed in which units, could only make sense to people who somehow just became used to doing it that way. It would probably be better to pick a consistent set of units for calculations, letting those that prefer something else for "envisioning" the result do the mental conversion for the final answer, then the current hodge-podge.

In the overall scheme of things, CW is another mode of several used in
ham radio. What newcomers never realize, and the oldertimer who "just
want to get along and ignore all the CW bashing by the newcomers"
whohave been spoonfed all the NCI drivel, is that CW the nmode is the
most basic of all radiocommunications methods, requiring as a minimjum,
a single active device oscillating to constitute the transmitter, a
device which can also easily be configured to work as the oscillating
reciever. You don'te see any of this on the tests either, I note.

>
> The second part of the CW debate generally comes from those who rely on CW
> to be the "measurement" of a universal language. And I ask how?

If you had bothered to do any reading on the history of the hobby, you
would know that there is a complete body of signals that serve to convey
exact meanings regardless of the language of the sender or receiving
operator, who learns many of them and keeps a complete chart at hand at
his operating position for use of those he hasn't learned. It is indeed
a limited language, but if you believe that well trained CW operators
can't carry on meaningful communications while not knowing each other's
native language it just displays your ignornace on the subject. It has
been going on for near a hundred years.

There is no "universal language". (Except money, perhaps!)

What CW does is help bridge language barriers. The same is true of any
text-based mode, (like PSK31) of course.

A unique feature of CW is that it has certain "language like" properties when
used by skilled operators. For one thing, it's aural rather than visual. For
another, different "speakers" are readily identified by signal characteristics.

73 de Jim, N2EY

What percentage of CW QSOs do you think take place wiht a single active device oscillatoing to constitute the transmitter?

>a device which can also easily be configured to work as the oscillating
>reciever.

Of those, what percentage use the same active device easily configured to work as the oscillating receiver.

Seeing as it is so "easily configured," do I presume that we will see a W0EX-authored article on the circuit appearing in one of the ham magazines relatively soon?

>You don'te see any of this on the tests either, I note.

What question were you asked on your test about how to easily configure an oscillator transmitter to also act as a recevier?

>> Yes, in between the yelling you actually learned something.

> Yeah, that isn't unusual for me. Sorry if it is for you.

Why would you add the last comment, Dick? Would it be helpful if I posted the long list of things I have learned within Amateur Radio? I use many of them on almost a daily basis at my job. Nearly everything I know about RFI I learned from others.

If you meant something else by that other than a gratuitous insult, please explain.

>As I said that is encouraging as it shows that there is an effort being
>made to improve the question pools.

There is a lot of effort being made to improve the question pools, and, quite contrary to some of your allegations and other gratuitous insults, I have personally played a role in that process. Last time around, I suggested that there be questions asking what all of the formulas are. This time around, I intend to submit a series of questions that will, if accepted by the QPC, add additional questions about the formulae-based material, hopefully enough that even you will stop bellowing (remember the posts where you felt a need to use all caps -- that is internet bellowing) that everyone is memorizing the answers to the questions instead of learning simple concepts and applying 6th-grade math.

> I knew all along it could be done if
>the right people wnted to. It IS encouraging.

It has been happening all along, but you just presumed it wouldn't and insulted one of the very people working to make it happen. Of course, you base your opinions on a lot of assumptions, from what I can see.

Now, having said that it is happening, I cannot speak for the QPC and no matter what is proposed, it is ultimately the QPC, not me or ARRL, that decides the content of the test. That is what I was referring to in the post that you responded to saying that ARRL was doing nothing wrt its actions with the QPC.

>I read QST and CQ every month and if it was reported I missed it.

Oh, and we had this discussion here about a year ago and I was quite clear in a number of cases that the order of answers was randomized. You even responded to most of my posts...

>Yes, you used the E field calculatin correctly in your
>"test question" that I didn't answer and that you swear I got wrong.

I eventually agreed that you had not answered the question, but had asked the question that said essentially "why don't you tell them that it <the E field> varies as the inverse of the distance squared. You have been arguing with me ever since that the field strength from an antenna varies as the inverse of the distance squared.

> (The term Power Density as used in the ARRL antenna book
>seems to be virtually unused by hams who are not also engineers).

Correct. Most hams use the term "field strength" when they mean "power density." I once did and was quite appropriately criticized by those in the know when I did so at a presentation on RFI. From what I read of your post, you were making the same error.

>Ed, it seems to me that you are attempting to separate the components
>of a radiating RF wavefront when that can't be done.

Sure it can be done. In a circuit, one can separate voltage and current in a circuit -- each exist as separate entities and be changed by circuit conditions. It is as valid to discuss voltage and current as it is to discuss power.

> how stupid the Tests really are.

Those were, of course, the first few questions from the Technician question pool -- the entry level exam for ham radio.

But if you want to take the opinion that the tests are all stupid, I can see why you would not want me to go on. So, I will.

Try:

T7A05@N7A09 (B)
In Figure N7-1, if block 1 is a transceiver and block 3 is a dummy antenna, what is block 2?
A. A terminal-node switch
B. An antenna switch
C. A telegraph key switch
D. A high-pass filter

T7A06 @N7A11 (D)
In Figure N7-1, if block 1 is a transceiver and block 2 is an antenna switch, what is block 3?
A. A terminal-node switch
B. An SWR meter
C. A telegraph key switch
D. A dummy antenna

T7A07 @N7A13 (C)
In Figure N7-2, if block 1 is a transceiver and block 3 is an antenna switch, what is block 2?
A. A terminal-node switch
B. A dipole antenna
C. An SWR meter
D. A high-pass filter

T7A08 @N7A15 (B)
In Figure N7-3, if block 1 is a transceiver and block 2 is an SWR meter, what is block 3?
A. An antenna switch
B. An antenna tuner
C. A key-click filter
D. A terminal-node controller

Dick, can you give us the word-association combination that will let people memorize the above without any understanding of the topic?

Aww, dang it, Dick, you let the cat outa the bag! (Sort of). Maybe someday
those tests will be given again, but today they aren't being given.

They can't PASS the tests because they can't even TAKE the tests. Those tests are not available, so comparisons are just wild speculation.

>What does a CW test, at the time of application for a license, have to do
>with all the other topics that the written test(s) is supposed to be
>measuring?
>
Very little - that's why it needs its own test.

There are three main reasons for the questions on the written tests:

1) To address known problems in the ARS. For example, years ago the FCC cited a lot of hams for out-of-band operation and poor signal quality. New questions were added to the tests on these subjects.

2) To advance the "incentive licensing" concept of hams learning more. A General class ham can use every band and mode that an Extra can use, and at full power. For that matter, Techs can do all authorized band/modes above 50 MHz. So the added technical questions on the higher-class tests arefor IL reasons (why is a Tech technically qualified to operate legal limit SSB on 50.3 MHz but not 14.3 MHz?)

3) To insure that hams can be held responsible for certain knowledge (primarily regs and safety). This puts the burden of responsibility on the licensee, not the FCC. If I'm out of band, I cannot claim ignorance of FCC rules, because questions about the band edges and the need to stay inside the bands are on the current tests. If I can't pass the current tests, I'm not qualified to be on the air.

Do the current writtens GUARANTEE that a ham knows the material? No way. The FCC doesn't think they need a guarantee, though.

As for code testing, the ONLY reason it still exists in the USA (according to the FCC) is because the international treaty requires it and the FCC will not go against that treaty requirement. They've stripped code testing to the bare minimum that can reasonably be considered to meet the treaty, and they won;t do anything else until the treaty changes. FCC made that perfectly clear in the restructuring R&O. FCC simply said that they no longer see ANY reason for the code TEST other than the treaty. For now, their hands are tied.

Will the treaty provision for code testing go away in 2003 as a result of the WRC? Maybe - maybe not.

Yes, you do seem to have a need to try to convince people that I say what I say only because I have to, eh, Bruce?

Unfortunately, you seem to conveniently ignore what I have posted here repeatedly -- that what I post is my own personal opinion. The "party line" has changed little over the past 5 years -- ARRL supports the retention of Morse code for HF access in the US. My personal opinion about Morse code and its future are my personal opinion. My working for ARRL does not mean that I do not have personal opinions nor does it end my right of free speech to express them.

If you think that you can convince people that ARRL has chosen Ed Hare to represent its secret agenda by arguing with Dick on rrap, you are welcome to give it a go. Watching you try should be amusing. :-)

>If radio amateurs lose the capability to effectively employ the Morse/CW
>mode, that amount will always be zero -- even at times when that particular
>mode would be a very practical and logical choice.

If ensuring that Amateurs have adequate emergency communications capabilities
were your real goal, I suggest that it would be more effective to seek rules
changes that mandate that Amateurs actually maintain a station and that it be
capable of operating for 24 hours without the power grid. That would be useful
more often than Morse code is the logical choice.

The fact that you don't make such a suggestion says to me that you have another
agenda at hand.

Could it be that you are looking for affirmative action for your favorite mode?

>However, there are certainly a lot of potential situations where
>the ability to fallback to Morse/CW could keep communications open

>change the facts.

Why would I want to deny it or ridicule it? It has happened to me. I just
disagree with you that the amount of time that it happens in emergency
situations warrants mandating that all hams learn Morse code.

I could even live with fill-in-the-blank, and/or 1 minute of solid copy, accepting the standard of the day as the best way to test CW.

>I like it. I'll even abandon my "hell no code" stance if you can get the
>powers that be to buy into it.

It is not ME that will get the powers that be to buy into it, Jim, no more or less than you. The ultimate power on this will be the FCC and you can bet dollars to donuts that once the matter is dropped as an international treaty, the FCC will be asked to consider changes to US rules. When that happens, I hope every ham that has an opinion will file comments with the Commission. Organizational comments are fine for some things (protecting 2.4 GHz, for example), but in this type of rulemaking, it is important that the FCC hear from more than ARRL, NCI, W5YI, etc.

I think that hams should also influence the organizations that will ultimately file with the FCC. ARRL and NCI members should respectively (there are a lot of both) let their leaders know what they want to see the organization do. Ditto with major and smaller organizations, such as QCWA, FISTS, QRP ARCI and local clubs, etc. I don't believe that there is any direct way to influence the W5YI group; to my knowledge, there is no accountability to a membership in that organization.

So it is not me that will decide this matter, it is the FCC, through a process of law and individual and organizational comments.

Morse code modes are unique in one respect -- they require the personal skill of the applicant, rather than knowledge. Deciphering phonetics in real time, too, requires that same type of skill. IMHO, Morse code testing should include an opportunity to copy sent text and a reasonable number of questions about the content. I think the number of questions should be on a par with the questions about other popular modes and that it be put on a par with other popular modes by rolling those questions into the overall score.

The "knowledge" of and "history" of CW could be included in the written
tests. I think most hams (even the new ones) in the hobby realize that CW
is a minimalist mode of operation--that is, most hams who are in any way
serious about the hobby). It should be in the tests.

I have never read anything about the history of the hobby and, if the "language" is that common then it should not take a read of the history of radio to discover this "complete body of signals" as you put it. Also, you say there is a chart. Surely this chart is published somewhere? I'd be very interested in having such a chart. Do you know of a source for this chart.

Dick, for goodness sake, CW is not useless as an emergency mode--it is not
useless for any reason it is used. However, the "common" mode of choice in
most emergencies is voice, with maybe some form of digital being next, CW
probably being last. If "everyone" is walking in one direction, why would
you choose to walk in the other? I can just see a ham sitting down and
sending CW over the air to relay a message from the Fire Chief. The Fire
Chief, I can nearly guarantee you, doesn't know CW--and needs some sort of
self-assurance that his/her message has been sent successfully.

C'mon.

I understand the feeling of the "music of the language" Jim. But, let's say
I don't know the "language" of a foreign station. I hear this person's
signals now and again and, yep, I sure can tell that it's got to be that
same station I hear because I can distinguish the fist. What "language"
like properties is this person going to use that will make me understand
that what he is sending--other than something like CQ, etc.?

Then, it must be your opinion that the CW mode test does not measure anything other than CW skill? I think like you, that the only reason the CW mode test was ever there was to comply with international treaty agreements, and to "follow along" with the concept of having trained operators who could meet the same standards as those they may encounter from a government entity, such as the Coast Guard. CW is no longer emphasized, so the government no longer requires radio operators with advanced license privileges to have such a focus.

Goodness, I hope not. The main reason why is that the misery lovers will then love the anger and contempt they feel as they blame the entire new class of hams for the destruction of ham radio. It's bad enough as it is.

Not at all to the extent that it is the other way around. Let me ask you this; if you live in a northern town, how many southerners live in your town? This town (Myrtle Beach) is filled with people who have moved here from northern states. They have no problems finding employment, an apartment to rent, invitations to social events, friendship, or whatever. And you can see almost the same thing in most any southern town. Can you honestly say the same for the southerner who moves to your town?

Many thousands of northerners come south for vacation during the winter each year (we even have a name for them - "snowbirds"). How many southerners go north to vacation (to ski, hunt, fish, camp, or whatever)?

You can claim what you want, but the facts speak for themselves. Southerners don't go north (to live, to vacation, or for any other reason) because they know they're not welcomed. Even the ones who have never been have heard from those who have.

Landlubber? Me lad, while me boat may not be impressive (a 22'
aluminum utility), it is king's barge compared to that old rotting
barnacle bait you call a boat. Even a tired old broken down pelican
would fly right past that old scow to find a more respectable place to land.

He is talking about the list of Q signals, Kim. They are used on voice and on
digital modes, too. There is no list unique to CW.

>If I want to try my hand a doing EME some day, which happens to be one =
>case where it is needed, HOW FAST do I need to learn CW Dick?

Zero words per minute would do it. A VHF-only tech can operate using Morse encoding. A recent 2X QRP moonbounce QSO used QRSS (very slow Morse) and long-term integration to complete the QSO. The operators never touched a key or heard the signal, which was probably buried about 25 to 35 dB in the noise level in a 500 Hz bandwidth.

Even at that, Morse encoding is NOT the best encoding for such work. I think that one of the multitone modes with a real slow data rate would probably do much better.

Might be fun trying a spread-spectrum moonbounce contact. I have a DSP-10 on order, and can't wait to start playing with it.

>if I want to try my hand at working lets say 2m Aurora.

This may be one mode where OOK CW is the ideal mode. I don't think that digital signals could stand the severe multipath and sudden phase shifts.

Probably the best reason to learn Morse code is that you can construct single-device oscillators in a few hours and put them on the air. That is a lot easier than constucting digital radio systems.

I've seen it occasionally also. But it is usually posted by someone outside the normal circle of people who post here, often to troll all hams (not just the code crowd). I've never noticed the regulars doing that (other than to perhaps directly irritate Larry).

> tests are meant to prove a bit more. (snip)

Not much more. Even the questions on the higher-level tests are
somewhat basic compared to skills needed for a commercial, military,
or industrial, career using those skills. For example, a career in
electronics would obviously require more knowledge than is required by
the questions relating to electronics on those exams.

> > Beyond that, knowledge or skill comes
> > after the exams, through actual
> > operation, experimentation, and self-
> > education.
>
> Not exactly. One of the goals of the ARS
> is that hams' knowledge and skill levels
> increase beyond the test levels after
> the tests are passed.

Isn't that basically what I said? The only point we differ is the
concept of a goal versus a requirement. Considering the exams don't
really directly test the skills, I would say that learning after the
exam is more of a requirement than just a goal. For example, if you
are going to do anything with electronics in the ARS, then you will be
required to learn more than just what was tested on the exam (the exam

doesn't require a person to even pick up a resister, for example). The same is true for almost anything else on those exams - if you actually want to actually do something (not just answer test questions), you will be required to learn after the exams.

Since those tests are no longer available, that is obviously a play on words designed to give the false impression that you know more than today's hams. Make those tests available again, and I'm fairly sure most hams today could pass them.

The Norwegian FCC-equivalent (www.npt.no) made a series of measurements
early this year, and concluded (not surprisingly) that the unwanted
emissions were far higher than allowed.

The conclusion was that the operators will have to reduce the level of
emissions by 30-35dB (!). If this is not possible, operation of these
kinds of networks will be prohibited.

The news letter (Norwegian version, only):
http://www.npt.no/norsk/Nyheter/Elforsyningsnett.html

It's not a matter of what I think, Kim. I can obviously control that. It is a matter of what others think (others that may not have the knowledge or experience with ham radio that you and I have). And I've seen these negative attitudes slowly drifting outside the ham radio community (into other forums where the people involved often know very little about ham radio). If we are going to prevent that, then we need to end those attitudes here (within the ham radio community), before those attitudes do become an issue elsewhere.

> By the way, that a few nasty hams *could*
> "promote the concept that all future
> hams are inferior" doesn't say much for
> ham radio, then, does it? (snip)

Kim, since I know you have an interest in emergency communications, let me give you an example relating to that. Several months ago, I watched an older ham from a local club get up in front of a meeting of local civil defense officials and talk for almost 30 minutes about the expanded use of hams during natural disasters. Half way through that presentation, he actually advocated the sole use of General class license holders and above because Technicians simply didn't really know enough about radio to be useful. He went on to claim that Technicians didn't really have a firm commitment to ham radio and therefore would not be reliable in those situations. Of course, what he didn't realize is that the current director, a good friend of mine, was a Technician at the time. And he also didn't realize that he had been invited to speak at my urging (I was the one who was advocating more involvement by local hams). Again, this is not just about the thinking within the ham radio community - this attitude is slowly drifting outside ham radio.

It's simpler in meters until it's time to order the aluminum for
the driven element. Then it absolutely, positively has to be in
feet and inches!

Im sure they would, because the Answers would also be Provided. Since they are providing the Q&As ahead of time, why not just let them take any Material they wish with them to the testing site. Or better yet just send them the Test and when they have it filled in just send it back. Or even better than that just let them go to a WEB site from there home and take the Test on line. But set a time limit on how long they have to finish the Test once they start, maybe a Week or Two.

You are about 200 years late for metric time. Refuse all you want to use metric measurements. The problem, of course, is that there is no English equivalent to a Watt, Ampere, Volt, Ohm, Joule, Coulomb, etc.

The metric system is simply arbitrary where the English units are at least people-sized so it is like being lost in a house built for 13-foot people -- nothing is familiar. But you do it anyway and obtain your revenge by driving the rest of the world nuts with keys and clicks.

And the English system is Force-length-time where MKS is mass-length-time which can cause some interesting problems in Engineering.

In the long run of things, it is no harder than the discrepency between the Imperial Gallon and the American gallon aka the British Wine Gallon back in the days of travelling to Canada. King Charles couldn't get a tax increase so he made the gallon smaller. As we were a nation of rumrunners and bootleggers, guess which became standard.

Ultimately it is like code tests: until you get the testosterone out of the problem, you ain't gonna pass.

Thanks for the info Ed, but the point I was trying to make with Dick was how much time does HE expect somebody to take to learn CW. I have to admit you can't learn it in 5 minutes to use for emergency comms. But in the example I used for EME, is spending a few weeks or a couple of months too much time, for his taste, for one to learn CW when needed to pursue another interest in the hobby. I think Dick engaged the keyboard with his finger tips before thinking things through first. I hope he doesn't do the same thing with his code key. 8-))

Here are a couple of references I have bookmarked on DSP theory on the web. Since you have an interest you may find the material useful. For one of them you will need a Post Script viewer and the other one for PDF files.

http://www.dspguide.com/pdfbook.htm

I did it on 6m SSB phone once, and it wasn't a picnic either. Nobody on 2m was using phone, it was all CW, and even at that it was hard to pick out of the noise.

> Probably the best reason to learn Morse code is that you can construct
> single-device oscillators in a few hours and put them on the air. That is

> lot easier than constucting digital radio systems.

Also a lot quicker than putting together my AO-40 ground station. I have the down link working OK with manual tracking. Now all I have to do is build/buy the up-link 70cm antenna. When I'll get around to it I don't know. I would consider the "L" band up-link except I have already spent $650 on the "S" band down-link already. I need to save a few bucks, and using the 50 watts on 70cm out of my 847 will do it with the right beam antenna. All this junk I have to assemble, and disassemble when I'm done. I live in an apartment so I can't leave anything sitting outside. You guys who have a yard to stick up a tower with antennas don't know how good you have it.

dump your Buick for a real car, one with a manual transmission,
hopefully a foreign car, to repent for your years of senseless
patronization of the inferior American auto industry.
****
WHOA THERE!!!!!
Now THAT stopped my sandbagging. First off, I can drive a manual with best
of them from farm tractors to a road tractor. Second, the Buick line has
consistently been in the top-rated marques. Third, I will NEVER, NEVER,
EVER own a foreign car even if it is made right here--especially those of
Japan. Before you accuse me of racism, it has nothing to do with
nationality,
rather I seem to remember a certain battleship sitting on the bottom of
Pearl
Harbor. There were friends of my family that died there. I will not
dishonor
their memory by buying a Honda, Nissan, Toyota, or Mitsubishi! That's how
I feel, and there's no changing it!

I have driven GM, both auto and stick, since 1966, particularly Chevrolet.
I
have NEVER had any issues with them or other GM make. I have a Chevrolet
station wagon I bought in 1987 new. Oh, yes, it died at 199.468 miles, but
not thru fault of its own. A spark plug dropped an electrode down in the
cylinder
and caused it to bypass oil and lose compression. It will still start and
run, and I intend to replace the engine and keep going. At the point it
suffered this incident, it was running fine--no clicks, ticks, no operating
difficulties whatso-
ever. It was running just as well as the day I drove it off the lot. Every
Chevy I have ever owned has given me great service with few mechanical
problems and reliability right up there with the best of them.

This weekend, I was talking with another vendor at a hamfest who had just
bought a new Toyota truck. The owners' manual says NOT to put any radio
equipment in it whatsoever without consulting the dealer. It will set off
the air
bags!! He contacted the dealer, who didn't know how to correct this. The
dealer called the tech rep for Toyota and HE doesn't know. Meanwhile, he is
stuck. I see Chevrolet and GM vehicles, and of course, Ford and Chrysler,
with amateur equipment in them all the time.

Inferior American vehicles--I don't THINK so!

Enclosed herein is a copy of an enforcement letter sent to some twerp in Maine over his childish on-the-air antics.

I LOVE the FCC's last paragraph! >>WE<< have been telling idiots like this to take the following suggestion for YEARS, now the FEDS are doing it TOO!

73

Steve, K4YZ

QUOTED FROM ARRL WEB PAGE:

August 20, 2001

Mr. Timothy M. Smith
RFD 3 Box 3695
Skowhegan, ME 04976

Re: Warning Notice: Amateur Radio license WA1HLR

Dear Mr. Smith:

The Commission has reviewed monitoring information from your station on July 26 and 27, 2001 on 3.885 MHz. The transmissions from your station indicate an alarming lack of understanding of the basis and purpose of the Amateur Radio Service. The transmissions are characterized by sound effects such as belching, coughing directly into the microphone, and sound effects of other bodily functions probably best left undescribed. Furthermore, the repeated transmission of "testicle-ing" is not only juvenile but absurd as well.

There is no place in the Amateur Radio Service for the conduct reflected in the transmissions. It degrades the Service for other users and will not be tolerated. Please review Sections 97.1 (basis and purpose of Amateur Radio), 97.101 (general standards) and 97.113 (prohibited transmissions) of the rules.

Section 308(b) of the Communications Act of 1934, as amended, gives the Commission the authority to obtain information from a licensee regarding the operation of his station. Accordingly, you are requested to respond to this letter within 20 days of its date. Please be advised that if this type of operation is not corrected, we will take enforcement action against your license, ranging from proceedings to restrict your operation to non-voice modes to designation of your renewal application for an administrative hearing to determine whether it should be granted.

Tape recordings of the transmissions described above are available should you need to review them. Finally, you may also wish to review Section 95 of our

rules, which sets forth other, less regulated, radio services available to you.

END QUOTE

How would you know? You've never owned anything but American cars,
right?.

I have about 700,000 miles driving experience since licensed in 1957.

I have had at least a dozen American cars including Fords, Chevys,
Mercurys, Pontiacs and Dodges, and another half-dozen Hondas and
Datsuns.

The Japanese cars were better designed and assembled and they gave much
less trouble. They are better cars, period. If you simply don't like
them, that's ok. Lots of Americans do.

I understand and respect your feelings about Pearl Harbor, however I
would remind you that the perpetrators of that treachery are now almost
all dead and gone, and present-day Japan has owned up to its past and
become one of the most westernized of all foreign countries. In other
words, they have become much like us.

I have no ax to grind one way or the other, just calling 'em like I see
'em.

Dick, I'm not an amateur, but I've been around radio and electronics
a bit longer than you. For months you've been mumbling about the
"sham" of modern testing but never once have I seen you make any
sort of constructive criticism or suggestions for corrections. I see
little wrong with the test questions or the answers...but I see a lot
wrong with the attitude that only the old ways are "correct."

The FCC requires a test to fulfill its overall lawful task of regulating
US civil radio. That test is not to satisfy some long-timers,
individually or as a group. Newcomers do not owe anything to
the already-licensed. The test is merely a government requirement
to obtain legal permission to transmit RF at certain frequencies
using certain modes.

OOK CW is not a required mode of RF modulation over and above
all other modes. Any amateur licensee may use OOK CW as
they wish within the allocated frequencies for their class.

Why are those who wish to eliminate the code test considered
"bashers" of amateur radio? Do you believe that the whole
purpose of amateur radio is to preserve CW on HF? Do you wish
to reset all amateur radio testing to 1960 standards? If so, why?

Dick, I'm older than you and "bash" only those who want to set
all regulations, class, status, etc. to their individual achievements.
When did you assume "authority" to regulate what all newcomers
are "supposed" to think, feel, or believe?

I've been away for six weeks and am weary of seeing the same
argument and counter-argument on the inverse proportionality
or inverse-square proportionality thing. Why should all the rest
of the readers have to put up with the stubborness on both
sides. Ed, you are right, but Dick Carroll will never, ever admit
he is wrong. He can't.

>In the examples of the questions about field strength and power density that
>are on the General exam, the correct answers for some of the questions are
>used
>as the distractors in other questions. This "word-association memorization"
>theory of yours doesn't hold up to analysis of the pools.

I doubt that the format of the written tests is the 'real' subject.

It seems to settle down on one group of long-timers being "expert" and "knowing it all" and refusing to admit ignorance about subjects discussed in public view. I'm no longer sure which group of long-timers is the "correct" group. :-(

Whichever, the stubborness of the argument doesn't show a good reason for newcomers to bother with entering amateur radio...ARRL or not.

I think that Dick is rationalizing long-ago claims of "dumbing down."

I find that a common human rationalization but wonder about Dick not being able to answer enough material to pass the First Phone on the first try. I did without having any benefit of previous BC radio experience or without any answers to test questions...or without having to answer "really deep" questions on broadcast antennas. :-)

Most regulars have already taken serious exceptions to Dick's attitude...and been rewarded with vitriol and denigration. :-)

>While you criticize those of us taking the, ``new'' exams, has it ever
>occured to you that maybe the exam isn't the ultimate test of one's
>knowledge of radio? Whose to say that once I pass the exams (assuming
>I do pass) I'll stop trying to learn? I think, frankly, that that's
>pretty presumptuous and rude.

Dick is one of those who believes that an amateur test (based on high-rate manual OOK CW skill) proclaims them to be champions in radio arts and techniques. That would be fine in the 1950s but not in the 2000s. :-)

>What's more. You speak of your Army Signal Corps days, and the
>training given to you there. Fine. However, with as sophisticated as
>today's radio equipment has gotten, do *you* really understand how it
>all works? The theory behind it? Consider a microprocessor controled
>radio; can you explain to me how the uproc works? Can you tell me the
>difference between a branch and a jump instruction? What is the
>fundamental function of a DSP?

Having been at the Fort Monmouth Signal School before Dick Carroll, I can say that the amount of learning of that day's radio technology was minimal and was all concerned with vacuum tube circuitry. "Computers" of that era were all analogue with the exception of the mighty mainframes that grew out of ENIAC's original form. The only "digital" circuitry that existed in the 1950s-1960s era was pulses for radar or microwave radio relay in the military...TV synchronization in the commercial side (other than some civilian microwave radio relay equipment not using FM or PM). The digital circuit techniques required at least meadium-scale IC technology.

The usual rationalization of too many long-timers is to discount all digital techniques as "not being 'real' radio." Since they haven't bothered to learn basic digital techniques they won't know how the embedded micro-controller has enabled PLL or DDS control of their LOs and VFOs along with displaying the proper frequency and a lot of miscellaneous control functions. There are too many boatanchor devotees who claim that "real radio" is analogue-only despite all the microcontrollers in their store-bought rigs.

<snip>

>My point is this: It's easy to sit back and say, ``these kids these
>days....they don't work hard.'' But, bear in mind that your father's
>generation probably said the same thing about your generation. And did
>you work hard? Quite possibly. We work hard too, just at different
>things.

In my case I spent a rewarding career in radio-electronics and had to continue learning all throughout that career. But, because of a lack of interest in morse code, myself and others have been denigrated by many long-timers as being "dumb" or "ignorant of 'real radio.'" That's not a good attitude on their part...but they don't want to learn more beyond tube technology so the attitude thus displayed turns off many.

Before Ed Hare jumps in here with soft-soap phrases of "most hams are good people" I would state that, in my experience, only about half the long-timers are good folks. The rest of the long-timers have easily-bruised egos who defend (to the death) their ignorance by adhering to old skills and techniques.

>It really gets under my skin when a guy who most likely doesn't
>understand the first thing about computer science tells me that I don't
>know anything technical...all because I'm taking an exam he doesn't
>consider ``hard enough.'' Give me a break; that test doesn't prove
>anything except that I met the FCC requirements to get a license. If
>you *really* want to know what I work on, send me an email, and I'll
>be glad to fill you in. I doubt you'll keep up, though.

I've given up on trying to help educate most long-timers. Most
want to argue minor points to make themselves look good, to
create the appearance of expertise when they aren't close.

An amateur radio written test is what the FCC thinks will
satisfy the FCC's requirements of regulating US civil radio.
Nothing more than that. However, far too many long-timers
think it is some kind of academic achievement of excellence
in radio. If that "academic achievement" isn't worshipped,
those attitude-hindered long-timers get all ego-bruised and
angry about imagined insults.

>Even these 1960's exams you're going on about probably didn't prove
>anything other than that I knew enough second semester physics to
>meet the FCC requirements and get a license.

Those 1960s exams have been way over-exaggerated in their
"complexity" and range of technological scope.

>I mean, if you're like this on the air, and you're representative of
>the type of people I'm likely to encounter, I'm not so sure I want to
>bother with ham radio; what's the point? To be insulted by someone
>who arbitrarily thinks he ``knows'' better than someone else?

The rationalization is that a newsgroup is "not real ham radio."
That's a convenient excuse to allow bad behavior and general
name-calling...but it will surface in-person when others don't
venerate their mighty achievements (based largely on tenure
than ability). It's basic psychology 101 stuff.

>Well, that's really all I have to say on the matter.

Can't say I blame you. :-)

>to be sure, you knew you were close.

The FCC must have "dumbed down" the fourth test between
my taking all four parts in March 1956 and "circa 1960."

Circa 1950s test format for the First Class Radiotelephone
consisted of a general-rules/regs first part, then successive
second through fourth parts. Passing second through fourth
parts corresponded to achieving 3rd, 2nd, 1st classes,
respectively. I passed all four parts the first try.

>Lots of really deep TV broadcast
>antenna stuff they didn't teach at Fort Monmouth..

Fort Monmouth Signal School wasn't teaching any
"broadcast antenna stuff" in the 1950s that I recall.
Lots of directional UHF and microwave antenna basics
considering that the Monmouth Signal School concerned
itself with radar and microwave radio relay. HF and MF
radio was taught at Camp Gordon, GA (now Fort Gordon).

Neither do I recall the FCC commercial 'Phone test as
having any "really deep" antenna stuff at all unless one
counts the acronym "ERP." The commercial test did
require some essay-type answers and drawing schematics
but all about vacuum tube circuits.

>But I got the Second
>and the Extra on the first try (Extra after the General and Advanced at
>the same sitting).

In that case the amateur extra test must have been lesser
in content than the fourth (first class) part of the commercial
test?

I don't see why some whiz-bang in radio couldn't have taken
all the parts and achieved a first radiotelephone on the first
try...

Arrest warrants are not issued for FCC rule violations, only for
criminal offenses and then rarely. The courts are very loath to
issue said warrants unless the goon has been warned several times
and disregarded all warnings. And even then they prefer that the
agency handle it administratively (monetary forfeitures and license
revocations) before they will get involved.

Phil, you may remember the incident, I don't remember the details (it happend some years ago). Satellites were receiving a signal on a distress frequency. This was traced to some electronics firm (apparently, the source was discovered in the evening). The guard contacted the night manager who basically told the df team to 'get lost'. Phone calls were placed - and the night manager told the commanding Air Force general to 'go pound salt'. Regardless of anything else, it is NOT a good idea to tell a commanding AF general you don't care diddly about his satellites. Guess who was waiting at the gate at 8:00 AM? FCC plus US marshals. Do not pass go. Do not collect $200.00. Both the general manager plus the night manager plus the company drew fines. Oh - and 1 year in jail (although that apparently was suspended). Generally, if you apologize and clean up your act, a first offense is unlikely to get you much other than a wrist slap. Telling the FCC (or a military command officer) to go pound salt is not a smart idea.

>Dick, I'm not an amateur, but I've been around radio and electronics
>a bit longer than you.

Oh, LEN! Don't underestimate yourself!

You are an amateur beyond your wildest imagination!

>For months you've been mumbling about the
>"sham" of modern testing but never once have I seen you make any
>sort of constructive criticism or suggestions for corrections.

He has. You just convieniently ignore them.

>I see
>little wrong with the test questions or the answers...but I see a lot
>wrong with the attitude that only the old ways are "correct."

It's NOT the "questions", Len. The are as timely as the process will
allow.

It's a system that makes it possible to become licensed without being
COMPETENT in the knowledge that is required.

>The FCC requires a test to fulfill its overall lawful task of regulating
>US civil radio. That test is not to satisfy some long-timers,
>individually or as a group.

The first statement is correct. The second one is stupid.

>Newcomers do not owe anything to
>the already-licensed.

Who said they did?

>The test is merely a government requirement
>to obtain legal permission to transmit RF at certain frequencies
>using certain modes.

More obvious pontification.

I see you didn't lose your edge, Len.

>OOK CW is not a required mode of RF modulation over and above
>all other modes.

Who said it was?

>Dick, I'm older than you and "bash" only those who want to set
>all regulations, class, status, etc. to their individual achievements.

You may be older than him, but you "bash" ANYONE who is NOT "you",
especially those with the Amateur Extra class license.

This is documented fact.

>When did you assume "authority" to regulate what all newcomers
>are "supposed" to think, feel, or believe?

Where did he say he did?

"Kim-W5TIT" asks:

> What does a CW test, at the time of application for a license, have to do
> with all the other topics that the written test(s) is supposed to be
> measuring?

It is not related to the other topics. It is supposed to measure
the applicants skill at receiving Morse code.

> The second part of the CW debate generally comes from those who rely on CW
> to be the "measurement" of a universal language. And I ask how?

>
> If there are two stations [using CW] who do not speak each other's language,

>
> If I don't know Russian and a Russian doesn't know English, how am I going
> to tell a Russian any more than that, and how can that be construed to be a
> conversation in a universal language.

I haven't seen anyone call it a "universal language", so I think this
line of questioning is a manufactured strawman. Nontheless, there are
de facto "conventions" in Morse (and other text modes, such as RTTY,
"TOR-du-jour", etc) which allow the transfer of information which would
be more difficult in voice modes. I don't know how to say "speak
slower"
in spoken Russian (and even if I did, my accent might make it
unintelligible)
but the unpronouncable opsig "QRS" is universally recognized.

With all kind wishes,

I used Code Quick to pass my Element 1 last week. I started using Code Quick just before New Year's and about 3 wks later I had my General!!

BUT. . .
I also used NuMorse, a Java Applet I got off Arrl.org, AA9PW's Java QSO generator, and one more QSO package that I forget at the moment. The key is to do the QSO's in as many different packages as possible to get a wider variety of styles. The Code Quick QSO generator is cheesy to say the least (you do 2 QSO's and you get complacent because the pattern is too easy).

When I took my technician exam, there was a 9 year old girl taking HER technician exam (and she passed!!). I inquired a little and found that her father had his license (I think General, but don't quote me) AND her mother was taking her Technician exam at the same time. My six year old daughter has shown an interest in "the radio", I plan on giving her as much exposure as possible to get her interested. We [the parents] are the ones who have to make things interesting for our children. You cannot compare Amateur Radio with Nintendo, Nintenco, INC has a whole department of market researchers whose entire job is to design products that kids will bug their parents to buy! Amateur Radio is a hobby, it is something we like to do (we don't do it for the money).

> conditions.

Nope, I don't buy it, Ed. You cannot separate the flow of current from the existance of an applied voltage in any circuit without totally changing both parameters. Ohm's law is a method of explaining their inteaction but it is merely a way of describing what is happening, and in no way controls that interaction.

> It is as valid to discuss voltage and current as it is to discuss
> power.
>

Yes indeed, you can discuss them and calculate their values individually (and I agreed your E field question was valid), but you can't separate 'em. When you do, you no longer have a valid circuit. Might as well turn off the power switch.

>
> I'll bet the first message in a real emergency would be "Can you go to
> voice?"

Nope. Given anything but extraordinary circumstances, voice will be the mode of choice and also the mode of use. However, twice during the last hurricane season conditions deteriorated such that the emergency nets did indeed change to CW and complete the need message transfer. Anyone who doesn't see the potential need for the use of CW as a valid communications tool ignores the fact that it is the most basic of radiocommunications modes. The higher up the technology scale, the more complex the overhead and more likely that *something* will occurr to cause failure, be it technical problems(and radio equipment is indeed becoming more reliable, but for software and computer platforms not necessarily), or more likely the mere lack of capability by at least some of the hams needing to handle an emergency communication. I know I don't carry my laptop, TNC and IC706 everwhere I travel. I'm more likely to have just the rig itself. I'm rather sure that many others don't either.

To repeat for the N'th time, I certainly don't advocate selecting CW for emergency use ahead of more efficient modes of any type. That would be folly. But as we all know when we pause to consider it, the availability of CW adds one more capability which many who never learned to use it clearly have no accurate way to evaluate. So most of them just say it never will be needed and gladly write it off.

And certainly there are a lot of potential situations where the ability of a modern digital mode won't be available for use by *one* of the parties needing to communicate. Using your own logic you need to be prepared to use a mode that is available for use by both the other station and yourself. Are you prepared, Cecil (how about all you NCI genuises?)

Using your own logic, you need to be prepared
> for such a condition. Are you prepared, Larry? (PACTOR II will

>

Pactor II won't get through at all if both stations needing to communicate don't have it available for use. If you can use it by all means do so. If not, you use what you can. When hams don't know how to use CW it is taken from us as a viable mode of radiocommunications. That is a travesty.

Such is NOT universally true. In Kansas, none of those (birth, death, or marriage) are considered public record. Divorce is public record only because of the action of a court. If no court were needed, divorces would be private too in that state.

In my state, California, only births and deaths are public record. Marriages can be, but the couple can pay a higher fee for it NOT to be.

I leave the other 48 states, plus the territories and the District of Columbia to the remainder of the newsgroup to fill in.

Far better than Robeson and with in-house advice on matters psychological (credentials available, along with long licensed practice, either one exceeding what any nurse needs).

It is easy to spot the control freak in newsgroups, especially those with longings to have their old rank back where they could berate others of "lesser" rank. There's no need to have "credentials" to spot them. Control freaks can dish it out but cannot take criticsm of any kind. Insecure ego problem.

Unfortunately, the out-of-context comment by Robeson is bound to begin a sub-thread which has nothing to do with amateur radio policy and everything to do with Robeson's perceived personal hurt at others "not following orders!" TS to everyone concerned. :-(

> Now your birthday makes you more competent on Amateur radio matters than
>those who ARE licensed Amateurs?

Robeson still has to publish his divine encylical defining "competency"...and then live up to such both on-air and off.

Robeson took my statement out of context (all the better to attempt insult of another) because of a lack of humor...and an obsessive need to insult certain others who hold differing opinions. That is consistency, not competency.

Tenure in amateur radio (to use "tenure" stretched) is not any "competency" in radio matters, policy, licensing, or much else. At best it is merely evidence of having survived long enough.

Those who are long-timers often lose touch with newcomers who desire to enter amateur radio. At best, most seem to want newcomers to go through the same procedures as they did...thereby holding themselves up as a goal to emulate. They are not such "goalies" since times change. The FCC will judge on what constitutes "competency" as to being granted a license. The "amateur community" is no more a judge of what the FCC wants than any other citizen who was in radio for some time.

Not at all. I am (still) a professional.

>>For months you've been mumbling about the
>>"sham" of modern testing but never once have I seen you make any
>>sort of constructive criticism or suggestions for corrections.
>
> He has. You just convieniently ignore them.

"He" has not. Carroll's desire is to turn back the clock to an earlier time when the FCC did license examinations. That cannot happen therefore it is not constructive criticsm.

Carroll calls the present US amateur license test a "sham."

No one can ignore such comments nor can anyone interpret such as constructive.

>>I see
>>little wrong with the test questions or the answers...but I see a lot
>>wrong with the attitude that only the old ways are "correct."
>
> It's NOT the "questions", Len. The are as timely as the process will
>allow.

I see little wrong with the test questions or answers. It would seem that the attitude of certain individuals is far from timely, courteous, or constructive.

> It's a system that makes it possible to become licensed without being
>COMPETENT in the knowledge that is required.

Robeson needs to publish his divine encyclical that defines "competency."

The FCC still passes (or rejects) the question pool content.
In what way is the FCC less "competent" in judging a license
examinee in comparison to Carroll's or Robeson's
"competency" when they took exams at FCC field offices?

>>The FCC requires a test to fulfill its overall lawful task of regulating
>>US civil radio. That test is not to satisfy some long-timers,
>>individually or as a group.
>
> The first statement is correct. The second one is stupid.

Tsk, tsk, reverting to name-calling again? It is quite apparent
that many that long-timers (Carroll and Robeson included) wish
(nay, demand) of newcomers that newcomers satisfy Them as
to "competency." This is especially true of Robeson's insistence
that no one can know anything about amateur radio until they
have passed the license examination and received their license.
Now that is as stupid a remark that any long-timer has made in
here...US amateur radio is open and aboveboard, well-
publicized, is forbidden to use encipherment, and can be
heard by anyone with a receiver within propagation distance.

>>Newcomers do not owe anything to
>>the already-licensed.
>
> Who said they did?

The implicit demand of certain long-timers (Carroll and
Robeson included) is that newcomers somehow "owe"
something (allegiance, worship, praise, etc.) to long-timers.
That comes across with every smart-ass remark and insult
generated by the two in this newsgroup.

>>The test is merely a government requirement
>>to obtain legal permission to transmit RF at certain frequencies
>>using certain modes.
>
> More obvious pontification.

It needs to be repeated for the benefit of those long-timers
who think that newcomers must bow down to the majesty
and glory of certain long-timers.

<snip>

>>Dick, I'm older than you and "bash" only those who want to set
>>all regulations, class, status, etc. to their individual achievements.
>
> You may be older than him, but you "bash" ANYONE who is NOT "you",
>especially those with the Amateur Extra class license.

I do not bash anyone who is civil and courteous, regardless
of license or class. Robeson has always been mistaken in
assuming his particular license imbues him with some kind

of shield to permit denigration and insult of those who take an opposite viewpoint to his. That shield does not exist.

> This is documented fact.

Yes it is. In post after post, Robeson has demonstrated his arrogance and insults in public messages for all to see.

Numerous Robeson postings ending with the Yiddish pejorative "putz" is evidence of this...plus other false and insulting statements having little to do with the subject but much to do with trying to put down those in opposition.

>>Why should CW survive?
>
> Why shouldn't it?

You cannot answer a question with another question.

Morse code has limited potential in communications beyond emergencies (such as at sea, giving position and immediacy of the emergency). One can exchange RSTs and WX and very limited communications of a personal nature using morse but anything else requires a lengthy (far longer than voice or data) session to exchange information.

The FCC does not declare OOK CW mode as a required one to be used by any amateur...yet international regulations require testing. That is inconsistent with the regulations.

This is the year 2001, not 1916. There is no Titanic 2 to be answered after it has hit an iceberg.

There is nothing wrong with OOK CW as a mode. There is everything wrong with a government body requiring a test in that singular communications skill in order to obtain a license when the agency does not specifically require its use.. Those who wish to use OOK CW and morse code can do so optionally without the requirement of testing.

Non-professional (amateur) radio is not a guild or union based on an apprentice-journeyman-master ranking. The requirement of a morse code test is little more than a hazing ritual to satisfy long-timers who had to learn it.

There is no need to "preserve" morse code skill for any national reason. Real emergency communications use non-CW modes. The US government, military included, does not use OOK CW or morse codings for regular communications (sensitive comm is done by enciphered data).

Wish I could agree. Actually, all it means is that the Government is
taking in more money than it's spending, period. That's not the same
thing. Especially when you consider future Social Security retirement
needs, and the fact that we have real problems that need solving.

But of course, my original question had to do with the fact that with
the economy slowing, the surplus was dwindling fast. Didn't make much
sense to go ahead and enact huge tax cuts, considering.

>What's wrong with this picture?

Actually, most economists I've read (well, most reputable ones,
anyway) are Keynesians, as well. I don't buy for a minute that Bush
is one, though. The main point was the tax cut. The sales job
changed to meet the situation: first it was needed because of the
booming economy (resulting in the surplus), then because the economy
was faltering. Neither were on solid ground, economically -- at least
in terms of implementation.

As far as Demos and taxes, I can only speak for myself. I would not
raise taxes at this time, but I most certainly would rescind those
scheduled for the future -- the ones that will overwhelmingly benefit
the ultra-wealthy, and do very little in the way of economic stimulus.

Finally, it should be noted that government spending also stimulates
the economy, per Keynesian economics. Talk of slashing spending to
make room for the tax cut is, therefore, a little inane.

> What's wrong with this picture?

OK, Cecil, I reread what you wrote (which I'm only now seeing, since
my newsreader seems to be slow as molassas on many messages). First,
Keynesian economics would predict that both government spending and
tax cuts provide economic stimuli (generally speaking -- it's possible
to screw them up, of course). The only aspect of that Bush seems to
be embracing is the "tax cut side": if you look at his budget
projections for the next several years, increased spending really
doesn't figure into the overall picture at all.

As I said before, I think Bush's advocation of tax cuts as an economic
stimulus is largely bogus. I think he's for smaller government
heedless of consequences, period. The tax cuts are simply a means to
an end.

Both parties have swapped sides on different issues on occasion.
Economics is one; racism and civil rights another. Long-term
consistency would seem to have taken a back seat to getting elected.
Not necessarily a bad thing in a representative system, IMHO, but
interesting nonetheless.

Regards,
Jonathan

If someone is serious about emergency communications, he will adopt
the best one. If he doesn't, that's his mistake and people sometimes
pay dearly for their mistakes. Are you going to insist on CW when
you are in trouble and the only signal you hear is PACTOR II?

> Pactor II won't get through at all if both stations needing to
> communicate don't have it available for use.

That's true for *ANY* mode. Why not choose the best one? I really
feel sorry for anyone who bets his life on a single mode when other
superior emergency modes are available.

> EASY PHIL! We were just fantasizing! A man can have his dreams, can't
>he...?!?!!

I got a dose of instant reality about a week on the job. Just like
when I was at the Sheriff's Academy and we got to the part about
shooting at fleeing suspects...

My wife was excused on a jury selection once in Federal court when
the judge asked her, after she indicated that her husband worked for
a Federal law enforcement agency, whether she had any prejudices for
or against the Feds (this was a case involving the Postal Inspectors)
and she replied "no, I'm not prejudiced at all, but my husband says
that all the other agencies seem to get warrants a lot easier than
his does..." Ka-Boom...both the prosecution and the defense were on
their feet... <ggg>

If it involves the Top Three as we used to call them (White House
Communications, other military and Federal communications, and
civiliab public safety communications) the US Attorney and the
courts can act pretty quickly. And it doesn't even have to involve
an intentional violation. We once had to get a warrant and the
Marshals to be able to pass through an uninvolved locked property to
DF and silence a distress beacon that had been stored on an adjacent
property.

Dissing the FCC is not smart, as at least one radio station owner
and manager found out "on my watch" because when we started peeling
the layers back we found that the licensee had abandoned any sense
of control of the station and was using it to launder some other
version of dirty clothing..... <ggg>

They don't have to be given, Jim, they only have to be taken. They probably
exist somewhere. All we have to do is find them.

CW is a valid communications tool if and only if there is someone there
who understands it. Are you willing to stake your life and the life of
your loved ones on the chance that someone will understand CW?

What is more fair than giving the money back to the individuals who
paid it in the first place? When you refund the purchase price
of tickets for a rained-out ball game, do you give $25 back to the
people who bought the $10 tickets and $10 back to the the people
who bought the $25 tickets? That argument is absolutely ridiculous.

Not at all, Dwight.

Part of the play on words was to entertain wordsmith Cecil. But the main reason was to point out that making comparisons between the current tests and those of decades ago is speculation at best and absurdity at worst. Since the pre-1983 tests are not available, who can say for sure how "hard" or "easy" they were?

>Make those tests available again, and I'm fairly sure
>most hams today could pass them.

You're fairly sure that most hams today could pass the 20 wpm sending and receiving CW tests that I took?

> Many thousands of northerners come south for vacation during the
>winter each year (we even have a name for them - "snowbirds"). How
>many southerners go north to vacation (to ski, hunt, fish, camp, or
>whatever)?
>
Some do, but not many. The reasons are simple: weather, population density,
developmental level and economics.

> You can claim what you want, but the facts speak for themselves.

Which facts? You seem to see north and south as monolithic blocks rather than
diverse mixes of things. Is Florida identical to Texas? Is Arkansas the same
as Virginia or Georgia?

>Southerners don't go north (to live, to vacation, or for any other
>reason) because they know they're not welcomed.

I know plenty who have come here. They are welcomed.

I think many stay away because of other factors. The winters here are harsh and long, and further north they are even harsher and longer. The cost of living in many parts of the Northeast (that's the area I'm most familiar with) is much higher than other parts of the country, so a higher pay scale does not translate into a better standard of living.

Real estate prices, taxes, energy costs, and insurance are just some examples.

>Even the ones who have
>never been have heard from those who have.
>
Have any of them moved to the Philadelphia area?

Ahhh - sorry, I misunderstood.

I would argue, though, that in the past the tests for higher class ham licenses
required more knowledge of the then-current "state of the art" than today's do.
Did you see the post where I described a typical pre-WW2 essay question? (I
think it was in the thread about multiple choice questions).

As I said, the abbreviations do a lot, but that's true of any text-based mode.
The Q signals and standard abbreviations permit some communication.

Besides recognition from the sending, there is also recognition from signal characteristics. And unlike visual modes, CW is usally sent manually and received aurally in real time, with the operator listening to the demodulated signal.

It's similar to the difference between listening to someone talk and reading a transcript of what they said.

You left out one very essential component. There must be someone out
there capable of receiving the CW signal. Are you willing to stake
your life on that component?

>be.

As you know, I am a California attorney so I know something about
this area.

I have never had problems going into the applicable county clerk or
recorder office to look up or get copies of divorce decrees (except
for sealed financial and medical information) or marriage certificates
(there may be blocked info on the latter but the balance is public
record). The per-page copying charges are steep, though, and there
is no central state-wide index (yet) so you have to go county to
county until you find it. Investigators (public and private) do
that routinely.

My "home" county (San Mateo) was considering computerizing the info
and making it available on web lookups for a fee when I served on
the County Bar Association's Technology Committee three years ago.
Probate and Property Records were ahead of it in line, though.

Particularly when the tax cut is over ten years, virtually guaranteeing a five-year recession as the stock market is only now beginning to figure out. With the cuts in place, capital is firmly mired in place; why move on when taxes are coming down?

Jonathan, you are about to get a lesson in why your Granddaddy was a Democrat.

Doesn't matter.

In order to pass the tests I took, a person has to take them.

Can you (or Kim, or Larry, or Dwight) take the tests I took in 1967, 1968 and 1970? Nope.

Therefore, none of you can pass them. Simple.

>They probably
>exist somewhere.

Prove it. FCC may have destroyed all that old stuff.

> All we have to do is find them.
>--
Until that happens, and you find somebody to give them, what I wrote is true: You can't pass the tests I took. Remember, those tests were secret, so if a potential test-taker has advance knowledge of the test contents, it's cheating.

Government can not spend money unless it first takes it from the people in the form of either taxes or deficit spending (which must be repaid at some future point, with interest). Remember, government has no money that is truly its own because government can not create wealth, unlike businesses. Even the printing of money is not truly creation of wealth because it simply devalues money already in circulation and adds nothing at all to the actual wealth of a country.

Please explain how taking money from the people makes them better off.

>> a circuit -- each exist as separate entities and be changed by circuit
>> conditions.

> Nope, I don't buy it, Ed. You cannot separate the flow of current from
>the existance of an applied voltage in any circuit without totally
>changing both parameters.

Sure I can. If I change the value of the current by changing the value of the resistor, the voltage stays the same. Happens all the time in circuits and in the radiated fields from antennas, if you change the "circuit" parameters.

Nonetheless, it is quite valid to talk about the voltage in a circuit, or the current in a circuit -- do you always refer to only power? Of course not. Why do you appear to feel that it is not equally valid to refer to and to use the electric fields or the magnetic fields from radiating elements?

> Ohm's law is a method of explaining their interaction but it is merely a way
of
> describing what is happening, and in no way controls that interaction.

Correct. The equivalent, as asked in my original question, was based on the same principles as Ohm's law.

>> It is as valid to discuss voltage and current as it is to discuss
>> power.

> Yes indeed, you can discuss them and calculate their values
>individually (and I agreed your E field question was valid), but you
>can't separate 'em. When you do, you no longer have a valid circuit.
>Might as well turn off the power switch.

An open circuit is a valid circuit, Dick. And you can indeed separate the E and H fields. A short dipole responds to the E field and not the H field. A small loop responds to the H field and not the E field. And, more often than not, it is necessary to refer to one or the other, but not both.

I definately want newcomers to go through the same procedures I did -- take a reasonable test and get on the air and have fun. I want them to be able to make the same mistakes I did, without some critical old time ham criticizing their every move and taking all the fun out of it. I was not BORN knowing that there is a difference between field strength and powe density; I even made that mistake a few short years ago.

I guess I was lucky; I ran into old time hams that didn't fill some inner need by ripping me apart for every false step in my lifetime of learning. If they had, I don't think the fragile 13-year old kid I was would have stuck around.

Do you make your own extension cords? Only three components, wire,
male plug and female plug.

Cheers,
Bill K2UNK

You *always* ignore life's realities in order to preserve your
"technolgy forever, all the time and any cost" agenda. Who says you get
to choose the mode to use? If you hear someone using CW to send an SOS,
you will just write himn off because he isn't using PACTOR, with no
regard whatever for the circumstances. We see.

There you go again, lying again - *by your own definition*.
You know all to well that I have *never*, ever insisted on relying on CW
as anything other than a last resort mode. That means when everything
else is gone or unavailable, those who know CW will still have a
communications capability. Everyone else will be out of luck. As will
also be everyone who depends on them for communciations.

Bill you can easily check the arcives of this NG to get the original data and read it for yourself. One case was in Georgia, Savanna to Atlanta, the other in Texas, from a coastal area to the state capitol. One was posted by Arnie Macy, KD4ST the other came from N5LF, Alan Wormser.
What this shows is not that CW is the best nor most desirable mode at all, rather that just about every HF station is equipped from the factory for CW o[eration while the hardward overhead to use PACTOR or other digital modes is just not in place.

Dick

If Cw is the only mode available for use, on either side of the radio
circuit, you know who sets the stakes. But of course it goes against
your Agenda to admit it.

So you would rather hams preclude themselves of even the possibility of
being able to use the most basic radiocommunications mode, the mode of
last resort,
by denying them the communications asset of being instructed in the mode
during their licensing, just to advance your digital agenda.
We know who is the dunce and it isn't the ham who believes a CW
capability is worth keeping.

> digital modes, too. There is no list unique to CW.

Come on Ed, you surely know better. For most of the past century CW ops of every nationality have communicated, often without knowledge of each other's language. There exists far more than the Q signals and the few prosigns used today by hams. The fact that you, a CW ham, don't know of them seems to go far toward confirming the fiction that CW can't be used to communicate a lot of information between non-common language CW oeprators. Of course, these can also be used on any text based mode, and indeed SHOULD be, as I and many other CW supporters have so often said, when those more efficient modes are available. If they were, one probably wouldn't be using CW in an emgergency situation, would he?

Some other assets useful for abbreviating text and multilanguage use:

Z signals

ARL numbered radiograms

There is a fairly long list of Q signals that few new hams know about, they usually learn a half dozen or so.

There is another long list of "official" obreviations that are (were) universally recognized by CW operators the world over. Additionally, English
has long been recognized as the most universal language for international radio communications, and many opertors in other nations quickly learned enough English to use it routinely for radiocommunications. Sorry if many American hams don't know that.

All this is nothing new, it has been in worldwide use for most of the last
century by those who made their living working CW as traffic handlers. Mostly maritime, fixed stationmilitary and police CW operators. Tghe fact that all of this is foreign to so many hams goes far to show that hams by and large don't care much about traffic handling or emergency operations.

And when you do, everything else about the antenna's radiated field
changes dramatically. If not, why bother to match an antenna?

Here in San Diego, several of us including VE's have discussed the matter extensively.
Here are how folks learn the code, depending on how they perceive things -- audible, visual, association, etc. FROM THE BOOK DX101X at URL: http://ac6v.com/DXSAMPLE.htm

There is no one way to learn the code that will work for everyone. Beware of the ham who says ï¿½here is a sure fire way to learn the codeï¿½. Here are several methods ï¿½ choose the one that works best for you.

VISUAL -- some learn best by seeing it on a computer screen as they hear it.

AUDIBLE - Musically or language associated- some learn it as a song or word -- dah dah ditit -- The zebra did it. dah dah di dah -- here comes the bride - queen. Code Quick does this with mnemonics.

AUDIBLE - INVERSE - Some study the opposites A then N, K then R, etc.

AUDIBLE PHONETICS - Some learn by associating it with the NATO Alphabet i.e, dit-dah followed by A or ALPHA after a while you will hear dit dah and A or alpha pops into the brain.

PATTERNS -There are patterns in morse code letters. For example: the letter A is similar to the letter W except that the letter W has an additional dah to it. One might study A, W, J, 1 in order, then mixed. This is effective if one has difficulty in discerning J from 1 etc.

TYPING - some find that they have an automatic reflex to hearing a character and hitting the right key on a keyboard. Check with your VEC if they will allow you to take the test this way. One of our local examiners does allow this as well as a Braille keyboard for the blind.

SENDING ï¿½ Some folks learn better or improve by sending with a key. Others read signs while driving on the highway. This is usually in conjunction with a listening method.

CHARACTERS - at 5 WPM it is feasible to repeat (or count) the dits and dahs in your head and pass the test --- this is the hard way and Farnsworth makes this tough ï¿½ not recommended but may be the only way for some.

PLAIN TEXT VS MIXED RANDOM CHARACTERS. Studying Morse in plain text gives the advantage of being able to anticipate what is coming next where mixed random characters ï¿½ ya gotta know them all. Maybe practice both if that works for you.

KOCH METHOD - Learn morse code using high speed random characters.

FARNSWORTH - All tests are soon to be given at 12 WPM character speed, 5 WPM overall speed ï¿½ if you are tested in Farnsworth -- then study that way -- several who have studied straight 5 WPM - couldn't copy a darn thing in Farnsworth.

BRAIN SOAK ï¿½ Some folks give up on methods and just pain listen to code practice until one day it just all comes together. The impediment to increasing speed and proficiency is called a barrier which you may feel you will never hurdle, but is amazing when one day after brain soaking ï¿½ it magically all comes together. Your mileage may vary.

COMPUTER PROGRAMS AND COURSES - There are many available -- see Morse Programs at URL: http://ac6v.com/morseprograms.htm
and try them out -- choose the one that works the best for you. Remember that the one that works for your buddy or elmer may or may not be the best for you.

Really, Ed. What amateur frequencies (primary of course) can someone transmit legally without a license. Was this guy in an emergency situation? Seems to me, he was some military clerk typist sending telexes to the states.

And then why even bring it up? What does it matter what HF he transmitted on, outside of amateur frequencies? Isn't he the one that repeatedly states any comment outside the ARS box is not germane? That being the case what the hell does his military service (from the 50's I believe) have a rats ass to do with amateur radio? NOTHING. What the hell does his great employment record have to do with the ARS? NOTHING

Just another in a series of resumes out to impress himself. Maybe the next 6 week vacation could be permanent..... just kidding..see a smiley ;-)

>of tickets for a rained-out ball game, do you give $25 back to the
>people who bought the $10 tickets and $10 back to the the people
>who bought the $25 tickets? That argument is absolutely ridiculous.

This argument goes to the heart of the reasons for progressive
taxation. There are two good reasons for higher taxes on the wealthy,
Cecil. The first is fairness: the top 1% wealthiest individuals
control over 38% of the wealth in this country, and receive on the
order of 13% of the income. They pay, by contrast, about 20% of all
federal taxes, yet are receiving over 40% of the tax cut (CBPP).

The second is one of practicality: progressive taxation is one of the
ways we keep wealth from overwhelmingly concentrating in the hands of
just a few people. If we believe in fair rewards for work, it's kind
of tough to justify reducing taxes on the wealthy in the face of
ever-increasing income inequality.

By any measure, income inequality has increased drastically in this
country over the last 20-25 years. It doesn't make a whole lot of
sense, therefore, to be scaling back one of the dampers on that
process.

You know, I really didn't come here to argue politics :^) Do things
digress here often? I noticed a thread on the Emancipation
Proclamation recently, too.

Well, where an egress occures .... just fire up as much power as you can muster right on that frequency (assuming it is in an amateur band). Usually the system will also be susceptable to interference on that frequency. Digital modes would probably be best although SSB would be worth a try (depending upon where in the band the interference is occuring). Hey, 1.5 KW of CW at 40 or 50 WPM might work wonders too!.

Enjoy!

The correct answer is "2 amperes or less" because the internal
resistance of the battery is not specified, and all batteries have
some internal resistance.

I disagree with this theory.
>
> Why should CW survive?

Here are some reasons:

1) It's a lot of fun, once the basic skills are learned
2) It "gets through" better than ANY analog voice mode, and better
than many data modes
3) It permits the use of very simple equipment, very advanced
equipment or almost anything in between
4) It helps bridge language barriers (such as accents)
5) It is useful for many people with disabilities (like blindness)
6) It is useful in situations where many other modes are impractical
7) It is a challenge to the skill of the operators using it
8) It is uniquely well suited to many amateur radio activities, such
as DXing and contesting
9) It is a unique form of human communication, different from both the
spoken and written word.
10) It is well suited for human-machine interface

CW will survive and continue to flourish in amateur radio as long as
hams continue to use it and promote it on its merits.

->some internal resistance.

No, I think the correct answer is "All of it" since no other external load was
specified.

I wonder how they explain the fact that you can see it is round when you look at it from a dozen or so miles up?

n2ey@aol.com (N2EY)
shared these priceless pearls of wisdom:

->> Why should CW survive?
->
->Here are some reasons:
->
->1) It's a lot of fun, once the basic skills are learned
->2) It "gets through" better than ANY analog voice mode, and better
->than many data modes
->3) It permits the use of very simple equipment, very advanced
->equipment or almost anything in between
->4) It helps bridge language barriers (such as accents)
->5) It is useful for many people with disabilities (like blindness)
->6) It is useful in situations where many other modes are impractical
->7) It is a challenge to the skill of the operators using it
->8) It is uniquely well suited to many amateur radio activities, such
->as DXing and contesting
->9) It is a unique form of human communication, different from both the
->spoken and written word.
->10) It is well suited for human-machine interface
->
->CW will survive and continue to flourish in amateur radio as long as
->hams continue to use it and promote it on its merits.

Then the question becomes, "Why should you be tested on horsemanship when you go to get a driver's license?"

1. It's a lot of fun, once the basic skills are learned.
2. It "gets through" when automobiles are bogged down in the mud, and better than a lot of four-wheel drives.
3. It permits the use of rope bridles, silver saddles, or almost anything in between.
4. It helps bridge language barriers such as reading a speedometer or worrying about traffic signs.
5. It is useful for many people with disabilities (like blindness).
6. It is useful in many situations where other modes are impractical.
7. It is a challenge to the skill of the riders using it.
8. It is uniquely well suited to many transportation activities, such as barrel roping and bulldogging.
9. It is a unique form of human transportation, different from both buses and trains.
10. It is well suited for human-horse interface.

We will continue to test on horsemanship as long as drivers continue to use it and promote it on its merits.

>Really, Ed. What amateur frequencies (primary of course) can someone
>transmit legally without a license.

"lamwhatlam:"

It's quite a spectrum full of frequencies. See Part 15 of Title 47.
Not a great deal of output power allowed, though. :-)

>Was this guy in an emergency
>situation?

No. Irrelevant statement.

>Seems to me, he was some military clerk typist sending
>telexes to the states.

Quite incorrect. "This guy" was an E-5 in the US Army with
a primary MOS of 381.6 (the "point six" denoted supervisor),
operating and maintaining 36 to 42 transmitters on HF, each
of which had 1 KW or more output..

>And then why even bring it up? What does it matter what HF he
>transmitted on, outside of amateur frequencies?

Why does an anonymous troll "bring it up?"

Who are you, troll? Some insecure CB weenie? :-)

>Isn't he the one that
>repeatedly states any comment outside the ARS box is not germane?

Radio is radio, anonymous one. The physics is the same whether
designated amateur, commercial, or military.

>That
>being the case what the hell does his military service (from the 50's I
>believe) have a rats ass to do with amateur radio?

The US military of over 48 years ago did NOT use CW for fixed-
station to fixed-station "traffic handling" on HF. That point keeps
getting made to all the CW "radio experts" falsely boosting OOK
CW as some kind of primary "traffic handling" mode a half
century ago.

>... What the
>hell does his great employment record have to do with the ARS? NOTHING

Quite true, but, on the reverse side of this trollish coin
from an anonymous weenie, it should establish some
cognizance of radio communications over the last half
century. The anonymous one hasn't stated his/hers/its
"qualifications" OR call-sign.

>Just another in a series of resumes out to impress himself.

Not at all. Most amateurs (in here) seem pissed off that
there exist professionals in radio. That's an ego problem
and most noted in the postings of those that use anonymous
handles. In the case of "lamwhatlam" there is NO "resume,"
qualification, or call-sign. Nothing.

>Maybe the
>next 6 week vacation could be permanent.....

Sociopathic response. Tsk, tsk.

Anonymous sociopaths seem to wish others gone (or dead).
Insecurity syndrome. Can't handle arguments. Poor baby.

writes:

<snip>

> All this is nothing new, it has been in worldwide use for most of the
>last
>century by those who made their living working CW as traffic handlers.
>Mostly maritime, fixed stationmilitary and police CW operators.

Oh, oh, a mistake there... :-)

Fixed station US military modes have been TTY, voice, and
facsimile since over 48 years ago.

"Police CW operators" seem to have been concentrated in
Missouri since the police departments of Illinois, Wisconsin,
Washington (state), and California have used TTY for "traffic
handling." [we've been over that over a year ago, Dick, give
it up]

>Tghe
>fact that all of this is foreign to so many hams goes far to show that
>hams by and large don't care much about traffic handling or emergency
>operations.

"Tghe fact" is that Dick doesn't understand that today's
emergency communications uses voice, data, and video.
GMDSS uses automatic data for maritime emergencies.
"Real" emergency communicators no longer use morse.

Amateur radio is not established to be a primary emergency
communications service. It can function so, but it is not the
primary purpose of amateur (non-professional) radio. Let's be
realistic in arguments instead of building weak plaster
pedestals to climb for the sake of self-glorification.

That's a nice rationalization for those who prefer morse.

That's also a good way to foist personal preferences on
hazing rituals for newcomers.

There is no reason to "preserve" morse code skill for any
national need.

>
>>Why should CW survive?
>
>For the same reasons that any operating mode should survive in the Amateur
>Radio Service, Len.
>
>Why would you ask such a question?

...because some (such as Carroll) equate FCC testing with use
of CW). There is no separate manual-mode test element in the
FCC regulations for any of the other modes. Further, the FCC
regulations do not require amateurs to use OOK CW over and
above any other mode. It doesn't make sense that testing for
morse code ability be retained in license testing.

To maintain that OOK CW "must survive" on the basis of it
being used in amateur radio today is specious, illogical. If the
"in-use" reason is somehow valid, then spark transmitters
"should" have remained legal by the same logic. It didn't,
regardless of the technical deficiency of AM-FM-PM wideband
spark. :-)

The "reasons" given for the maintenance of OOK CW as a
mode (under any circumstances) seems to be rooted in the
proponents of OOK CW having been tested for it and having
obtained personal satisfaction from using it. Problem is that
FCC regulations are not based on the personal satisfaction
of individuals but rather on regulation of the entirety of civil
US radio for its citizens as a whole.

Let's face it, OOK CW is a dinosaur of sorts. The dinosaurs
went extinct. So can OOK CW. However, some folks are
very interested in dinosaurs today... :-)

>every move and taking all the fun out of it.

It seems to me that long-timer criticsm is growing more strident. :-)

Remember, the critical old time hams get their fun out of being
critical. They already have theirs and feel superior. In-person
you can see their eyes glow and their muscles tense as they
perpare to bait the newcomers. :-)

>I was not BORN knowing that there
>is a difference between field strength and powe density; I even made that
>mistake a few short years ago.

That's true for nearly everyone (exceptions exist among some
long-timers in here). :-)

The physics of electronics (which includes the subset of radio)
can be fascinating and learning can, in the long run, be fun just
for the sake of learning something new. For an individual.

What seems to spoil it for newcomers is the pompous long-timer
who insists that newcomers "learn" Their way in order to be as
good as they imply they are. They have a fixed set of standards
as to what constitutes "good radio" and no one can tell them
anything new. God forbid anyone corrects their errors! :-)

>I guess I was lucky; I ran into old time hams that didn't fill some inner
>need by ripping me apart for every false step in my lifetime of learning.

Consider yourself lucky.

In my case I had neither help nor hindrance by pompous long-timers
in my teen years. The help and hindrance stuff was spotted on

reaching adulthood. :-)
.
The physics of electronics seemed fascinating enough by itself to
try to find out how it all worked. I'm still learning as are most of my
contemporaries. The odd part is that some still cling to the notion
that no change took place after they (the pompous long-timers)
got their amateur licenses.

>If they
>had, I don't think the fragile 13-year old kid I was would have stuck around.

I rather think you would have.

What happens today is that there are a great deal of interesting
hobbies and activities available to teens and young adults. Many,
many more than teens of yesterday (I was 13 in 1945 and even
then radio was an accepted technology).

Today's pompous long-timer seems to insist that all teens or
young adults must view radio with the same intense interest
they claim to have had...or be considered somehow defective.
There is no "defect" there, just an ego trip of setting the role
model of excellence on their own experiences. Since the ego-
driven strive also for control, position, and status, they can be
seen as those insistent types who maintain that testing,
standards, and procedures remain unchanged.

Some of the pompous (and arrogant) long-timers have adopted
amateur radio as an entire lifestyle, rather like the fraternal
order members whose life revolves around the lodge hall. Not
exactly anything wrong with that if the fraternal order activities
are in moderation to the rest of life...but it can lead to a sort of
"closed order" society subset that is blind or bigoted to the
rest of radio and electronics. If you aren't "in" the closed order
you know nothing at all and that sort of thing...foolish notion
considering that US amateur radio is one of the most open of
such groupings, open to any of the public who care to be
interested.

Then why bring them up?

If it is so necessary to bring up old tests, why not go back to
the original 1912 tests for amateurs? :-)

You wouldn't since, like most long-timers of pre-restructuring,
your tests were "obviously" so much harder than today's tests.

>>Make those tests available again, and I'm fairly sure
>>most hams today could pass them.
>
>You're fairly sure that most hams today could pass the 20 wpm sending and
>receiving CW tests that I took?

See? There you go, emphasizing what YOU took. :-)

The FCC no longer requires 20 WPM morse testing of US
radio amateurs...for any class.

The Civil War resulted from having a greater motivation to have a war
than not to have one. Without slavery as the driving issue, there would
have been far less motivation to have a war than to have one.

> >reason) because they know they're not welcomed.

> I know plenty who have come here. They are welcomed.

It's the same perception anyone would have of people in an area where
they are a stranger. I remember getting off a plane in Atlanta back in
the 70's - before long hair was "stylish" in the South. People looked
at me like I had gotten off at the wrong airport.

The question I have never seen addressed to any satisfactory degree is the issue of CW proficiency. One a Ham has passed whatever CW test you deem necessary how do you, or how can you, guarantee the Ham still has sufficient proficiency at CW that he would be competent in using it for emergency communications, at a later date? Without forced practice, and mandatory retesting on a periodic interval I can't see it. I'll bet you right now there are Hams out there who only passed the CW test just so they could upgrade, and then never bothered to keep their CW proficiency up with regular use. I'll even bet some would have trouble sending their call sign in CW.

So after all is said and done nobody knows if a given CW tested Ham is able to use CW during an emergency. In my mind that leave a huge question why bother with a mandatory CW test at, all since nobody knows if a CW tested Ham will still be able to use it years after the test is done and forgotten. I think this blows a hole in the whole argument that a Ham needs to know CW for emergency communications, true, but only if the Ham(s) in question still know how to use it. A once in a life time CW test in my mind just doesn't do it.

So if CW is SO necessary then push the ARRL and the FCC for mandatory CW retesting at frequent intervals, so that every CW tested Ham can be counted do their duty during an emergency situation where CW is needed. Good luck.

>It seems to me that long-timer criticsm is growing more strident.

>Remember, the critical old time hams get their fun out of being
>critical.

They can afford to be. They have "been there/done that".

So far you haven't even "been there", but you are still critical.

>They already have theirs and feel superior.

I am sure you think so. Not being licensed nor participating in any
Amateur programs you have NO practical experience upon which to base this.

Unless, of course, you refer to the "friends" you frequently cite as also
being licensed Hams.

That would explain a lot of why you are in here. I imagine they are as
closed minded and foolish as you.

>In-person
>you can see their eyes glow and their muscles tense as they
>perpare to bait the newcomers.

I was right.

>What seems to spoil it for newcomers is the pompous long-timer
>who insists that newcomers "learn" Their way in order to be as
>good as they imply they are.

Yeah...learning is SO over-rated. Especially for someone who took
fourteen years to get a two-year degree, huh Lennie?

>God forbid anyone corrects their errors!

You mean like YOU do...?!?!

>>I guess I was lucky; I ran into old time hams that didn't fill some inner
>>need by ripping me apart for every false step in my lifetime of learning.
>
>Consider yourself lucky.

Why...?!?! That he fell among "average" Hams that would offer to
help...?!?!

Of course, this is AGAIN another example of YOUR glaring lack of practical experience in the Amateur Radio Community.

>In my case I had neither help nor hindrance by pompous long-timers
>in my teen years. The help and hindrance stuff was spotted on
>reaching adulthood.

When you REACH adulthood, tell us about it. Until then...go back into hibernation, OK?

>I'm still learning as are most of my
>contemporaries.

Most of your "contemptoraries" (yes, I spelled it right) aren't the insolent jerk you are...Thankfully.

>Today's pompous long-timer seems to insist that all teens or
>young adults must view radio with the same intense interest
>they claim to have had...or be considered somehow defective.

Who...?!?! Quotes, please...?!?!\

>Since the ego-
>driven strive also for control, position, and status, they can be
>seen as those insistent types who maintain that testing,
>standards, and procedures remain unchanged.

Kinda like the "ego-driven" types, such as yourself, who are too good to sit for the exam because you think YOU know too much already...?!?!

>Some of the pompous (and arrogant) long-timers have adopted
>amateur radio as an entire lifestyle, rather like the fraternal
>order members whose life revolves around the lodge hall

Here we go again with the "lodge hall" mentality rant. We can just substitute "Amateur Radio Operator" with "retired electronics technician" and it would apply equally well to Lennie.

In as much as Lennie demonstates difficulty making accurate assesments of images in the mirror, one wonders how he shaves safely.

(SNIP).>...but it can lead to a sort of
>"closed order" society subset that is blind or bigoted to the

> conditions.

Very strictly speaking, Dick is right. The only time E and H fields
can be completely independent of each other is in the static case where
dE/dt and dH/dt both are zero. Maxwell sez that for every dE/dt and dH/dt
in three-space there is a resulting curl H and curl E (respectively).

However, Ed's point about the circuit-theory approximations allowing
voltage and current (and by inference, E and H) to be considered
independently is well-taken. Electrically small antennas can be made
to discriminate strongly in favor either E or H field with the other
inferred by Ohm's law from free-space Zo.

I was thinking about just this subject back in 1971 while I was "walking
out the radials" on a country-and-western, seven-tower, DA-2 in Ft. Worth,
Texas with Willy and Waylon clanking away in the earphones plugged into
the field strength meter. That field strength meter, by the way, had a
shielded loop antenna built into its lid, ensuring it only responded to
the received H field, but was calibrated in volts/meter - the units used
to measure E field. As far as observing that the Q and A was right, that
field strength did vary inversely with distance, yeah, I confirmed that
close-in. But as I headed out West towards Wichita Falls and the dry
Cap Rock, I found the field strength decreasing with the square, cube...
tenth power of distance as the soil conductivity went to zilch. It is
truly amazing how having to repeat a set of field strength measurements
in 100-degree, Texas weather clarifies one's mind concerning the
characteristics of electromagnetic waves.

Well... the post was mostly in a joking matter but of course text does not
reflect inflections etc. I understand there is a "few" things that may not
be able to change such as the electronic ones as mentioned before. Maybe
my kids will have to adjust to the metric system, but I refuse to. I will
never refer to the length and weights equivalents in metric at least.

WA8ULX, this is one of the few things I am sure we will ever agree on, but here in Michigan I can report the same situation. About the only time there is much traffic is on times of Public Service Nets and the morning/afternoon drivetimes. About the only regularly used repeater system in Michigan is the W8HVG Link System (www.w8hvg.org).

We are going to have to put out another "Beware of Lennie" FAQ, especially about letting him get his toe in the door on his >>1950's<< radio experiences in the Armed Forces.

>Who are you, troll? Some insecure CB weenie?

>Radio is radio, anonymous one. The physics is the same whether
>designated amateur, commercial, or military.

The physics are the same. That's NOT what we discuss here, Oh LICENSELESS One. It's the APPLICATIONS.

Of course, with no authorization, (including your "expired" GROL), it's all moot for you, huh...?!?!

>The US military of over 48 years ago did NOT use CW for fixed-
>station to fixed-station "traffic handling" on HF.

Sure they did. Not to the degree that they had even a few years earlier, but it was still in use.

>The anonymous one hasn't stated his/hers/its
>"qualifications" OR call-sign

And YOUR Amateur qualifications and/or callsign is...?!?!?!

>Not at all. Most amateurs (in here) seem pissed off that
>there exist professionals in radio.

Not at all...we depend on them.. We are just "po'ed" over ALLEGED professionals (such as yourself, for example) who feel compelled to force thier own standards on "us" all the while belittling us for how we "do business".

> Can't handle arguments. Poor baby.

I think it's more a "creep tolerence" problem, actually. Anonymous as he is, he seems to have hit right on the money with you. (As if it would take any amount of effort...!!!)

>Leonard H. Anderson

Yeah...SURE you are.

>>anything other than CW skill?
>
>Nope. It measures other things, too.

Such as? Now before answering, recognize that a code
test of random alpha/numeric and punctuation for 5 minutes
with one minute of perfect copy would constitute a pass
for the CW test if given in that manner. The traditional
testing usually uses a text message from which questions
are asked of the applicant. That understanding is incidental to
the actual CW test requirement.

>The debate is really about whether those
>other things need to be measured by a pass-fail test that is required for an
>HF/MF ham license.

Again, what other things?

>>I think like you, that the only reason the CW
>>mode test was ever there was to comply with international treaty agreements,
>>and to "follow along" with the concept of having trained operators who could
>>meet the same standards as those they may encounter from a government
>>entity, such as the Coast Guard.
>

>Those are two reasons, but there are others.
>
>> CW is no longer emphasized, so the
>>government no longer requires radio operators with advanced license
>>privileges to have such a focus.
>>
>No longer emphasized or widely used by other services, yes, but it's all over
>the place in ham radio.

And it is now, and has been for over 50 years, a strictly OPTIONAL
mode of choice. Use by others hasn't mandated anyone to
learn and/or use it. The ONLY mandated aspect of CW has
been as a license requirement. There was a time when the
FCC license renewal form asked the ham to state that he/she had
maintained the code skill requirement, but that hasn't been the
case for well over 20 or more years.

Cheers,
Bill K2UNK

A surplus means the government is taking in more money than it should,
not spending less than it should. I'd rather spend what little I have
myself, thank you.

Jim, this may have been directed at Ed, but ... back in the very early 70's a guy had a problem ... he needed something to happen (I won't go into what, you can probably guess) ... all I know is I saw an arrowhead on a symbol. I don't care what it is or how it is displayed - it indicated 'variable' to me. Understanding depletion zones (and I hadn't seen the symbol before), I took it to mean a variable capacitance diode. Tracing the circuit backwards, I pointed out what had to be done. It worked.

73 from Rochester, NY
Jim AA2QA
ps - this was, I assumed, for experimental purposes.

In article <20010905175702.15285.00000056@mb-cn.aol.com>, k4yz@aol.com (Steve Robeson K4YZ) leaped to an attack on an anonymous troll and wrote:

> We are going to have to put out another "Beware of Lennie" FAQ,
>especially
>about letting him get his toe in the door on his >>1950's<< radio experiences
>in the Armed Forces.

Pisses Stevie off does it? :-)

How about radio experience in the 1960s, the 1970s, the 1980s?

>>Radio is radio, anonymous one. The physics is the same whether
>>designated amateur, commercial, or military.
>
> The physics are the same. That's NOT what we discuss here, Oh
>LICENSELESS One. It's the APPLICATIONS.

Wrong. This newsgroup was created to discuss the morse code test for an amateur license, to take the overflow from rec.radio.misc.

Stevie is not the moderator here, wasn't even here when the newsgroup was created, cannot "rule" on what is discussed. He tries to, though... :-)

In order to get into amateur radio with full under-30-MHz privileges, a morse code test must be passed. That is what I discuss when not fending off gratuitous personal insults... insults which seem to be a private cathartic release for others' own frustrations.

> Of course, with no authorization, (including your "expired" GROL), it's
>all moot for you, huh...?!?!

What "expired" GROL? :-)

>>The US military of over 48 years ago did NOT use CW for fixed-
>>station to fixed-station "traffic handling" on HF.
>
> Sure they did. Not to the degree that they had even a few years earlier,
>but it was still in use.

Untrue. Fixed-station to fixed-station "traffic handling" was done by TTY, either FSK or AFSK on 12 KHz SSB. There was mobile station to fixed station "traffic" using OOK CW on some USN stations prior to the 1970s.

>>The anonymous one hasn't stated his/hers/its
>>"qualifications" OR call-sign
>
> And YOUR Amateur qualifications and/or callsign is...?!?!?!

Tsk, tsk. Big Stevie used to be all up-in-arms, shouting at
other anonymous trollers...when they were hitting on him and
his ideas. Now Stevie support them. Stevie is a supporter?
:-)

>>Not at all. Most amateurs (in here) seem pissed off that
>>there exist professionals in radio.
>
> Not at all...we depend on them.. We are just "po'ed" over ALLEGED
>professionals (such as yourself, for example) who feel compelled to force
>thier
>own standards on "us" all the while belittling us for how we "do business".

Poor baby. Still angry, still frustrated, cannot read previous
postings. Stevie can't admit that there exist non-amateur
radio professionals so he uses the descriptor of "alleged."

Well, I'll just review the "alleged" interest income in my bank
accounts from the "alleged" past professional work and get
back to you... :-)

>>Leonard H. Anderson
>
> Yeah...SURE you are.

Stevie got one right. Things seem to be improving. :-)

In article <20010905173859.15285.00000050@mb-cn.aol.com>, k4yz@aol.com (Steve Robeson K4YZ) writes in furious abandon:

>>It seems to me that long-timer criticsm is growing more strident.
>
>>Remember, the critical old time hams get their fun out of being
>>critical.
>
> They can afford to be. They have "been there/done that".

And seem to think they are immune from civility and manners.

> So far you haven't even "been there", but you are still critical.

I haven't communicated by radio all by myself? Tsk, tsk.
Wrongo, big Stevie.

>>They already have theirs and feel superior.
>
> I am sure you think so. Not being licensed nor participating in any
>Amateur programs you have NO practical experience upon which to base this.

Amateur radio is a "secret" society with nothing of its doings
published anywhere?

> Unless, of course, you refer to the "friends" you frequently cite as
>also being licensed Hams.

My wife and I just had a wonderful visit with Jim Hall, KD6JG,
and his wife at their spacious new home in Cedar Ridge, CA.
Jim has been licensed since well before big Stevie was born.

KD6JG must be an "alleged" person, the same as my "alleged"
professionalism. :-)

> That would explain a lot of why you are in here. I imagine they are as
>closed minded and foolish as you.

Oh my, big Stevie insults people he's never met, doesn't
know, probably hasn't worked on HF. Tsk, tsk.

>>In-person
>>you can see their eyes glow and their muscles tense as they
>>perpare to bait the newcomers.
>
> I was right.

Big Stevie's eyes glowed, he snarled, and furiously worked
the keyboard...a CD played the "Ride of Valkyries" in the
background as he adjusted his campaign hat and wished
for the smell of napalm. :-)

> Yeah...learning is SO over-rated. Especially for someone who took
>fourteen years to get a two-year degree, huh Lennie?

Fifteen years for a four-year degree. It's difficult for someone
who had to travel on the job to attend successive semesters.

Big Stevie could do the same but lacks the resolve...or
ability?

>>God forbid anyone corrects their errors!
>
> You mean like YOU do...?!?!

Of course. I will acknowledge errors that are errors (and
have). I will not acknowledge manufactured errors which
other folks say I make so that they can make message
points.

>>>I guess I was lucky; I ran into old time hams that didn't fill some inner
>>>need by ripping me apart for every false step in my lifetime of learning.
>>
>>Consider yourself lucky.
>
> Why...?!?! That he fell among "average" Hams that would offer to
>help...?!?!

Big Stevie "knows" the "average ham" that Ed Hare was at
13 years of age? I don't think so.

> Of course, this is AGAIN another example of YOUR glaring lack of
>practical experience in the Amateur Radio Community.

Tsk, tsk. Big Stevie is at it again, demanding a license in
order to just talk about getting into amateur radio.

Conundrumism: One can't talk about getting into amateur
radio without already being in amateur radio. :-)

>>In my case I had neither help nor hindrance by pompous long-timers
>>in my teen years. The help and hindrance stuff was spotted on
>>reaching adulthood.
>
> When you REACH adulthood, tell us about it. Until then...go back into
>hibernation, OK?

Ah, so big Stevie is now a judge of adult behavior? :-) :-)

[adult XXX? :-)]

>>I'm still learning as are most of my
>>contemporaries.

>
> Most of your "contemptoraries" (yes, I spelled it right) aren't the
>insolent jerk you are...Thankfully.

Big Stevie knows all, sees all, insults all. :-)

> Kinda like the "ego-driven" types, such as yourself, who are too good to
>sit for the exam because you think YOU know too much already...?!?!

Ah, so big Stevie is judge of everything now and his particular
opinion of anything is THE truth? Anyone not agreeing with
his opinion is open for insults, denigration, and general
nastiness.

I'm discussing the morse code test for an amateur radio license
and feel that it is not required based on other regulations and a
lot of experience in military and commercial radio. Big Stevie
is a traditionalist and has tried to mark his territory by pissing
all over those who don't agree with him. This isn't a debate,
it is trying to reason with a tiny, fire-breathing dinosaur
wearing a Dill Instructor's campaign hat... :-).

> Here we go again with the "lodge hall" mentality rant. We can just
>substitute "Amateur Radio Operator" with "retired electronics technician" and
>it would apply equally well to Lennie.

Big Stevie tries the insult ploy again. :-)

I am a retired electronics engineer. The US government
believes that, the state of California believes that. Stevie
can't believe it, doesn't want to believe it. Tsk, tsk.

> In as much as Lennie demonstates difficulty making accurate assesments
>of images in the mirror, one wonders how he shaves safely.

With a Panasonic cordless electric razor. Wet or dry, it
recharges though magnetic coupling. :-)

> Our local club's youngest ACTIVE member is in grade school.

Big Stevie never graduated from school?!? :-)

> Sounds good...from someone who is NOT a member of the community that he
>has the temerity to set standards for.

"Set standards?!?" Heh, in order to get into amateur radio
with full below-30-MHz privileges, one has to pass a morse
code test. I advocate only the elimination of that code test.
Big Stevie dislikes that. Intensely. So much so that he
cannot argue the point logically, only emotionally and with
personal insults. Tsk, tsk.

The FCC accepts input from all citizens on radio regulations.
They've said so up front, in public view. It's on their web site.
The "temerity" required by any citizen desiring to affect

changes in any radio service regulation is nothing more than the "temerity" required to compose a reasoned, logical statement. The FCC does not require an already-granted amateur radio license in order to accept input on regulations concerning the amateur radio service. Big Stevie thinks so.

In at least two other threads, big Stevie has made political commentary of a general nature...yet he has not presented any qualifications as a political expert on affairs not about amateur radio. Hypocritical attitudes. Tsk, tsk. :-)

>Pisses Stevie off does it?

Hardly, Your Loserness. As a matter of fact, your frequent lamenting about the tales of "old timers" interspersed with your OWN "back in 1954..." tales only serves to prove what several of us have been saying about you for years.

You are two-faced (among others) and your hatred of anything "Amateur" negates anything constructive you MAY have had to offer.

>How about radio experience in the 1960s, the 1970s, the 1980s

You were a licensed Amatuer in the 60's, 70's, or 80's...?!?!

>Wrong. This newsgroup was created to discuss the morse code test for an amateur license, to take the overflow from rec.radio.misc.

It doesn't matter. Review of the FACTS demonstrates that it has outgrown THAT "charter" YEARS ago.

And in ANY case, how do radio PHYSICS have anything to do with the Morse Code test...?!?!

Mind you, Lennie, YOU are the one arguing what this NG is SUPPOSED to be for...which begs to ask WHY you discusss ANY matter OTHER than Morse Code if it's such a nit-pick for you.

Again, you are two-faced. Such things ONLY apply when they suit you.

>Stevie is not the moderator here, wasn't even here when the newsgroup was created, cannot "rule" on what is discussed.

Un oh...Uncle Lennie is exerting his "tenure" here again...An "old fart", by his own definition.

>In order to get into amateur radio with full under-30-MHz privileges, a morse code test must be passed.

Ya think, Lennie? Perhaps international treaties which are in place have anything to do with it? Oh...I forgot...Lennie doesn't believe that the United States is bound by those treaties...Guess we need Phil to realign your gyros for you again, lennie?

>That is what I discuss when not fending off gratuitous personal insults.

Perhaps if you weren't so gratuitously insulting, you wouldn't have a problem.

>insults which seem to be a private cathartic release for others' own frustrations

Nope. I am licensed. You aren't. Seems YOU are the one with a frustration problem.

>What "expired" GROL?

Oh LENNIE! Shall we remind the Google Surfers to look at your comments of October past when you asserted that you were allowing your GROL to "expire" on October 12th..?!?! (Hence the quotation marks on "expired"...?!?!)

SUCH A CARD! And the excuses you tried to pass on for your obvious lack of awareness of your OWN license...!!!!

Well...I guess we shouldn't be surprised. You continue to insist you have such carte blanche access to the RF spectrum by virtue of same GROL when same GROL FORBIDS your operating without the benefit of appropriate FCC station licensure.

You DO read your license documents, don't you, Oh Licenseless One..?!?!

>Tsk, tsk. Big Stevie used to be all up-in-arms, shouting at other anonymous trollers...when they were hitting on him and his ideas.

Yep. Still do.

> Now Stevie support them.

Naw...just amazed that EVERYONE that comes here, "anonymous" or otherwise, seem to formulate the same opinion on you.

Except, of course, your own anonymous "cheering section", ie: MegHz and others......They support YOU!

(And I might add that YOU have not a negative word for them vis-a-vis THIER anonymity...Again...the two-faced Lennie prevails)

>Poor baby. Still angry, still frustrated, cannot read previous postings. Stevie can't admit that there exist non-amateur radio professionals so he uses the descriptor of "alleged."

I read fine, Lennie. It's just that your conduct here, including your OWN "denigrating" comments are those of anything BUT a professional.

>Well, I'll just review the "alleged" interest income in my bank accounts from the "alleged" past professional work and get back to you

There's a lot of dope peddlers out there with big bank accounts. Can you PROVE where the income came from..?!?!

Lennie resorting to "mine is bigger than yours" in order to make some point?

>Stevie got one right. Things seem to be improving.

They were until you showed back up again.

>And seem to think they are immune from civility and manner

Again...coming from you, this is laughable.

>I haven't communicated by radio all by myself? Tsk, tsk. Wrongo, big Stevie

You DO have a license, Lennie...?!?! Please tell us!

>Amateur radio is a "secret" society with nothing of its doings published
anywhere?

I would again ask you to please tell us of your accomplishments in the
Amateur Radio Service, but the waste of bandwidth is almost criminal..

>My wife and I just had a wonderful visit with Jim Hall, KD6JG, and his wife at
their spacious new home in Cedar Ridge, CA. Jim has been licensed since well
before big Stevie was born.

Well WHOOPIE DOOO! But that has NOTHING to do with the fact that YOU
assert that Amateurs make some sort of facial contorsions at the prospect of
supposedly harrassing "newcomers".

This "face" is one that you would have to personally witness, and I assume
that since KD6JG is one of the people whom you insist on embarrassing as being
an acquaintence, that he is one of the one's who engages in this behaviour.

I am sure he owns a nice home.

>KD6JG must be an "alleged" person, the same as my "alleged" professionalism.

Nope. He's a real person. And your "professionalism" IS alleged. It's
been absent in here.

>Oh my, big Stevie insults people he's never met, doesn't know, probably hasn't
worked on HF.

Unfortunately for him, "guilty by association". Perhaps he should pick
his "friends" more cautiously...or better yet, perhaps YOU should have his
consent before slandering-by-association.

>a CD played the "Ride of Valkyries" in the
> background as he adjusted his campaign hat and wished for the smell of
napalm.

Only on Lanark Drive...and only after safely evacuating the neighborhood.

>Fifteen years for a four-year degree.

Oh Dopey Me.

>It's difficult for someone who had to travel on the job to attend successive semesters.

One of my USMC colleagues completed his Masters in eight years...WITH deployments.

I guess the frequent changes in employment that you have told us about is reason for that, huh...?!?!

>Big Stevie could do the same but lacks the resolve...or ability?

I lack the same resolve to take 15 years to get a four year degree?

>> Of course, this is AGAIN another example of YOUR glaring lack of
>>practical experience in the Amateur Radio Community.

>Tsk, tsk. Big Stevie is at it again, demanding a license in order to just talk about getting into amateur radio.

Nope...It's about YOUR lack of experience to discuss Amateur matters from the point of practical experience.

You have NONE. Inside "the box"...?!?! Sure. You know your stuff.....ABOUT Amateur Radio..?!?! You know squat.

>I advocate only the elimination of that code test.

Then let's see how long you can argue that and ONLY that, Lennie.

>So much so that he cannot argue the point logically, only emotionally and with personal insults.

Well, Lennie, you primed the pump. Shoulda stuck to facts and civility yourself, Your Loserness. We wouldn't be at this juncture, now would we...?!?!

Lennie, WHEN will you learn? Your sleights, insults and demeaning conduct will no longer be allowed to pass without challenge. Your "arguments" were long ago told and are no longer relevant, just like you.

>In at least two other threads, big Stevie has made political commentary of a general nature...yet he has not presented any qualifications as a political expert on affairs not about amateur radio.

And unlike you, I have not tried to present myself as an expert on said matters. Just a citizen with an opinion.

YOU hold yourself up as some kind of expert on Amatuer matters and hope the neophytes in this forum will sit up and take notice. You attempt to "impress" us with your CV, hoping further that no one notices that your one and only "exposure" into Amateur Radio was as a writer for a now-defunct magazine.

You know nothing of Amateur MATTERS, and that you have NO experience in Amateur PRACTICE. No one, EXCEPT you argues that this is anything but Amatuer Radio, yet you insist on trying to make it appear as such.

>Hypocritical attitudes.

Yes, you do have them. I agree.

Okay, but the thread had evolved to the point where we were discussing the
survival of Morse code sans FCC testing. Dick does not believe that the mode
has enough use and value that it will survive without testing and I believe
that it does.

>CW will survive and continue to flourish in amateur radio as long as
>hams continue to use it and promote it on its merits.

Amen, Jim. I will add that those that demote it in an attempt to keep the FCC testing it will not have done themselves or the continuation of the mode any favors. When the FCC drops morse code testing, or at least most of it, promoting the merits of CW will be all that they have left, just like every other mode. I wonder how many of the words some say today they will have to deny saying?

It is legal to transmit on any amateur frequency without a license, either at high power in a true emergency, or at a very low power level.

Dick:

Why do you want the open comments about emergency communications to turn into a contest about who loves or hates CW? It has nothing to do with the discussion (well, at least from the perspective of discussion).

"prepared" means what in terms of emergency communications? We must be reasonable in our own expectations. We cannot be "prepared" for everything available to us in an emergency. Cost, alone is prohibitive. Your insistence that, because CW is not given priority among many emergency commuicators, we are not prepared goes beyond reasonable. We value CW operators, APRS, slow scan, voice, packet, etc.--and each has its importance in emergency communications (as well as any time). Priority is given to voice modes because that is the easiest, most commonly available mode.

Well, yeah, and if I am a ham with my equipment in an airplane crash in a
land that doesn't speak my language--we'll all die. And, if the *only*
equipment I happen to have in some other disaster is ATV or slow scan
capable only, then we'll all die....and on and on

>I found the field strength decreasing with the square, cube...
>tenth power of distance as the soil conductivity went to zilch.

That is one example of what I was thinking of. Another would be to put an antenna over a good ground plane and note what the E and H fields do as you get near the ground.

The applications for considering the fields separately are numerous. First, the RF exposure regs require that one comply with E-field and H-field exposure as separate entities, so if you are near the ground where H increases and E goes to zero (perfect ground), you can't measure the E field and say you are okay.

Most field strengths specified in FCC regs are in volts/meter, or some equivalent of same, although in the far field of both the antenna and any scatterers, one could measure the H field and reasonably assume the E field from there.

>It is truly amazing how having to repeat a set of field strength measurements
>in 100-degree, Texas weather clarifies one's mind concerning the

Never had that experience. I guess I am still learning. :-)

Perhaps so, but you have certainly justified continued CW testing because CW might be a last-resort mode under some circumstances. I might find that credible if you were also proposing rules changes that would place the same mandate on capability for the other modes that might be higher on the "resort" list.

Your example does little to cause me to think any differently, Dwight. While it would probably not be the norm, the fact that your good friend who was a Technician was part of the community this nit-wit was addressing is proof enough that people who act like that quite often defeat themselves.

As an emergency communicator, there are two attitudes I have: an agency can choose to consider ham radio as an asset to their efforts. For that I will advertise, advocate, and practice. An agency can also choose to ignore the benefit that ham radio can bring to their efforts. For that I will advertise, advocate, and practice. The walk along the way prepares me, and gives me the opportunity to encounter as many challenges as it may take me to "get the point across." If the point is never well-recieved, that is not my problem. If the naysayers gather with the naysayers, that is not my problem.

>The attorneys did their job.

Just as she expected them to do. She didn't need me to tell her
that the now-deceased judge hearing the case was a total rectum -
she figured that out for herself while waiting for her turn in voir
dire.

The case was equally fishy - the defendant was a postal employee
accused of mishandling (not stealing) $1.01 found loose in the mail.
Apparenmtly he didn't hold it up over his head when he carried it
from his workstation to his supervisor after calling out "money
found in the mail". If it wasn't more than $1.00 they couldn't
bring the case....$1.01 indeed. The guy was a union agitator and
the case appeared to have all the indication of a typical Postal
Inspectors sting.

And when we needed the Postal Inspectors to serve a CB Cease and
Desist Order on a postal foreman who was refusing delivery of the
Certified Mail, they tap danced around and refused.

What my wife said was absolutely true......

If it involves the Top Three as we used to call them (White House
Communications, other military and Federal communications, and
civiliab public safety communications) the US Attorney and the
courts can act pretty quickly. And it doesn't even have to involve
an intentional violation. We once had to get a warrant and the
Marshals to be able to pass through an uninvolved locked property to
DF and silence a distress beacon that had been stored on an adjacent
property.

Dissing the FCC is not smart, as at least one radio station owner
and manager found out "on my watch" because when we started peeling
the layers back we found that the licensee had abandoned any sense
of control of the station and was using it to launder some other
version of dirty clothing..... <ggg>

Yes, but how would you have an every day conversation in CW? I mean, just an "over the fence" kind of chat? Again, I am not saying CW sucks, etc. I just don't understand the philosophy that it is as achievable a language over any other. CW is as effective, for example, as maybe a conversation in Latin. Very limited.

OK so what's the deal with this Len character? What was the emergency he had playing with his multiple multiK amps while a section 8 in the big war?? What was was the emergency?? What has military operation on any frequency at any time especially in those ancient times of the 50's and 60's got thing one to do with amateur radio. Why does Len insist on trotting out some old resume like it makes him king shit of the RF world?

Quite frankly it's getting old.

Of course Ed, you could chose to realize this but no.....sorry dude, no circle for you this round.

And yes Len, permanent can mean either..you chose there big fella...either way, you go girl is best for all concerned.

Loved the story you had about the ham visiting...a story for every occasion, just like that Cecil fellow in Oklahoma, or Texas..one of those redneck states down where it's hot all the time. Both of you..no matter what..a story to fit the need, whether running out of gas and using a 706 as a CB or Len taking Hamburger Hill with nothing more than a loaded stapler and an idea

Don't know which is worse..the need to be better hams or the losers like Len who need to prove their manliness by being old badasses

Nope, it changes. It was you who insisted on accuracy, so accuracy
we'll have.
When you change the load on any voltage source, you also change the
applied voltage. You can't get around it, Mr. Ohm says so. Ever hear of
source impedance? Your voltage source is in series with the load. It is
a series circuit which follows all the rules of Ohm's law for series
circuits. If you don't believe it you can easily prove it with a simple
flashlight battery which has been used till it gets weak. Check the
voltage on the battery with no load, and it will be very close to the
rated voltage. Check it under load and you find that it's source
impedance has changed so much that the voltage will read significantly
lower under load.
Yes, that's different, you're using a voltage source that has
significantly changed its own source impedance. But the principle
remains. Whatever the source impedance is, it is in series with the load
impedance. Change the load and you WILL change the applied voltage. You
can't avoid it.
I know, we can safely ignore it for routine use. But don't forget, you
want total accuracy.

Happens all the time in circuits and in
> the radiated fields from antennas, if you change the "circuit" parameters.

I have no argument with any of this, it's the daily routine of radio
engineering. We may safely ignore small changes in variables when they
cause no significant changes in the overall situation. But you wanted
accuracy.
I happen to believe that it is more important for hams to know that the
total power reduces as the square of the distance.

> at all to the actual wealth of a country.

I agree with most of the above. If you want to get technical, you
could also note that we are the government; therefore, government's
money is its own, etc., etc.

I do take issue with the notion that "government can not create
wealth". Government, like private individuals, can invest funds. In
so doing, wealth can be created or lost. Additionally, government has
human capital (employees) just as does private industry, which is the
economic source of wealth.

>
> Please explain how taking money from the people makes them better off.

I believe the main (legitimate) reason for the existence of government
is to accomplish things that need to be accomplished as a society.
There are things we need to do as an organized group, simply because
doing them this way is more efficient. The most obvious of these is
probably military defense -- groups are much more effective at defense
of life and property than disassociated individuals.

There are quite a few things that are better accomplished by groups
than individuals. To this end, representative government serves as
the group's tool. Needs that group spending can meet that individual,
private spending cannot or will not are obviously candidates for
"making people better off" than they would be otherwise.

And let's be clear: there are quite a few things that private industry
and markets are better at accomplishing than government spending and

oversight. I'm a pragmatist, though, and tend to favor what works.

I 'assume the worst'??? Surely you jest.(No, you just want to slam me whenever and however you can. Must be the soak-your-head thing.) So some new ham who I never knew existed comes on the channel and does his best to blast me out of the water, and shows his lack of knowedge on ham radio in general and in spades on CW, all the while insisting I am a discredit to the ARS, and it would be far better off if I left, and I'm just supposed to roll over and turn the other cheek. You can do that if it suits your temperament, but you surely know it doesn't suit mine.

Is that really what you want people to believe? That you are slamming all new hams for not entering ham radio because they don't want to learn things and that they are deliberately not learning things as they set about to take their tests.

Can you explain why you were doing this long before your new enemy Drpfrench came on "channel?"

Dick, don't take this personally, but I think it is amazing that ANYONE can actually learn anything when they are yelling.

It is not ALL about you, you know.

Why would you be insulted because I don't believe that most people are able to learn while they are yelling? Gosh, it is hard to tell what is going to set you off.

We are not talking about me, Dick. If someone hears you using CW to send an SOS and he/she doesn't know Morse code (like 99.9% of the human race doesn't know Morse code) you are simply SOL. Why not choose a mode that is understood by the receiving station, you know, the one from which you need help?

You missed the point, Dick. If CW is your mode of last resort and
the receiving station doesn't know Morse code, you are simply $hit
out of luck. Why not prepare to use an emergency mode that more than
0.1% of the population understands?

If CW is the only mode available when you are in trouble and you are the
only one who knows Morse code, what are you going to do? - feel really
stupid and wish you were better prepared, that's what you are going to do.

> So you would rather hams preclude themselves of even the possibility of

Wherever did you get that idea, Dick? I have storage food and water for
emergencies. I recommend that everyone have storage food and water for
emergencies. I don't advocate governmental force from the feds to
require everyone to have storage food and water. I believe in freedom.
I believe all hams should have the freedom to choose their mode(s).
That is not denying anybody anything. It is accepting the
responsibilities that go along with freedom.

They are simply getting some of their hard-earned money back. If
you don't like that, why don't you move to Cuba where there exists
an economic system more to your liking.

How you can think it's fair for 1% of the taxpayers to pay 20% of
the taxes is beyond belief. That those people are getting back
40% of the tax cut (if that's true) is just a mathematical
curiousity. They are simply being allowed to keep money that
they earned fair and square in the first place. Unlike you, I
don't think that the products of an individual's life belongs
to the state.

I have a different view of what he says and it seems to me
to be nothing more than "I had to take that morse test and
so should everyone else!" :-)

He has aligned himself as a champion of morse testing
and cannot budge from that. Vindication can only come
from hanging in there with his viewpoint until all others
get tired of arguing the case.

Other mileages will vary, of course, but I'll hang onto my
opinion of what Dick is trying to accomplish.

> Again...coming from you, this is laughable.

Who kept calling another "putz" over ten times?
Who kept insulting another by trying to imply a lesser work-career title?
Who not only insulted another directly but also his wife and friends?

>>Amateur radio is a "secret" society with nothing of its doings published >anywhere?
>
> I would again ask you to please tell us of your accomplishments in the >Amateur Radio Service, but the waste of bandwidth is almost criminal..

Answer the question, big Stevie. Is amateur radio a "secret" society that can only be discovered or observed by entering the lodge hall?

> Well WHOOPIE DOOO! But that has NOTHING to do with the fact that YOU >assert that Amateurs make some sort of facial contorsions at the prospect of >supposedly harrassing "newcomers".

What in the world are you talking about, little Stevie?

I did not name "all amateurs." I named only two in particular, yourself and Dick Carroll.

> Unfortunately for him, "guilty by association". Perhaps he should pick >his "friends" more cautiously...or better yet, perhaps YOU should have his >consent before slandering-by-association.

Have you heard of tranquilizers, little Stevie? You are insulting people you've never met, never worked, know absolutely nothing about...all for the purpose of trying to insult me. Tsk, tsk.

> Oh Dopey Me.

True. :-)

> Nope...It's about YOUR lack of experience to discuss Amateur matters >from the point of practical experience.

Still trying to ride that tired horse? :-)

> Well, Lennie, you primed the pump. Shoulda stuck to facts and civility
>yourself, Your Loserness. We wouldn't be at this juncture, now would
>we...?!?!

What "juncture?" :-)

Little Stevie is getting his chains yanked and is too numb to
feel them. Pore lil feller. :-)

> YOU hold yourself up as some kind of expert on Amatuer matters and hope
>the neophytes in this forum will sit up and take notice.

Nope. I don't need to impress anyone.

>You attempt to "impress"
>us with your CV, hoping further that no one notices that your one and only
>"exposure" into Amateur Radio was as a writer for a now-defunct magazine.

Heh, heh, heh...that "defunct magazine," all 22 years of it, will
be available on CD-ROM from the ARRL for $149 (or so).

Good grief, lil Stevie, you stop at nothing to vent your bile. By
continuing to bray "defunct magazine" you insult a number of
good radio amateurs: Skip Tenney, the late Jim Fisk, Alf Wilson,
Rich Rosen, Terry Northrup.

Nothing seems sacred to you when it comes to trying to earn
message points. Tsk, tsk.

> You know nothing of Amateur MATTERS, and that you have NO experience in
>Amateur PRACTICE. No one, EXCEPT you argues that this is anything but
>Amatuer Radio, yet you insist on trying to make it appear as such.

Amateur radio involves communicating by radio. I know radio
communications and have been "in practice" doing so in both
commercial and military radio services.

I'm just trying to quash the false belief that OOK CW is the
epitome of communications, so much so that it MUST be
tested for a full below-30-MHz amateur radio license class.
That's the only "appearance," lil Stevie. Live with it. You
have no other choice. An appeal to the FCC (ten days after
closing of Comments) on 98-143 that they should disregard
my Reply to Comments was itself disregarded.

Quit being a sore, frustrated loser in arguments. You can't
cut it there, can't control yourself. Now go on out and get
one of those tranks and calm down.

>OK so what's the deal with this Len character?

There's no "deal" with this "Len character," anonymous troll.

>What was the emergency he
>had playing with his multiple multiK amps while a section 8 in the big
>war??

Thank you, anonymous person, for considering the Korean
War "the big one." [that's the only thanks you get for this
message, troll]

>What was was the emergency?? What has military operation on any
>frequency at any time especially in those ancient times of the 50's and
>60's got thing one to do with amateur radio.

What's your problem, troll? Got all those personal frustrations
boiling up inside you that require you to insult others on topics
you know nothing about nor care to know about?

Let me explain as to a child (for you act like one): The US
military has not used morse code modes for messaging
fixed-point to fixed-point for a half century. It hasn't used
morse code modes for any tactical, routine communications
for two decades. The USCG doesn't monitor the 500 KHz
maritime emergency frequency anymore.

The only radio service still using morse code is amateur and
some amateur ding-dongs insist that it must be kept alive
so that the amateurs remain "a pool of trained operators for
the nation." Not so. There just isn't any need for a "pool of

trained CW ops to help the nation." No other radio service
in the US uses morse for communications.

In US amateur radio service, the FCC does not mandate
use of morse modes. Such is as optional for amateurs to
use as any other allocated mode. There is no logical point
in maintenance of morse testing for any amateur license.

>Why does Len insist on
>trotting out some old resume like it makes him king shit of the RF world?

The unknown anonymous one turns potty mouth. :-)

To those whose only life experience with radio is hamming
and CB, someone with a fair amount of commercial or
military radio communications experience might seem like
a "king sh*t of the RF world." :-)

Such remarks indicate a resentment of non-amateur radio
people. That's a personal problem for the unknown,
anonymous potty-mouths. Anonymous person has to achieve
a cure for that in order to "play well with other people."

>Quite frankly it's getting old.

So are anonymous potty-mouths...much more so.

>Don't know which is worse..the need to be better hams or the losers like
>Len who need to prove their manliness by being old badasses

Poor baby. Upset because you can't throw names at others
without getting return fire? You must be terribly frustrated off-
line, needing the catharsis of hiding behind a pseudonym.

"Manliness" isn't "proven" by hiding behind a handle. [one has
to wonder if there is a "handle" there to handle...]

No go over to rec.radio.misc where name-calling and potty
mouth insults are the norm. You will be right at home there.

>
> You are two-faced (among others) and your hatred of anything "Amateur"
>negates anything constructive you MAY have had to offer.

Not thinking straight there, lil Stevie. I have no hatred for
amateur radio. I do get tired of certain individual hams who
cannot argue a subject on the subject merits but must
resort to personal insults as a "reply."

>>How about radio experience in the 1960s, the 1970s, the 1980s
>
> You were a licensed Amatuer in the 60's, 70's, or 80's...?!?!

DOS Tip, ignorant lil Stevie: There were lots of radio services
in the 60s, 70s, 80s, not to mention the 50s and the 90s.
The number of non-CW-using radio services have continued
to grow since the 1950s. You really should try to keep up
with the times.

> And in ANY case, how do radio PHYSICS have anything to do with the Morse
>Code test...?!?!

Good question. From what others say, tested knowledge of
morse code is essential to "knowing" amateur radio. :-)

>>In order to get into amateur radio with full under-30-MHz privileges, a
>>morse code test must be passed.
>
> Ya think, Lennie? Perhaps international treaties which are in place
>have
>anything to do with it? Oh...I forgot...Lennie doesn't believe that the
>United
>States is bound by those treaties...Guess we need Phil to realign your gyros
>for you again, lennie?

Nice try at fabricating another falsehood, lil Stevie.

DOS Tip #2: "International treaties" (Robeson's name) on civil
radio are changeable at World Radio Conferences by vote of
the representative administrations. Those standards and
recommendations (they have no direct force of law by themselves)
are changeable. They don't last forever.

I do not recommend breaking any law and I don't favor breaking
any international agreement arrived at by democratic means.
ITU standards and recommendations are agreements and are
not a "treaty" by themselves. International agreements
become national law only on the action of administrations.

My "gyros" are well aligned. :-)

Let's skip the virtual expiration of a GROL that was originally a
First Class Commercial Radiotelephone license since lil Stevie
never had either one... :-)

>>Poor baby. Still angry, still frustrated, cannot read previous postings.
>Stevie can't admit that there exist non-amateur radio professionals so he
>uses the descriptor of "alleged."
>
> I read fine, Lennie. It's just that your conduct here, including your
>OWN "denigrating" comments are those of anything BUT a professional.

Ah, yes. lil Stevie is a "judge" of civil comporment. :-)

>>Well, I'll just review the "alleged" interest income in my bank accounts
>>from the "alleged" past professional work and get back to you
>
> There's a lot of dope peddlers out there with big bank accounts. Can
>you PROVE where the income came from..?!?!

Absolutely. :-) The IRS is my proof. They have no problem
with my income. Why does lil Stevie have to fabricate a lie
implying income from illegal drug sales?. :-)

Financial planning for retirement must begin early...like before
a military pension is available. Too bad that so few have such
military pensions, isn't it?

Now, lil Stevie, just why is anyone's income such a "needed"
topic about amateur radio? And why does it involve illegal
drug sales? Do you drool over having a Yaesu FT-1000 and
can't afford one? Your problem there, not mine. :-)

Well, Ed, you are going to have to accept my life experiences
just like I have to accept yours. I'm sorry those don't agree,
but that's how it goes.

I don't expect anyone to "flock to me" or my viewpoints, just
stating what seems to be obvious to any observer. Trouble
is, a few others in here have said words similar to "flock you!"
and that isn't well-received. :-)

I use "punctuation like that" to avoid spelling out words that
are not acceptible to some of the more victorian persons
present here. Goodness gracious, those prissy victorians
get so upset! :-)

I'm lost even now trying to do that...

> AUDIBLE - Musically or language associated- some learn it as a song or
word --
> dah dah ditit -- The zebra did it. dah dah di dah -- here comes the
bride -
> queen. Code Quick does this with mnemonics.

Again, I still can't copy someone doing the dah di dah.

>
> AUDIBLE - INVERSE - Some study the opposites A then N, K then R, etc.
>
> AUDIBLE PHONETICS - Some learn by associating it with the NATO Alphabet
i.e,
> dit-dah followed by A or ALPHA after a while you will hear dit dah and A
or
> alpha pops into the brain.

I might not phrase it the same way, but I did learn it by sounds.
O.K....So I memorized the 5 WPM, but after that it was only sounds.

>
> PATTERNS -There are patterns in morse code letters. For example: the
letter A is
> similar to the letter W except that the letter W has an additional dah to

it.

I think "for me" there were areas, or speeds where I could do this and
areas/speeds where I couldn't.

> TYPING - some find that they have an automatic reflex to hearing a
character and
> hitting the right key on a keyboard. Check with your VEC if they will
allow you
> to take the test this way. One of our local examiners does allow this as
well as
> a Braille keyboard for the blind.

Out of all the tests I found the Extra the easiest as I'd learned it like a
language by then. (by then I'd been a ham for a long time <:-))) It was
hearing word sounds...Problem was that I had to learn how to spell all over
again and I no longer heard letter sounds.

>
> SENDING - Some folks learn better or improve by sending with a key. Others
read
> signs while driving on the highway. This is usually in conjunction with a
> listening method.

For some, the sending can be a henderance as they can send faster than they
can copy. Others find it to be an aid.

>
> CHARACTERS - at 5 WPM it is feasible to repeat (or count) the dits and
dahs in
> your head and pass the test --- this is the hard way and Farnsworth makes
this
> tough - not recommended but may be the only way for some.
>
I have a devil of a time copying the Farnsworth way as it doesn't sound like
it does on the air where the letters, words and spaces are all at the same
speed (with some notable exceptions <G>)

> PLAIN TEXT VS MIXED RANDOM CHARACTERS. Studying Morse in plain text gives
the
> advantage of being able to anticipate what is coming next where mixed
random
> characters - ya gotta know them all. Maybe practice both if that works for
you.
>
It's a good way for learning...I think...But not helpful "for me" to get my
speed up when copying conversation.
I spent about 3 weeks with the receiver turned up to a comfortable level
while working on equipment. If I stretched out on the couch, I'd first tune

in a good conversation going just a bit faster than I could copy. One day I realized that it was like listening to some one talking.

> KOCH METHOD - Learn morse code using high speed random characters.

"To me" this would be by far the most difficult method of all.

>
> FARNSWORTH - All tests are soon to be given at 12 WPM character speed, 5 WPM

After running into people transmitting this way, I find I'm learning to despise the code that is sent this way as well as the guy who came up with the method. On the bands it can be very difficult to seperate words when you run into this ... Even when writting it down, you have to go back and seperate the words. Good code that is properly weighted and has the proper spacing between letters and words is much easier to copy.

> overall speed - if you are tested in Farnsworth -- then study that way --
> several who have studied straight 5 WPM - couldn't copy a darn thing in
> Farnsworth.
>
> BRAIN SOAK - Some folks give up on methods and just pain listen to code practice
> until one day it just all comes together. The impediment to increasing speed and
> proficiency is called a barrier

Always heard it called a hurtle <:-))

As you said at the beginning...It varies from person to person.

Did you know that AOL was voted the most distrusted service on the internet
in a recent poll according to GMSIV? Microsoft came in second.

And if you listen closely you will hear at Chrismas time the Mannheim Steamroller. Or catch them live in Milwaukee when Chip Davis visits his family and finds a way to turn a buck and write the visit off on the old 1040.

In his younger days, he was responsible for the early recordings of one CW McCall, a local ad man who invented the character for a series of commercials for a bread company in Sioux City wanting to sell their wares in Omaha. For the collector of really bad music, I can but recommend Wolf Creek Pass in which the background appears to have been done by six bored housewives dragged in off the street (which comes close to reality BTW). Old CWs major hit was as the Rubber Duck in Convoy. He got on with Midland and toured but hated country music with a passion. Last I heard he was mayoring in Western Colorado.

Listen for a hyper version of Deck the Halls that sounds like it is on a synthesizer. Every ad agency in the planet uses it at Christmas. Except for Sears that plays Marching Thru Georgia at double speed.

As an AOL subscriber, I can tell you that that mistrust is well deserved. Some may remember the time that AOL ended up bringing down the ARRL.ORG email system for 3 days. When I contacted them to try to resolve it, they didn't care one whit and it turned into quite the argument.

You may be right. I guess I think more in terms of what his "trying to accomplish" will actually accomplish. Telling people that CW does not have enough value that it will be used in the Amateur Radio Service without testing does not even support continued testing. If he tells the FCC that CW has no value when he files his comments to the inevitable rulemaking procedure, one of the nails in the coffin of CW testing in the Amateur Radio Service will be his.

Their premise is that CW use within the Aamteur bands will be of national value when it handles emergency traffic when conditions on an HF circuit deteriorate to the point where SSB is not effective.

If maintaining that capability were the real goal, perhaps a rules change that requires hams to have functioning equipment capable of operating SSB on ALL HF amateur bands would be more effective. If 5 MHz gets added to the Amateur spectrum, I think that it will be very rare indeed that any two points within the US will not have good propagation on some Amateur frequency.

>surplus, then we are either doing some creative accounting or mangling
>the English language.
>
It's creative accounting. And a calssic example of the political roosters
taking credit for the economic dawn.

The "surplus" happened for a bunch of reasons:

- Very low interest rates (govt. spends less on servicing the debt - at one
point recently more than 33 cents of every Federal tax dollar went to pay
interest)
- Low unemployment (more people paying taxes, particularly SS taxes)
- A long period of economic growth without significant inflation.

This has been going on for so long that many folks have begun to think it's the
natural order of things.

What is forgotten in all this is the bazillion-dollars of accumulated national
debt. The debt quadrupled in the 1980s, and will takes decades to pay off. The
Surplus should go to paying down that debt, not paltry refunds of a few hundred
dollars.

What is also forgotten is that the current economic conditions are bound to
change in the future.

The situation is like a family or business that has been running in the red for
a long suddenly getting an adequate income so that some discretionary money
appears. The family/business has a ton of debt and lots of things that will
need maintenance or replacement, but instead of paying down the debt and laying
something aside for the future, the money is spent on luxuries. Does that make
sense?

Context, Jim, context. The question was "why should CW survive" not :why should
the CW test survive". The above reasons are to support the mode, not the test.

In fact, if you look back in that post of mine you'll see that I disagreed with
the idea that the test was needed to keep the mode alive.

Your analogy doesn't quite fit, because horses have all but disappeared from the nation's roads and highways. But CW signals are common in the ham bands, particularly the HF/MF ham bands.

A closer analogy would be whether driver's tests MUST include skill in using a clutch and manual transmission.

...and vindication can only come from hanging in there with your
viewpoint until all others get tired of arguing the case? Yours is the
"I am a professional in electronics and shouldn't have to put up with
this stuff in order to obtain an *amateur* license" viewpoint.

Since you appear to be the typical geezer in a Lazy Boy, I doubt we'll
ever actually hear you on any of the ham bands. You'll gum the issue to
death but never make the first step toward doing anything.

Trying to say that you know all about amateur radio from reading about it is like saying that you know all about the Okavango Delta because you saw a program about it on the Discovery Channel. It is like saying that you understand all about golf because you read a book on the subject. You tell us what is good and bad for amateur radio and you haven't even achieved newcomer status.

Taxi dispatching involves communications by radio.

Not likely that I'd miss operating on a band, Ed. I like the Rod Newkirk ditty: "You might have heard me anywhere. Name a band and I was there".

>As most people in this post I am not the worlds number one fan of CW. But why
>shouldn't it survive? For those that want to use it, fine.

There's no reason at all it shouldn't survive...on its own merits.

The issue is and always has been the desire by some CW
advocates to maintain a government mandated requirement
that all HF hams pass a CW test. The basis for that logic
is that by mandating all HF hams to learn it, there will be
some of those hams that take a liking to it.

If the ONLY reason CW is still around in the ham ranks is because
of the above process (mandated testing), then it will eventually
go away when testing ends...BUT that is of no fault of anyone
other than the CW devotees who would (if CW went away) have
failed to take up the challange to be advoctes of CW and recruit
new devotees.

Cheers,
Bill K2UNK

>OK so what's the deal with this Len character?

Allow me to explain, altho I have a bit of a jaded opinion....

Len Anderson is retired from the electronics field. At one point in time he even wrote a few quickly forgotten pieces in a long-since defunct radio magazine.

Lennie now believes that he and he alone, based upon his "career" in "professional" radio nows knows what is best for AMATEUR radio. Most of this, however, is a front for his argument that he should be allowed to NOT take ANY Amateur examination since he already knows it all and has done it all. Hence his "Hams want to make everyone do it the way THEY did" rants. Sitting for a test that nine-year olds can pass is insulting to him.

He quickly points out that this is at once a "code test policy" newsgroup, yet feels quite at liberty to take the conversation in any tangent he cares to as long as it supports his rant. But only as long as it does.

He has insulted nearly everyone here, yet takes significant insult with anyone who dares to stand up to his bullying tactics. His insults extend to various organizations and volunteer groups that suit him at the moment, including the Red Cross, Civil Defense, the Civil Air Patrol, the ARRL and others. I have lost count.

You will see him toe-to-toe most often with me. When I first came here I received several "private" e mails from him outlining his particular opinions, but when I told him that I appreciated his points I DIDN'T agree with them he PUBLICLY started in calling me a "jack-booted Nazi", a "thug" and "elitist".

However when called on his insistent anti-ham rhetoric and his own personal vendetta against some Hams, he simply slides back into the "it's my right" argument and washes off any responsibility for his own behaviour.

>What was the emergency he
>had playing with his multiple multiK amps while a section 8 in the big
>war??

Lennie the Licenseless is quick to bemoan any ham who dares to suggest that they have any remembrances past yesterday, however he is as quick as a match to remind us that as a member of the Armed Forces he was allowed to play

with HF radio gear...in the FIFTIES. Of course the big argument there is that he did not require a license to do it.

>Why does Len insist on
>trotting out some old resume like it makes him king shit of the RF world?

Because like many others at his stage in life, he is both trying to cling to what remains of his life, while simultaneously trying to embellish his "record" to place himself just a bit higher up on the pedestal that he has cast for himself.

>Quite frankly it's getting old

Trust me...if you stay around any amount of time and try to discuss ANY topic of Amateur policy, you will see it over and over...And WORSE is the fact that no matter what "policy" you care to discuss, Lennie will find a way to draw it into the "code debate" as somehow being "evidence" of a ham conspiracy to keep him and his tekkie buddies out of Ham Radio.

>Don't know which is worse..the need to be better hams or the losers like
>Len who need to prove their manliness by being old badasses.

We try, but Lennie insists that "better Ham" can only be achieved through him...kinda like the Messiah of Amateur Radio..and we "almost" believe him....yeah, right.

>Got all those personal frustrations boiling up inside you that require you to insult others on topics you know nothing about nor care to know about?

Pot/kettle/black...AGAIN, Lennie. You seem to have no problem on addressing any number of topics of which you are ill-equipped to discuss from an informed position.

> Let me explain as to a child (for you act like one)

As FROM a child, I think you meant, Lennie.

>The unknown anonymous one turns potty mouth.

"Potty mouth"...YOU claiming someone else is potty mouth..?!?!

HAHAHAHAHAHAHAHAHAHAHAHA

Shall we start quoting your OWN liberal use of profanity, Lennie?

>Poor baby. Upset because you can't throw names at others without getting return fire?

LENNIE! How DARE you suggest that someone else suffers from that which you so clearly hold dear...?!?!

>"Manliness" isn't "proven" by hiding behind a handle. [one has to wonder if there is a "handle" there to handle...]

And again Lennie slips into using sexual innuendo for establishing a foothold on self-righteousness. And he is ALWAYS the first to bemoan such by others.

Again, the two-faces of Lennie the Licenseless.

Not very. I didn't laugh at the bean scene in Blazing Saddles either.
However, during 30+ years as a SWL I heard Tim and his AM gang discuss the
following: Boatanchors and their ideosynchrasies, modulation, PA's,
various tubes, antennas, smith charts, rig mods and homebrewing, etc...
They made QRO AM sound like fun. I only do QRP CW. Go figure.

It sure would help if he said that, then. We "old guys" many of whom
are barely older than many of you late bloomers, get tired of hearing
what we
"want" when it bears no relation to fact. It should be pretty plain by
now that what most of us "fear" is seeing the hobby severely dimished.
With the proliferation of personal communications that is probably
inevitable, but seems that many are determined to take it to the limit.

>Who kept calling another "putz" over ten times?

That would be me. But then I didn't make an issue of supposedly being
without guilt over such as YOU have. You bemoan such conduct yet you roll in
it yourself.

>Who kept insulting another by trying to imply a lesser work-career title?

You mean like "Goonery Sahgent" and "Dill Instructor" ...?!?! Or
"Nursie"..?!?!

>Who not only insulted another directly but also his wife and friends?

You mean in the same way you insult me (aforementioned "jackboots, et al")
and my friends...?!?! (Which is just about any licensed Amatuer)...?!?!

Two-faced, Lennie...Two-faced.

>Answer the question, big Stevie. Is amateur radio a "secret" society that
can only be discovered or observed by entering the lodge hall?

The answer to THAT is already known by those who are already licensed.
Now, how about answering any one of the two dozen questions ever put to YOU and
ignored.

>What in the world are you talking about, little Stevie?

I am sure you have no idea.

>You are insulting people you've never met, never worked, know absolutely
nothing about...all for the purpose of trying to insult me.

You do a good job of insulting your self AND your "friends",
Lennie...every time you post your hatred and venom here.

Do you think you can invoke the name of some licensed Hams or your family
in order to somehow vindicate your behaviour and them have them not suffer a
black eye for it?

>> Nope...It's about YOUR lack of experience to discuss Amateur matters
>>from the point of practical experience.
>
>Still trying to ride that tired horse?

It's tired but it's still getting around. Got a license yet? Joined a
local radio club yet? Subscribed to QST, CQ, 73, etc...?!?!

>>YOU hold yourself up as some kind of expert on Amatuer matters and hope
>>the neophytes in this forum will sit up and take notice.
>
>Nope. I don't need to impress anyone.

Good. Then you won't be disappointed when you discover that you impress
no one...OR SHOULD I SAY...You don't impress anyone FAVORABLY...?!?!

>Good grief, lil Stevie, you stop at nothing to vent your bile. By
> continuing to bray "defunct magazine" you insult a number of
> good radio amateurs: Skip Tenney, the late Jim Fisk, Alf Wilson,
> Rich Rosen, Terry Northrup

And now you try to drag them down with you, Lennie. The are/were good
Amatuers...the operative word being "Amateurs".

>Nothing seems sacred to you when it comes to trying to earn message points.

You still haven't posted your "message points" scale, Lennie. Another one
of your "to-do" things that you never seem to do.

>Amateur radio involves communicating by radio. I know radio communications
and have been "in practice" doing so in both commercial and military radio
services.

But in what AMATEUR programs have you any experience...?!?! ARES..?!?!
RACES..?!?!

Who's Field Day did you last participate at?

How many people in Amateur Radio today ARE in Amateur radio because
Lennie the Licenseless got them there..?!?!

>I'm just trying to quash the false belief that OOK CW is the epitome of
communications, so much so that it MUST be tested for a full below-30-MHz
amateur radio license class.

Then you are tilting at windmills and your continued anti-Amateur rhetoric
here is just meanness. The code test is already down to a single 5WPM test for
ALL classes and the present test exists solely to meet international treaty
requirements.

>Quit being a sore, frustrated loser in arguments. You can't cut it there,
can't control yourself. Now go on out and get one of those tranks and calm
down.

I am neither, Lennie. I am able to get on the air right now. Youa re
not. It chaps your hide that we are able to do that, while you are not.

It needn't be that way. You have had 11 years to obtain a license, yet
you refuse to do so as it would be an affront to your "professional"
stature...Heaven forbid that YOU should be the one and only electronics
"professional" that had to sit for the written exam like any other citizen.

You are an ugly, bitter person who is in the waning years of his life and you can't stand it. That you choose to "go out" this way is a sad testimony to your inability to cope with your declining years.

Now..WHO needs the "tranks"...?!?!

So who ever said it could be changed by changing the load in the far
field? Not me! Once it is radiated, it's gone, out of the infleunce of
anything except whatever happens at the source. Turn off the power
switch and see what happens. But you cannot separate the E and H fields.
Of course you can measure them separatel. That doesn't change them, but
if one changes the other does so also, automatically. THAT's Ohm's law.
I sure hope you aren't arguing against that.

Yeah, Right! Take a basically confusing subject, particularly at the start when so many just give up, and expect that any serious numbers of new hams will "have time" to devote to it, when all these protesters "never had timeto learn it" or "it was just too hard, I really wanted a ham radio license, but"--ad naseum, and you really expect any serious numbers of hams to bother. Sure Ed, you surely have it figuted out. The Newington way it it ever was demonstrated.

Oh, Loose Lennie doesn't need to worry about the demise of CW, *HE* will be gone the way of spark long before CW is.

Ed can't you get *anything* right? That isn't what I said or even
close. I said that there will have too few CW operators for it to remain
as a viable communications mode. When only one ham in a thouosand can
work CW that is the way it will be.

If he tells the FCC that CW has no
> value when he files his comments to the inevitable rulemaking procedure, one of
> the nails in the coffin of CW testing in the Amateur Radio Service will be his.

So that is the Newington attitude. I see. (Now don't tell us that it is
ONLY your opinion, you've already said your bosses know you wouldn't say
anything that goes against ARRL policy).

You have repeatedly ignored my repeated statements that I WILL choose a more effective mode when it is available, as U'm sure anyone else would, too. When you assume that anyone with an instant urgent need to send a message gets to choose the method he uses, you show that you intentionally ignore the facts. But we already knew that.

It is revealing that you deliberately choose to ignore the reality that
CW mode is virtually universally present on all HF ham radio equipment.
It is very easy to make it so, at almost no additional cost over
eliminating the capability. Only the lack of training and skill by hams
will prevent the use of CW. Consideraing that there *will* be occasions
when communications can depend That speaks volumes about the character
and worth of many hsms who would rather be completely out of business
rather than learn to use it.

Which means that CW does not have enough merits to compete successfully with the non-subsidized modes. That's what you are saying, Dick, whether you realize it or not - that CW does not have enough merits to continue to exist as a useful mode and most hams won't choose to learn Morse code because the return on investment is too small. I think you are wrong about that, BTW.

DOS Tip, Your Ingnorance: This is "rec.radio.AMATEUR.policy".....

>You really should try to keep up with the times.

You should get an Amateur license and get on the air and see what "grown up" is all about.

You MIGHT have some fun along the way, but I doubt it.

>DOS Tip #2: "International treaties" (Robeson's name) on civil radio are changeable at World Radio Conferences by vote of the representative administrations...(SNIP)

No Screaming Eagle DooDoo, huh Lennie...?!?! I ahve never stated that in here...?!?!?!

>Let's skip the virtual expiration of a GROL that was originally a
>First Class Commercial Radiotelephone license since lil Stevie
>never had either one.

I had a Second Phone, once...obtained to accelerate a promotion in the Corps. Didn't need it..let it expire after I got promoted.

Didn't make me King Of the Hill, either.

And yes, Lennie..we will "skip" your silly and embarrasssing episode of your "expiring" GROL. You did look pretty foolish. Still do, but that's besides the point.

>Now, lil Stevie, just why is anyone's income such a "needed" topic about amateur radio?

Since YOU brought it up, Lennie, suppose you expalin to me and the others here why you felt compelled to mention it...No one else has...

>Do you drool over having a Yaesu FT-1000 and can't afford one?

No, actually. I am getting a new ICOM-718. It's NTIA compliant and perfect for my use. And if it get's hit by lightning, I won't cry too profusely in my beer.

>Your problem there, not mine.

Actually, it IS your problem...You'd have a $2500 paperweight while I would have a tranceiver I could use to communicate with other licensed Amatuers.

But I am sure you and your GROL would have fun SWLing. (Remember, Lennie, your GROL states "no station license, no operation.)

>[damn, there's lots and lots of chains...and they are so noisy!

Hearing noises, are you Lennie...?!?! And you state >>I<< need "tranks"...?!?!

Dang-it-all, Lennie...you are making this TOO EASY.

Steve

Len Over 21 wrote:

> DOS Tip #2:

DOS TIP?????? Where's the dinosaur? YOU are it, Pal.

Someone sent me a part of your post where you again deny the existence of a Police Radiotelegraph net. For your information and edification, there existed within the USA between 1936 and 1972 an HF radiotelgraph network of stations that exclusively handled police message traffic, both within various states and through intercommunications and relaying between many states. The state of California was indeed involved in this network, using a radiotelegraph station located at Sacramento which was assigned the callsign KMA25. This station handled interstate police traffic, often with the assistance of relays by the Arizona Highway Patrol station at Flagstaff, KPF46. When conditions permitted traffic was handled direct to states farther to the east. I am personally familiar with the fact that the MSHP station then located in Jefferson City, MO, KAB72, at times was able to communicate directly with KMA25 in Sacramento, although most of the traffic was relayed.
Frequencies used were in the 2.8Mhz, 5.6 mHz and 7.5 mHz regions.

The Jefferson City station, being centrally located, handled heavy volumes of this radiotelegraph traffic going both east and west. There were few stations that were as busy. It was all a part of the Police Communications Network, which did indeed incorporate some wireline teletype. By 1972 the wireline teletype was in universal use and the police radiotelegraph network closed down. I was a part of the technical team that removed all the equipment from the Jefferson City station in 1976.

For a first person account of what it was like to work at one of these CW stations see

http://metronet.com/~nmcewen/police_radio.html

Written by a ham who was also a police CW operator, of course.

And yes, within the state of California police message traffic was handled by teletype. They used their radiotelegraph station strictly for interstate communications. No doubt the larger population within the state justified the added cost.

I have a copy of an APCO (Associated Police Communications Officers) manual that describes this network in considerable detail, including its history.

So your anti-CW ranting fails yet one more time. CHeck your facts a bit more carefully, if you please.

At 12 miles you can tell is that the horizon is curved. It is readily
apparent that it is neither a five sided box, nor a pancake.

Now you want to argue whether the world is flat or not? What next?

I've got three Supertramp albums, and it's not on any of those. Styx
did have a song by that title however. "come sail away, come sail away,
come sail away with me" repeats at the end. Is that the one?

I agree with nearly all your comments except the one above.

If government invests money and wealth is produced, it isn't the govt doing it - it is whoever the money was invested in.

Likewise, the "human capital" in government can not be considered a wealth creator. They are an expense item. Depending on what they are doing, it may be a wise expense or a foolish one, but by no means are they creating wealth.

I realize there is some latitude in our personal definitions of terms, so I don't expect complete agreement. Still, this has been a good discussion. Thanks.

At times like that I think we are living in the alternate reality in which George Bailey was never born. Clarence!

The book which is MUST reading on this subject is "Dave Barry's Book of Bad Songs" in which he documents the genre of bad pop music and its effects on Western civilization. His criteria for a "bad song" are right on the money: it must be a real pop song, meant seriously (not a parody), and must have achieved some level of commercial success. The song must also have the characteristic of being memorable even though you try like mad to forget it.

Example: "MacArthur Park". Big hit, still occasionally heard on the radio. Pretentious and indecipherable, musically inept, yet it made mucho dinero and has been covered many times. Hum a few bars at the job and coworkers will hate you for days because they cannot get the tune out of their heads for hours.

Chapter titles in this wonderful volume include: (this is just a partial list)

"Weenie Music"
"Love Songs"
"Songs Women Really Hate"

Jim bip over to www.publicdebt.treas.govt and you will note that the debt has not gone down in years. And it cannot because any excess of SS collections over receipts will go into a fund which owns bonds which are, guess what, part of the national debt.

What has gone down is the debt in private hands. And when you see the figures, remember that about half a trill is in the Federal Reserve. We did find that paying it off did cause a bind over at Salomon Brothers but this is hardly reason for a tax cut. It is interesting to note how much of the financial system depends on a debt in private hands: odds are the bank carrying your local govt funds must put up Federal Securities, your insuror has a bunch on deposit at the capital to do biz in your state, and so it goes.

At times of high economic activity a national government can and should run surpluses so having a small one in excess of SS net collections is no giant

surprise. What is a surprise is that the Feds blundered into a cut at the right time.

Then they butchered the job by spreading it over ten years complete with sunset clauses. The end result is a guaranteed five-year recession. By 2004, you won't be elected county trash commissioner as a Republican.

Which is what usually comes of parties more interested in idiological purity than governing.

See above:

"the main reason was to point out that making comparisons between the
current tests and those of decades ago is speculation at best and

absurdity at worst."

Read back a few posts and you will see posters claiming they could
pass the tests others took in the past.
>
> If it is so necessary to bring up old tests, why not go back to
> the original 1912 tests for amateurs? :-)

Already been done by KH6O, who is more knowledgeable about that era
than I.

I could pass those tests if required to do so. I don't think you
could, though, Len.
>
> You wouldn't since, like most long-timers of pre-restructuring,
> your tests were "obviously" so much harder than today's tests.

How would you know, Len?

The "difficulty" of tests during the various eras is left to the
opinion of the reader. Since I actually took and passed the tests of
the 1968-1970 era, my opinion of those tests is somewhat informed.

> >>Make those tests available again, and I'm fairly sure

Just responding to Dwight's statement.
>
> The FCC no longer requires 20 WPM morse testing of US
> radio amateurs...for any class.

So? The discussion was about who could past what tests that were given
in the past.

Interesting to see these comments from someone who has not passed ANY
amateur radio tests of any era, including the present one.

Even though you posted on January 19, 2000, that you were going for
the Extra "right out of the box", you haven't done it yet, Len.
Fascinating.

You can only use the modes for which you are equipped, Dick. If,
for whatever reason, someone is not equipped for CW, then he
cannot use CW. If someone is not equipped for PACTOR II, then
he cannot use PACTOR II. It's a simple enough concept. If you
are calling SOS on CW and the only people who can hear you
don't know Morse code, you are using the wrong mode.

I guess first-person observations don't count, huh?

Perhaps if all you can see is the parking lot outside your apartment you would think so.

From any vantage point of altitude (even a few hundred meters..ie: a scenic overlook on a mountain pass) the evidnce is apparent.

Unless, of course, that vision is obscured by mind altering chemicals.

The evidence is not "apparent" to your senses. The evidence is
only apparent because you already know the answer within the
concepts of your mind. I forget the formula for detecting
depth with binocular vision but 2.5 inches of separation is
not enough to detect depth at more than a mile. If the earth
was flat and round, you probably wouldn't be able to tell the
difference by looking at the uneven land with the naked eye.
We take a lot of things for granted that early man, equipped
with the same I/O as we, was incapable of conceiving.

When I flew from Paris to Chicago over Greenland, we were high enough to actually see some curvature. The Earth does not appear to be flat to anyone who has seen it from a distance. The only thing I know of which looks round from any angle, is a sphere.

Are you a Flat Earther or something?

Well Steve seems to dish it out fine, yet when someone comes in a little harder than he people take it as offensive. I think this is exactly what Stagger Lee had in mind. Steve put that info out in public and maybe someone didn't like being called a ANONYMOUS COWARD for failing to use there real name. I mean is it better to be a asshxxx with a name or be a jackarse without one? I think If people respected others wishes for remaining anon they may get the same respect back. I don't agree with people stooping to these levels but who determines how far you take it. Steve at times looks like the school yard bully! Perhaps someone bringing him down a few notches is what we all need.

You probably cannot. Why should CW be able to support such a conversation
when no other mode can either? Ergo, your question is nothing but a
strawman.

Thus "They Can't Answer" becomes "You can't answer either". Come back
when you wish a serious discussion.

With all kinds wishes,

Now, this is interesting. My understanding was one of the best uses
of the excess funds generated when SS purchased the bonds would be to
pay down the national debt; the savings from the interest would offset
the interest due on the bonds when Social Security cashes them in. Do
you agree?

Well, that and I've read that there is a good deal of controversy over
how much economic good a tax cut targetted to the wealthy will do.
For one thing, there are frequently tax increases on the lower
economic brackets to make up the difference; for another, high-dollar
purchases and investments in coin collections don't necessarily spread
benefits around very well.

>myself, thank you.

In government-speak a balanced budget is when the government doesn't have to take on new debt. A surplus is necessary if they plan on ever paying down some of the old debt. Since there hasn't been a surplus since the 50's there is a whole lot of old debt to pay down, and since Fed monetary policy has made the old technique of just waiting for inflation to devalue the debt a lot less effective it might actually require repayment the old fashioned way.

Keynes' notion was that governments should run deficits when the economy was bad, and make it up with surpluses when the economy was good. A lot of people like the deficit part, but the surplus part seems to have mostly been forgotten.

As for who has subscribed to the having one's cake and eating it too principle in recent years, I'd point out that the rate of increase of the national debt during Reagan's 8 years as president matched or exceeded that of the 8 years in the 30's when the New Deal Democrats were spending their way out of the Great Depression. Reagan was a master at getting tax cuts through congress, but his heart wasn't in it when it came to spending cuts. I suspect that Bush will be a chip off the old block. Clinton (and the good economy) already got much of the easy stuff for a Republican to cut, like welfare and other social program spending, along with cuts to the military that Bush would like to reverse. Cuts to most of the big ticket items left would have even congressional Republicans kicking and screaming, so Bush isn't left with a lot of easy options on the spending side to balance the tax cuts. He probably won't.

The choice hence seems to be between "spend and tax" Democrats and "spend and don't tax" Republicans. I'm not very fond of either of them. I don't like paying taxes, but I also don't like the idea that my grandchildren will have to pay for the spending my taxes didn't cover.

As if he was getting a lot of pressure (or even support) from the
Democrats to cut spending. Anybody here believe that?

> The choice hence seems to be between "spend and tax" Democrats and
> "spend and don't tax" Republicans.

You might recollect that the balanced budget wasn't proposed and passed
until the Republicans took over the House in 1993. Clinton and the
Democrats said they wouldn't be able to get it done for another 8 or 9
years. Tax and spend equally was the Republicans idea.

> I'm not very fond of either of

Millions of people we don't even know are spending our childrens
inheritance.

That's a matter of semantics and ideology. If you believe public
needs are being underfunded, then obviously you will have a different
opinion regarding the meaning of a surplus.

Actually, it works out to be faster and easier on CW, once the ops
have a bit of skill.

Here's an example. You are quite familiar with Field Day, of course.

Here's a typical FD QSO on 'phone (HF SSB, good conditions):

"CQ Field Day, CQ Field Day, CQ Field Day, this is W1AW, Whiskey One
Alfa Whiskey, W1AW, go"

"Whiskey One Alfa Whiskey, here is N2EY, November Two Echo Yankee"

"November Two Echo Yankee, here is Whiskey One Alfa Whiskey. Four
Echo, Connecticut, Four Echo Connecticut, go"

"Roger your Four Echo Connecticut, here is Four Alfa eastern
Pennsylvania Four Alfa EPA, this is November Two Echo Yankee"

"Roger your Four Alfa Eastern Pennsylvania, good luck in the contest,
this is Whiskey One Alfa Whiskey calling QRZed Field Day, Whiskey One
Alfa Whiskey, go"

Whew!

Now the same thing in CW:

"CQ FD CQ FD CQ FD DE W1AW W1AW K"

"N2EY"

"N2EY DE W1AW 4E 4E CT CT"

"R 4A 4A EPA EPA DE N2EY"

"R TU FD FD FD DE W1AW"

Same info in both QSOs. Although the 'phone folks talk at 100-150 WPM
or so, the need to phoneticize and repeat back slows them down
enormously. At 20 wpm the whole CW exchange takes less than a minute.
Talking faster doesn't help, either.

When conditions get rough, the repeating and phoneticizing slow down
things on 'phone even more.

Which mode is easier is really a matter of perceived effort. With a good CW rig that has QSK, all the op has to do is wiggle the bug and write in the log.

Bill,

When I can drive an American car, consistently get 100,000+ miles, not be stranded, not have recurring mechanical failures, and get comfortable, all round service, I don't NEED to drive anything else. If it hadn't been for that errant spark plug, I would have over 200,000 miles on that Chevy wagon now. A friend of mine bought a an '86 Chevy Silverado which was a one owner. Beautiful, black, shiny pickup that looked new in and out. The previous owner was a meticulous owner. He only put 300,000 miles on it! The engine and tranny, had been replaced at 271,000--all documented. You're right, I didn't believe it, either until I saw the papers. It is now approaching 360,000 and, to drive it, you would never know it. We loaded it up and took it to a distant ham fest in the spring, and I did the driving (Jim wasn't feeling well but went anyway). I thought I was doing about 60 mph. The truck is so smoothe and quiet (not ONE squeak or rattle), I looked down to find myself gliding along at 85! Good Lord! NOt one hint of age or miles, and it is still going strong. BTW, Jim was a Ford man all his life, er uh, 'til he got his Chevrolet. Seems he has an old-time Mogul engine that he takes to "Threshing Days" shows, and it weighs 5,000 lbs on its tandem trailer. His older Ford truck wouldn't handle the load--burnt out 2 trannies! The Chevy takes it down the road at 65 like it wasn't there.

NOPE! I don't need a Honda, don't want a Honda, and will be driving American till they tell me I am not allowed to drive anymore.

>threat towards Amish? Thats the bully mentality again

It's not a threat, Dan. It's a certainty in a belief system that creeps
like him will get "thier due".

It doesn't take a threat from me. Pond scum like that tend to keep up
thier belligerent attitudes until someone decides that enough is enough.

He'll mouth off to the wrong person IN person some day, and in that moment
he'll remember all the ughly things he did in his life and he will be sorry for
them.

I won't see it, but I have faith in it's certainty.

As for me being a bully..?!?! That's cute. But if saying it makes you
feel better, please, by all means, have at it.

>Daniel

Dan...Daniel or Danette...I don't care.You come in here making assertions
that some people need cutting down, yet we have NO idea who YOU are, what you
are about, or the slightest idea of anything about YOUR character.

THAT is a bully.

>What clarification
>and quantification is needed to participate in this NG, and whom is making
>these rules?

It would seem YOU are, Danny. Your first introduction to this NG is to
support the cowardly snippings of an anonymous poster who took a swipe at me by
using the death of my daughter.

Now...what more do I need to know about Danny Spivey, other than he's
simply spoiling for a fight and little else?

>Do you need a SS# ? Secret Handshake? Secret Decoder ring?

No. Do you have one?

>>Who are you anyway, Dan Spivey?

>Who are you anyway Steve Robeson?

That question has been answered. The first question remains open. Are you
going to answer it, or shall we assume that "Dan Spivey" is a pseudonym you use
to avoid the "Anonymous Coward" label yourself...???

So far, that's how it's looking.

Steve

It's true there's a difference of opinion. But I don't believe that a surplus should be used as an excuse for the government to look for more ways to spend money. It's a spiral effect that must be avoided. The government is the worst money manager I can think of. When did the government become a charity organization? People are supposed to be able to volunteer for that kind of thing.
'I am my brothers keeper' does not mean that I have to be everybodys brothers keeper.

Being a Dave Barry fan, that is one hell of an idea.

I remember one where the lead singer bellowed, "My Baby's real Hot".
To which the back-ups replied, "She ain't worth Doodly Squat"

That will make your day.

A perfect photo of the earth from a distance does not appear
to be flat either but it is. If you don't believe it, look
at the photo on edge.

Obviously, with 2.5 inches of spacing between our eyes, the
earth from a distance appears two dimensional. You cannot
possibly perceive depth from 30,000 ft. What you are doing
is conceiving depth from 30,000 ft. It is concepts that
allow you to view the earth as not flat, not your senses.
You need to be able to think outside the box.

I didn't say the war had "nothing" to do with slavery. I said it had
to do with the bigger picture of economics. Slavery was part of the
economics but slavery certainly wasn't all of the economics.

You are correct, Dick, at least the last time I looked, too. Perhaps Bill meant that there is no pass/fail requirement; one can get all the Q signal questions wrong and still be licensed.

You might be suprised how much I agree with you.

Despite my (evident) socialist reputation, in many cases I don't see
government as the best solution. Furthermore, I don't think we should
tax and spend simply because we can.

My focus is on problems. I see lack of equal economic opportunity as
a problem, both morally and economically, and see sufficiently-funded
public education, some income redistribution and regulation, etc. as
necessary solutions. The same goes for poverty during retirement
(Social Security), the maintenance of a pool of reserve labor
(unemployment and welfare -- remember, the Fed keeps unemployment at a
certain minimum), etc., etc.

Furthermore, it's easy to forget that none of us live in a vacuum, and
that we owe a great deal to our nation for the opportunities and
services we have. It doesn't make a lot of sense to me, therefore, to
complain about having to pay for these things. It's part of the
responsibility of citizenship.

The tax cut was NOT targetted at the wealthy. It was targetted at the
people who were going to pay the taxes in the first place no matter
what their income. You apparently want some people to get an unfair
share of tax money back, i.e. you want something for nothing.

As long as the money gets spent or saved, it doesn't matter to the
overall economy's health who gets it back. The wealthy have lost
billions of dollars in the stock market. Don't you think they have
been punished enough?

I don't recall where Len ever said that he should be given a ham radio license without taking a test. I think he is just saying that he is a professional in electronics and doesn't have to put up with stuff. As long as he doesn't transmit above Part 15 limits on the ham bands, I don't care if he gets licensed or not.

****
Interest on the national debt, the whole debt including that held by the
government itself in the so-called trust funds, is a budget item every year.
The interest in the SS Fund (and the Civil Service retirement system, and
the Airport trust) just compounds away. The major interest savings occur
when some of the Carter Era and later debt in public hands is retired.

We were building -- if one straight lines the previous years -- to a point
at which no debt would have existed in private hands at all in about 8 years
and the only remaining debt would be the uncallable long-term stuff. In
about 11, the expenditures on SS would exceed income and bonds would have to
be sold into a public market that no longer existed.

When a few million horny soldiers come home and crank out kids, the Baby
Boom, some bizzare things are going to happen when they age and the echos of

the boom rattle thru the demographics of the nation for years thereafter. While I think we might have had a bit more candor out of Congress, the Treasury probably had to account for the limited intelligence of Congress as well.

> purchases and investments in coin collections don't necessarily spread
> benefits around very well.

****
A lot depends on conditions and just what it is you hope to accomplish. National income is essentially private consumption plus investment plus government. If the aim is to encourage consumption, then raise the standard deduction. If investment is desired, an investment tax credit plus faster write-offs make sense as do lower personal maximum rates, if all else fails build interstate hiways.

The payroll taxes are in a good number of poor families the only taxes paid. We have moved a large part of the burden on the lower strata and this makes it worse. Of more immediate concern is what is called the 'wedge' which narrowly defined is the difference between an employers cost of wages and what the employee actually gets; a big wedge causes a lot of unemployment. Perhaps the best economic argument for national health coverage is that it would free a lot of people for self-employment as it reduced the wedge for employers. One of the things boomers are going to discover is that no one wants a 55 year-old because of the way health and pension bennies are structured.

My present car is a 2001 Toyota Corolla LE, 5-speed, loaded in every other respect except it doesn't have the sunroof and alloy wheels. It is without a doubt one of the finest automobiles I've ever owned and driven. It was built in Fremont, California at the NUMMI (New United Motor Manufacturing, Inc.) plant, which is a joint venture between Toyota and General Motors. GM sells the same car in a lower trim grade at Chevy dealers, it's called the Chevy Prizm. I've been using my Yaesu FT-2500M
2-meter rig in it with a simple cigarette-lighter plug arrangement for DC power, and a 5/8-wave Larsen NMO antenna on a trunk-lip angle bracket, the kind that screws into the fender inside the trunk opening. Outstanding performance, and no air-bags
popped yet. A fellow club member has a new Toyota Tacoma pickup truck, and he runs a full HF mobile setup using a "screwdriver" antenna. He has not had any problems with his air bags, either.

Nobody at the NUMMI plant -- not the American UAW members on the fabrication and assembly lines, or the Japanese managers and Quality Control experts, had anything to do with Pearl Harbor. Jerry Oxendine is a racist bigot. Keep your steenking Chevies. Everyone I've ever seen has become a piece of rusted junk while Toyotas of the same age and much older keep on providing reliable service.

73 de Larry, K3LT
You asked for it -- you got it! Toyota!!!

Very sage advice here. It's interesting to hear things come back to me that I thought might've been just me. I learned to copy on a keyboard and then found it challenging to do the same on paper. I passed the test and then found the challenge of recognizing a character without a space to "think" about it. I'm sure I could copy a character at 20wpm or more easily but not without that PAUSE to let it register. I'm sure the elmers out there aren't physically "copying" anything and I'll get there some day to recognize words vice characters. Possibly the most interesting of all is the frustration that the more experienced fellas feel when that PAUSE breaks their concentration.
After I've passed the test, now I have to clear hurdle of UN-learning bad habits. If I had the chance to do it again, I think I might start slow with normal character spacing and improve my speed 'til I made 7 1/2 - 10 wpm to take the test.

No smiley? :-) Yes, as yet no one has made a holographic image of the Earth - as far as I know. But there are 3 dimensional images of it that prove it is not flat.

The curvature of the Earth can be seen in a 2 dimentional image.

Okay. Prove that the Earth is flat.

Believe it or not, I probably would have, though it wouldn't have made much sense to. The XYL wouldn't hear of it when I suggested it, though :^) And yes, you're free to believe she's the smarter of us two.

Let me be clear, though: I'm not against tax cuts (or tax increases) on principle. And as I said before, I have a far greater problem with the portion of the tax cut that has yet to be phased in. What we've had thus far has at least provided some benefit to those who need the money.

Finally, I wouldn't blame anyone, of any political persuasion or wealth level, for taking advantage of the tax cut. Individual action won't undo the economic damage, and would only disadvantage those who refuse the money. The policies are what need changing.

Why should CW/Morse be treated any differently from the other modes?
Why should CW/Morse skill be considered as important as everything
else in ham radio combined?

BTW, Larry, guess you didn't hear - the FCC says Morse code skill
has nothing to do with "dumbing-down". All Morse code skill has to do
with is Morse code skill.

"Economic damage" from allowing people to keep more of their
hard-earned money? In the hands of indivuduals, some of that
money is multiplied into additional capital. In the hands of
the government, it is used to shoot down private planes with
missionaries and children in them.

Steve, My character should have no bearing on your tactics employed in this Ng. Your only goal by knowing anything about me is to try and Bully me. Read what I am saying, Dan Spivey means nothing about my character, just as much as I could care less who Steve Robeson is
I cannot see who you are this is a computer.

I agree with the poster that you can say what you want and so can he so don't get hurt feelings about it. were you trying to get a rise from him when you called him a coward?

>
> Now...what more do I need to know about Danny Spivey, other than he's
>simply spoiling for a fight and little else?

Thats what Danny Spivey sees in Steve Robeson, a guy who looks to mix it up with anyone who disagrees with his way of thinking. We don't have to agree Steve, but your name calling because someone prefers to leave there name off a computer Ng is ludicrious at best. But if that how you play the game, don't get mad at those who play. Let me ask you did you try and hurt Stagger Lees feelings by calling him a anonymous coward, was it done to humiliate him, was it done to intimidate him? or any of the others who you have done the same. If the answer is no what do you call it? If yes then Amish guy did the same to you

but a different twist, same result.

You see a lack of opportunity? In this country? Compared to where?
Income redistribution - yikes. That's the Kings job - or the
"Party's".
How 'bout you redistribute your wealth as much as you like, and let
other people worry about redistributing theirs.

> The same goes for poverty during retirement

I'm paying for my own retirement, and I'm paying for my own health
insurance.
And through my contributions to income tax, social secuity, medicare,
and a bunch of others, I'm also paying for other peoples. I pay quite
handsomely in fact. I disagree that I owe more, or even as much as I'm
already paying. Government owes it to me to get more for the money I
already pay them. To me enough is enough. To others, enough is never
enough.

Nope, sure isn't. It's dong the minimum necessary to insure that it is
actually learned rather than some sort of "familiarization" exercise
that would result from being "rolled into" the written.

That one isn't rocket science- it;s because it IS differenc from other modes. One has to actually learn it.

>it doesn't amount to a hill of beans.

Cecil:

That's your opinion and you're entitled to it. However, it's only fair
to tell you that your EE degree and 50 years of experience as a ham
certainly *does* mean something to me! It means I owe you the
respect you deserve for having made these achievements. However,
it does not mean I have to respect your statement that the accomplishments
of one ham over another's don't amount to a hill of beans.

My own accomplishments as a ham are probably farily modest in
comparison to yours, but I am not going to allow some Post-Restructuring
Extra implicitly claim to be my "equal" as a ham merely because his
license class and my own have the same designation. As I've said many
times over the past few years, ham radio is what ham radio operators make
of it, and ham radio operators are what they make of themselves. They
cannot become my "equal" by self-declaration. Moreover, they cannot
become my "equal" merely by having outlived the more comprehensive
and challenging licensing requirements which my peers (Pre-R Extras)
and I have succeeded in meeting.

>

Kim:

For radio amateurs to be prepared to exploit the benefits and advantages
of one of our most practical, effective, efficient and universal modes of
communication is not the least bit "unreasonable." In fact, it is the very
essence of being "reasonable." You say priority is given to voice modes
because it is the "easiest, most commonly available mode." I do not
disagree with that, but the fact that acquiring useful proficiency in a mode
like Morse/CW requires some dedicated effort on the part of a radio
amateur more than justifies the testing requirement, and a licensing
system based on incremental progression in this important skill. The
fact that we have abandoned the licensing requirement (at a level which
facilitates the acquisition of useful proficiency) only serves to indicate
that we, as radio amateurs, are not really serious when we promise to
provide emergency communications capabilities that will get a
message through "When All Else Fails." If we ever, God forbid, get
to the point where "all else" has failed, proficient CW operators will
have one more card up their sleeves, long after the HT slingers and the
Phone jockeys are all played out. It's just a question of whether or
not they'll have anyone to communicate with, if and when that time
does come!

Jim, it isn't possible to issue a complete position paper with each post. Much of my viewpoint has been piecemealed into this NG over a fairly long period of time, as I think you know. I have stated repeatedly here that the problem I saw in the written tests isn't universal, rather the fact that easy access to licenses by people with no real interest in learning the material was something I, as a longtime VE, considered to be a potentially serious problem for the longterm future of the ARS. Ed, in his infinite wisdom, somehow managed to convert that to "You are bashing all newcomers" by stating that they all were fraudulantly licensed, or words to that effect. I don't think it should be too difficult to see why that upset me more than a little.

I also recently downloaded the complete question pool and looked it over and find that indeed, there has been a lot of improvement made over the past couple years, and that is very encouraging. To the point that it looks like my concerns have been pretty well addressed. Ed posted some of the new questions here a couple days age, and indeed this type of question format would be nearly impossible to sccessfully acquire the license without a fair understanding of the material, at least on questions of that type.

Yep. The small portion of people who plaay with horses load them into their trailers and tow them to the countryside with their $40K SUV's lor pickup trucks, unload them and ride awhile, then reverse the process. You really don't call that transportation, I'm sure. Just as CW will not be a communications mode.

And you likely don't know it but the 4wheeler has even largely replaced the horse on the cattle ranch in a lot of places. More control over the ride and less unpredictibility.

How true. I started with the ARRL tapes with very little luck. Then I tried
NU-Morse lite,still not a lot of luck. Then I tried
some other software with out much luck. I wound up learning with the
MFJ Morse code tutor. I was able to anywhere I went, it fits in a shirt
pocket. The code is random. You can set any speed you like.

I shsould have known that you're not a CW op, jsut a ham.So instead of
sending you a bunch of lists you wouldn't know anything about nor
understand, I'll just ZMG.

> >
> > Can you give us some example of communication that is neither English or

> > I don't think I have ever heard them in use on the ham bands.

Ah. So they're out. Of course, tehis is merely a hobby, not a serious
communications effort. I should have had that in mind. Somehow I had
this idea that radio communications when needed for emergencies had some
serious aspect.

> >
> > >ARL numbered radiograms
> >
> > I have never heard them in use outside formal traffic handling, but that
> is an
> > example. Most hams, DX or otherwise, don't use them.

Yep. Lots of things happen in emergencies that are not routine. Every
ARRL log book I ever saw had a list of ARL Numbered Radiograms in the

back. Ever see one? I wonder what they were put there for.

> >
> > >There is another long list of "official" obreviations that are (were)

> >
> > Those abbreviations were abbreviations of English words.

Do you actually think that hams of other languages don't have a list
too?of UNIVERSDALLY RECOGNIZED prosigns, shortened words, speed tips?
Are you really that uninformed on the history of the use of CW as a
traffic handling method?

> >
> > >Additionally,
> > >English

THAT is an *added* benefit, Ed, that foreign CW ops knew would be to
their benefit, whether or not they ever becane fluent in English. Make
note of that if you please, so that you don't get confused about it too
often in the future.

> >
> > >Sorry if many American hams don't know that.
> >
> > And I'm sorry that you don't know that English is a language, Dick.

It is becoming more and more clear that you merely pay lip service to
anyhthing related to the actual use of Morse as a trffic handling
method. I'm not surprised.

You are a fraud, Ed. But you already know that. With the percentage of
no code technicians outnumbering any other class of licensee, the ARS is
already at the point where the use of CW is severely reduced. Add the
large number of 5wpm licensees who just barely made it and will never
again look at a key, and the flushing of CW down the drain looms even
closer.
So pay your lip service and keep up the smiley face, you know the
outcome of this as well as anyone.

I don't know, you are ther why don't you ask someone there? As you
well know, I am one who believes CW does have enough merits to merit
testing for amateur radio operators such as to require them to initially
learn to use it. Evidently you and the rest of Newington just can't see
it. You know as well as anyone that most people who aren't required to
learn it won't, thus will never know beyond anectdotally what it can do.
Tough, but that's the call.

There's no "and" in there, Davie. I am a professional. I don't see
the logical sense in keeping any morse code test for an amateur
radio license when morse code mode is as optional to use as
any other allocated mode. Two separate conditions.

>Since you appear to be the typical geezer in a Lazy Boy, I doubt we'll

If that is what Dickie is saying, then he is only pulling for CW testing on the basis of Him having to test for it, therefore everyone else has to do it. There's no statement supporting viability of morse retention let alone morse testing retention.

>If he tells the FCC that CW has no
>value when he files his comments to the inevitable rulemaking procedure, one

Heh heh, who said I had to? Jimmie M., you are, as you said of another, "full of yourself!" :-)

>You infer what is not there. And you missed the context of the
>discussion.

Hardly. I read four weeks worth of posts in one day, one sitting. The "context" is quite clear that way in comparison to reading daily. :-)

>Read back a few posts and you will see posters claiming they could
>pass the tests others took in the past.

I've read past postings (the last four weeks in one sitting, remember?) and seen a lot of folks claiming they could do any number of things. :-)

>> If it is so necessary to bring up old tests, why not go back to
>> the original 1912 tests for amateurs? :-)

>could, though, Len.

Oooo! A challenge! Why go through the motions? Those
1912 tests don't apply to modern day radio, any radio service.
:-)

>> You wouldn't since, like most long-timers of pre-restructuring,
>> your tests were "obviously" so much harder than today's tests.
>
>How would you know, Len?

Telepathy. The same psychic power that others have claimed
in here for "knowing" what others are thinking, saying, meaning.
:-)

>Even though you posted on January 19, 2000, that you were going for
>the Extra "right out of the box", you haven't done it yet, Len.
>Fascinating.

Jimmie M., now you get your selective editing out of here.
You forgot the big "IF" conditional. :-)

Heh, besides, how do you know I haven't done it already or
have never done it? Telepathy again? :-)

Hee hee...who can deny "first-person accounts by CW operators?"

Dickie C., we've already been through this over two years ago in
here. Way back then I wandered into a local LA police division
(they don't use "precincts" in this city) station and asked for some
public affairs information. I got a lot of interesting information but
not one single item that verified any morse code type CW
telegraphy in use back to 1950. The "telegraphy" was all
teleprinter. It is common to refer to a teleprinter under the
general heading of "telegraphy" even though a teleprinter has
nothing to do with morse code.

1972 was all of 29 years ago, Dickie C. The LAPD were already
experimenting with data terminals in their patrol cars then,
something that is standard today. [you can ask the LAPD
public affairs office if you wish...I posted an 800 number in here
for the LAPD PA office way back when...] Los Angeles is a
big city, over 3.5 million in population, and they have a big
technical center in Center City area (where four were killed
by a laid-off whacko a few years ago, two of the victims being
hams). If there is information available, that is one source
that should be accurate.

I passed through Sacramento, CA, last Saturday, didn't hear
one beep-beep of morse. Big place, lots of communications
going on there but, in 1972, that city was only the hub of
the California Highway Patrol and the urban areas weren't
yet tied together with, not for, the state capitol. :-)

I can believe that 1936 would be a good year to have a CW
net to "tie together police centers," but not by 1970 or even
1960. Ever hear of long-haul microwave radio relay?
Hundreds of voice channels on each microwave relay link.
For that matter, long-haul wired communications was already
in place and working in this state and most others. Are you
going to tell everyone with a straight face that manual CW
was carrying an important part of police communications
even in 1960?!?!?

Now on the military fixed-point to fixed-point networks, I will
not embarass you any further by emphasizing that "telegraphy"
there meant teleprinter, never manual morse from at least
1953 onwards...not on HF, not on troposcatter, not on
satellite relay. When such "traffic" amounts to a million
messages per month total, it is big enough to count.

I'm not "bashing" or "anti" anything except an extraordinary attempt to hold onto the past on the part of others. The Real communications folks use what is faster, more accurate than any morse links. For over a half century that was teleprinter that evolved to faster data modes.

Try living in the present and the future, not the past.

When has amateur emergency communications by any mode
been employed at any time in the last half century?

Is US amateur radio structured to be primarily some kind of
emergency communications system or is it non-professional
radio with a wide scope of activity and primarily for avocational
purposes?

The federal (Part 97) statement about a "pool of trained radio
operators" for national welfare doesn't say anything about
"CW more effective than SSB" or any other mode.

>If maintaining that capability were the real goal, perhaps a rules change
>that
>requires hams to have functioning equipment capable of operating SSB on ALL
>HF
>amateur bands would be more effective.

Why not make it 'every ham on HF has to use CW?' If CW is so
much better than SSB as you say, then CW should be a
mandatory mode should it not?

> If 5 MHz gets added to the Amateur
>spectrum, I think that it will be very rare indeed that any two points within
>the US will not have good propagation on some Amateur frequency.

...except in some NVIS areas. If you postulate "any two points
within the US in contact," then you should strike for LF or VLF
band additions with a full gallon or more output permitted. So far,
nothing has been done in the USA about allocating any amateur
band below MF.

I've said separate things:

1. I am a professional.

2. I want to eliminate the morse code test for an amateur license.

They are not "anded," interlocked or otherwise connected.

Those who attempt countering what I've said about (2) by
connecting it with (1) are doing so deliberately and maliciously.

>As long as he doesn't

But you don't think CW has enough merits that hams will want to
learn to use it without being forced to do so.

I'm not arguing that it is flat. I'm arguing that our perceptions are not adequate to prove that it is not flat. Any other species looking at it would probably perceive it to be flat. Our concepts are what allows us to expand beyond our perceptions.

> The curvature of the Earth can be seen in a 2 dimentional image.

That's a completely riduculous statement, Jim. Back to the 2-D photo. You are "seeing" a dimension that isn't there. Your conceptual mind is filling in the blanks.

> Prove that the Earth is flat.

I didn't say it was flat. We assume it is not flat because people have been all around it and didn't find any edges. But that is a concept not a percept. Without our conceptual brains, our senses are inadequate for proving that the earth is not flat. Ask any chimp or gorilla.

The TV screen is 2-dimensional, Dick, and a 2-dimensional image
proves absolutely nothing. It is our concepts that allow us
to know the earth is a sphere. Our senses indicate otherwise.
We use deductive reasoning to conclude the earth is a sphere.
Although our senses are similar to other species, as far as I
know, we are the only species on earth that has concluded the
earth is a sphere. It's not what you see that matters - it's
what you think.

For radio amateurs to be prepared to exploit *any* particular mode they
must be prepared to use that mode. So what? If any mode is necessary,
the government must require skill, knowledge, and equipment for it
to be effective. Requiring Morse code skill without requiring a CW
transceiver is simply ridiculous and unnecessary. How is someone who
knows Morse code going to send/receive CW without any electronic
equipment? Smoke signals?

Dick, you need to get out more. Horses are everywhere I've lived in Texas and Arizona. The same will be true of CW on the ham bands. CW is such an effective mode that it will not die. That you don't see any merits in the CW mode and must insist upon hams being forced to learn it tells us what you really think about the mode and it's not a pretty sight. It is readily apparent that you feel you will be losing power if the Morse code requirement is dropped. It's the same thing that happened when the slaves were freed and women were granted the right to vote.

Those are not achievements, Larry. The EE degree was a means to an
end, not an end in itself. That's what you are so totally confused
about. A EE degree is worthless unless someone does something with
it. A ham license is worthless unless someone does something with it.

> ... I am not going to allow some Post-Restructuring

How are you going to keep him from doing that, Larry? Shoot him?
Extra licenses are like EE degrees - they are a dime a dozen. What
is important is what is accomplished afterwards.

Source record: 19470

Why should CW be the only mode by which a test measures whether a mode is "actually learned rather than some sort of "familiarization" exercise that would result from being "rolled into" the written"? Why just CW? Don't say it is because of the convenience of the mode. Voice is the *most* convenient.

And one must also learn lots to be able to do almost any other mode than voice. It takes more knowledge to "hook up" for Packet, than to "hook up" for CW. With any mode that uses a computer as an interface--or has that capability--there's lots of wiring, cabling, etc., that must be known to get everything to work and talk together. I daresay if it is technical skill that is the desired end result to be measured via testing, then have someone design, build, and wire an APRS station or a packet station, or a slow scan, etc.

Then, wouldn't you want hams to be mandated to know and have the capability for any and every mode available to them? You've already decried that your not saying CW should be the priority.

Maybe we don't wish to get on your bandwagon, Larry. The only thing I must
to do maintain my license as a radio amateur is abide by the FCC
regulations. Your edict would imply that I also must be prepared to exploit
the benefits and advantages of every practical, effective, efficient and
universal mode of communication. That is pretty damned unreasonable.

>
> In fact, it is the very
> essence of being "reasonable." You say priority is given to voice modes

>

So, it is dedicated effort that you wish to measure? Sorry, that is not a requirement for ham radio. (This is assuming that you believe the only way to be in the "dedicated effort" club is to be a CW op). Your lofty ideals you place upon yourself--and that is all well and good--are not the responsibility of anyone else to fill for themselves.

>
> The
> fact that we have abandoned the licensing requirement (at a level which

>

The knowledge, use, and developed skill of CW does *NOT* mean that we can provide emergency communications capabilities that will get a message through "When All Else Fails," Larry. It only means that we would have CW to attempt it. Your edict also implies that we should know and have the capability for each and every mode we are licensed for.

>
> If we ever, God forbid, get

> 73 de Larry, K3LT
>

Your disparaging opinion of people who have a different passion than you doesn't change the fact, Larry, that to defend the use of CW for emergency communications as some magical "card up their sleeves"(?!!?) is a blatant disregard for the absolute *FACT* that CW, or *ANY* other mode than voice, is probably the least desirable to have available! If the majority of people who walk on this Earth have no capability to decipher (i.e., receive transmission of *and* translate) CW, or packet, or _____(whatever), then the mode I hope and pray I have available is voice--because at wit's end a scream through a microphone indicates distress!

Now, going back to your "dedicated effort" comment. I suspect, Larry, that your passion and favor for CW is more motivated by the fact that you personally feel some superiority through it, than you are concerned for anyone's safety. I suspect that has been the case all along.

No, no, no. I didn't mean to make you think that I don't realize the benefit of CW! I certainly do. What I meant by it is just easier is: it is easier to stay with what I already know than to spend the time learning CW to any proficiency. :)

Nope.

It's where the rig shifts from receive to transmit automatically when the key is down, and from transmit to receive when the key is up. Also referred to as "QSK". Been around since the thirties.

How was it "deservedly so"? You asked why CW (the MODE) should survive. I gave 10 reasons for the MODE to survive. I also disagreed with the idea that the TEST was needed for the MODE to survive.

> Live with it.
>
Why?

>"Horses have all but disappeared?!?" Neigh, neigh, city critter.
>Doan you go 'round sayin thet here in the West... :-)

Your reading comprehension continues to go downhill, Len. The sentence reads: "....have all but disappeared from the nation's roads and highways." A true statement.

Drive Route 40 and you will see many more motor vehicles than horses on the road. The percentage of horses seen on the road will be tiny. Tune the 40 meter amateur band with a decent receiving setup and you will hear plenty of CW signals. The percentage is typically 50% or more.

Live with it.

Well, that *would* work if you were dextrous and the wind was still.
Also flashlights, car horns etc etc etc. But you already know that
virtually every manufactured HF ham rig has CW mode included as a
standard feature, making it present in every ham shack on theplanet with
HF capability. You also know that it will "get through" long after voice
moded are down in the noise. So what's your point? Your headgear?

That "I am a professional" stuff is certain to endear you to those you meet on the ham bands--should you ever pass an exam and obtain an amateur license. Keep hanging on to that viewpoint until others tire of arguing. I note that you are back to the use of the diminuitive in your civil debate.

Third Party! Wow, you may not need that license after all. If you have enough friends who are amateurs, you could simply visit them periodically and have access to the bands. You wouldn't even need to pass a morse exam. You might even be the first guy to work DXCCTP (DXCC Third Party). Hope you're able to save up enough for that Lazy Boy. It pains me to think of a geezer in a windsor chair.

Not true. Morse code has more than "limited potential in
communications"/

> One can exchange RSTs and WX and
> very limited communications of a personal nature using
> morse but anything else requires a lengthy (far longer than
> voice or data) session to exchange information.

Again, not true. Operators with decent skills can converse at
effective speeds close to that of voice radio.

When voice or Morse is used for formal written messages or other data
that needs to be written down by the receiving operator, the limiting
speed is usually the writing speed of the receiving op. Most people
cannot write legibly beyond about 30 or 35 wpm.
>
> The FCC does not declare OOK CW mode as a required

> regulations.

You have it exactly backwards, Len.

The FCC still requires the test only because the international
treaty/regulation requires it.
>
> This is the year 2001, not 1916. There is no Titanic 2 to be

Glad to see that.

> There is
> everything wrong with a government body requiring a test in
> that singular communications skill in order to obtain a
> license when the agency does not specifically require its
> use..

Illogical. It is common for govt. agencies to require tests for things whose use is not mandated.

For example, most driving tests require that the person being tested demonstrate the ability to parallel park, even though there is no requirement to park that way "in real life".

Graduation from high school in most places requires passing grades in all subjects, even though there is no requirement that the subjects be used by the graduate, and many of the subjects are required, not elective. Education standards are set by government bodies.

> Those who wish to use OOK CW and morse code
> can do so optionally without the requirement of testing.

Agreed - and the mode will survive quite well without testing. The advantages of the mode for amateurs just need to be publicized better.
>
> Non-professional (amateur) radio is not a guild or union
> based on an apprentice-journeyman-master ranking.

Nonsense. Practically all human activities, both professional and avocational, involve various status levels. The accomplished, skilled and knowledgeable people in an activity are usually esteemed more than the inexperienced, unskilled and ignorant. In amateur radio, license class is one measure of accomplishment, skill and knowledge. Operating awards, public service experience, and technical developments in amateur radio are other measures.

> The
> requirement of a morse code test is little more than a
> hazing ritual to satisfy long-timers who had to learn it.

Nope. Wrong. Off base. The continued requirement of a morse code test for a license is the direct result of the ITU treaty requirements and nothing else. FCC has said so more than once.
>
> There is no need to "preserve" morse code skill for any
> national reason.

Yes, there is. It's part of the communications heritage. Does that justify mandatory testing? Of course not.

> Real emergency communications use
> non-CW modes.

They also use CW. Does that justify mandatory testing? Of course not.

> The US government, military included,
> does not use OOK CW or morse codings for regular
> communications (sensitive comm is done by enciphered
> data).

The US government, military included, does not use radio for avocational purposes, either. The US government, military included, is

not the model upon which amateur radio should base itself.

>
> When has amateur emergency communications by any mode
> been employed at any time in the last half century?

Less see..

There's the numerous nets coordinated by NOAA during hurricane season.
It was amateur radio that was used extensively after Hurricane Andrew.
Several years ago after the NE was hit by devastating ice storms, it was
amateur radio that helped coordinated repairs and provide needed
communications There are the numerous amateur nets during the recent
fires in the West. There was the amnateur nets used during the midwesy
floods in the early 90's

When the quake hit SF, it was amateur radio that helped get h&w into and
out of the affected areas

Well shit a fire Len..it was in all the papers. OH THAT'S RIGHT. You
don't read papers. If its not on the Sludeg Report, it doesn't happen.

Gee, I guess Len would have known all that. After all, he is the
electronics professional. So this must be his monthgly troll....

Tsk, tsk, Dick, you are pushing a mode that you think nobody wants
to learn. If CW doesn't have enough merits to survive in a free market
of modes, then it doesn't deserve to survive. I believe it will survive
without a federal affirmative action program. I'm sorry you have so
little faith in your favorite mode.

Again, Dick, that is a concept. It is impossible to draw an infinite
number of straight lines. Man, as a conceptual animal, has many
models of reality that may or may not bear any resemblance to
reality. When you lose track of that fact, you lose track of
reality and your model becomes your (possibly invalid) reality.

The point is that if CW/Morse is important enough to require an
affirmative action testing program from the feds then it is
important enough to require that communications equipment also
exist and to require periodic testing to ensure that hams are
still up to par. As it stands now, nothing is ensured by a 5wpm
code test except that a ham once passed a 5wpm code test. It has
turned into nothing more than an initiation ritual.

From: Dick Carroll dixie@townsqr.com

>I shsould have known that you're not a CW op, jsut a ham.

You talking to me, Dick? I am about 99% CW in my operation.

>So instead of sending you a bunch of lists you wouldn't know anything about
nor
>understand, I'll just ZMG.

So instead of sending me or Kim something we won't understand, you will send us
something we won't understand.

Sorry, I have never heard Z codes in use in the Amateur Radio Service. Can you
give me a frequency where I might find some this evening?

>> > I don't think I have ever heard them in use on the ham bands.

>Ah. So they're out.

What do you mean, "out?" If you think that when I say that I have never heard
them on use on the bands that I believe they should not be permitted, or that
they are not useful, you are mistaken.

Let's arrange a secret code between us, Dick, and if I want to say that
something should not be permitted on the bands, instead of saying that I have
never heard it used on the bands, just between you and me, I will say "I do not
think it should be permitted ont he bands."

>Of course, tehis is merely a hobby, not a serious
>communications effort. I should have had that in mind.

If you want to think that Amateur Radio does not have its serious
communications aspects, you are welcome to do so, but I strongly disagree.

> > I have never heard them in use outside formal traffic handling, but that

Yes, often.

> I wonder what they were put there for.

They were put there for use in formal message handling traffic, Dick. To
repeat what I said,I have never heard them in use outside of formal message

handling. If I am wrong, can you give me a frequency where I can hear them in use in areas other than formal mesage handling?

>> > Those abbreviations were abbreviations of English words.

> Do you actually think that hams of other languages don't have a list
>too?of UNIVERSDALLY RECOGNIZED prosigns, shortened words, speed tips?
>Are you really that uninformed on the history of the use of CW as a
>traffic handling method?

What ARE you talking about, Dick. To help keep you on track, my comment was in reference to a thread about whether CW could be used to communicate with people who do not speak each other's language. I just can't see how the fact that people who speak other languages have a "Phillips" code of their own relates to that. Other than the use of Q codes (or their equivalent), can you explain how the fact that people who use other languages can use their Phillips code to communicate with those who do not speak that language. If you think I am misinformed, here is an opportunity for you to teach me.

Did you miss something in the earlier threads, or are you not remembering what the topic of this discussion actually is?

>
>Hitler was legally elected by a democratic plurality.
>Be careful what you wish for.

That "plurality" was 37%, and the opposition among the other 63% was
generally strong. Furthermore, by modern standards, Germany was
hardly a strong democracy at the time, and had little democratic
tradition or culture. Further, their constitution contained a number
of fatal flaws (e.g. Article 48), several members of the government
had little devotion to democracy and were actively plotting to
overthrow it, and don't forget Hitler enjoyed quite a string of luck,
as well.

But even letting the point pass, all I've stated is the general point
that the purpose of legitimate government is to do what society needs
doing as a unit. It's a tool; like any tool, it may be abused. The
prevention of those abuses, of course, is why we have checks and
balances, separation of powers, a strong, proven constitution, etc.

It was a joke, Jim. I was recalling the method I used for switching
from receive on a Hallicrafters S53A to transmit on a Globe Scout
in the early 50s.

Yes, there has been, Dick, and if I can continue to work on it, I would like to see more. I have been only one of many working towards improvements, but some of that improvement is as a direct result of my input to the ARRL team that works on ARRL's submissions to the QPC. That, btw, is the "real" Newington attitude, NOT the one you are trying to convince everybody exists...

Feel bad about telling everybody that I should be using my position at ARRL to effect improvements in the question pools?

>I cannot see who you are this is a computer.

Well, I agree that "Dan Spivey" means nothing here.

As for "Steve Robeson", other than what transpires here, you CAN learn a bit from me from the web. Just as I do about Cecil, Ed, and others. Try qrz.com.

By the way, what's that call, Dan?

>were you trying to get a rise from him when you
>called him a coward?
>
Nope. Trying to get him to be a man and put his name to his comments.

The assertion about the incident in Florida is not germane to the arguments about "security" here.

The "ramming" incident occured when the person being "DF'ed became aware he was a target of the search. It was nothing of the sort of some innocent being stalked. This creep was the radio terrorist. That the guy doing the DFing got dinged by him is a hazard you ahve to expect if you are hunting two-legged foxes.

So for now...nuff said. If you don't want to tell us any moe about you, I have to assume that "Dan Spivey" is a pseudonym an you too are in the Anonymous category. You are not a licensed Ham...not by that name anyway.

Steve

>However,
>it does not mean I have to respect your statement that the accomplishments
>of one ham over another's don't amount to a hill of beans.

Of course one ham's accomplishments can be more than another's. The
accomplishments of passing the tests are certainly noteworthy. But the
accomplishments of most hams who become active are so much more than the one
they achieved when they passed the tests that THOSE are the more important
goals, IMHO>

>My own accomplishments as a ham are probably farily modest in
>comparison to yours, but I am not going to allow some Post-Restructuring
>Extra implicitly claim to be my "equal" as a ham merely because his
>license class and my own have the same designation

I agree; his or her being equal or unequal are not very much related to the
tests you both took. There may be some hope for you, Larry. :-)

>When has amateur emergency communications by any mode
>been employed at any time in the last half century?

Just when I get to the point where I swear to myself that I will try and restrain myself from abrasive adjectives, Lennie, you make a really stupid post. This was an assinine question.

If you were trying to make any other point, you, at the very least, worded it poorly. As for the answer, why don't you ask the FCC? They have not only made several declarations of emergency communications ON the Amatuer bands, they have cited people for violating it.

Seems THEY not only expect but promote those "emergency communications" you claim are not necessary or carried out in the Amateur Service.

Of course, someone with no practical experience or daily exposure to REALITY would know these things.....

>Is US amateur radio structured to be primarily some kind of
>emergency communications system or is it non-professional
>radio with a wide scope of activity and primarily for avocational
>purposes?

Since thefirst paragraph of the FCC's own basis and Purpose of The Amateur Radio Service states "emergency communications", it seems to me that THEY are setting the stage, Lennie.

Maybe you should insist that they rewrite federal code to jive with your jive?

>The federal (Part 97) statement about a "pool of trained radio
>operators" for national welfare doesn't say anything about
>"CW more effective than SSB" or any other mode

Neither does the above comments on emergency communications. YOUR question was : >When has amateur emergency communications by any mode >been employed at any time in the last half century?

The answer is almost every day.

24/7....365....etc etc etc...

And all without YOU!

Steve, K4YZ

the
>> Amateur Radio Service without testing does not even support continued
testing.

> Ed can't you get *anything* right? That isn't what I said or even
>close.

Can I infer, then, tyat you believe that CW will continue to be viable in the Amateur Radio Service without testing?

> I said that there will have too few CW operators for it to remain
>as a viable communications mode. When only one ham in a thouosand can
>work CW that is the way it will be.

If you continue to tell potential CW operators that the mode does not have enough value that no one will want to learn it unless forced to do so to obtain HF priveleges, then you are creating a self-fulfilling prophecy. I am sure you don't intend it that way, but, IMHO, that will be the end result nonetheless.

> So that is the Newington attitude. I see. (Now don't tell us that it is
>ONLY your opinion, you've already said your bosses know you wouldn't say
>anything that goes against ARRL policy).

The current ARRL policy is that ARRL supports the retention of Morse code testing in the US regs to obtain HF access.

From: Dick Carroll dixie@townsqr.com

>You are a fraud, Ed. But you already know that.

Nonsense. I am quite sincere in my belief that because it is almost certain that Morse code testing will go away, that the things being said now in an attempt to retain Morse code testing will make it less likely that future hams will want to learn the mode and give it a try. For the life of me, I can't see why you think it best to say things that tell them that Morse code is not useful enough to survive without a test. Nothing fraudulent there, Dick -- that is exactly what you say.

>So pay your lip service and keep up the smiley face, you know the
>outcome of this as well as anyone.

Yes, we do know the outcome, Dick -- the FCC has pretty much told us that it thinks the ONLY reason to keep Morse code testing is that the treaty requires it. With that in mind, I emphasize the value and utility of Morse code to remind new hams that there is a good reason to learn it. Some of those that believe my words will do so. Unless, of course, they believe your words that I am a fraud and that the mode does not have enough value to be worth learning on its own.

>>and some amateur ding-dongs insist that it must be kept alive
>>so that the amateurs remain "a pool of trained operators for
>>the nation." Not so. There just isn't any need for a "pool of
>>trained CW ops to help the nation."

>Their premise is that CW use within the Aamteur bands will be of national
>value when it handles emergency traffic when conditions on an HF circuit
>deteriorate to the point where SSB is not effective.

And that premise is exactly correct; when CW is used for emergency communications within the Amateur Radio Service under adverse conditions, it does have value. I think Len took that to mean that learning Morse code has value outside of the Amateur Radio Service, as it once did.

Now, am I allowed to note that Len's use of the term "ding dong" was a gratuitous insult, or would that be Poleecing too much?

Amateur licensing causes so much ill will, I think that the ARS should just be abolished. Then the spectrum could be auctioned off and fill the coffers of the US govt. It would be one less thing for y'all to complain about.

Unfortunately, I don't have a frame of reference for the tests like some people here; the only FCC-administered test I ever took was the novice.

From my perspective, though, the current question pools seem pretty thorough.

And a side note: I'll be VE-ing my first test session tomorrow. I'll relate how it goes (approximate pass rate, etc.).

> you might find things a little different.

A category you obviously think you epitomize. In that case, I am SO glad the only place I've run into "Real Hams" has been on this newsgroup.

You go on congratulating yourself on being a "Real Ham", Bruce. At least that's an activity that keeps you out of trouble, since you've shown no interest in improving the situation you constantly decry. And most of the rest of us will simply continue enjoying amateur radio (oh, sorry: "CB-plus", right?).

I thought that scene was a classic, but I'm a Mel Brooks fan from way
back. However, I don't think such a scene belongs on the ham bands.
Neither does the FCC.

> However, during 30+ years as a SWL I heard Tim and his AM gang discuss the
> following: Boatanchors and their ideosynchrasies, modulation, PA's,
> various tubes, antennas, smith charts, rig mods and homebrewing, etc...

I've heard those discussions, and participated in them too.

Oddly enough, Riley is a BA and AM fan, with a nice collection of old
gear. He and the amateur in question actually met at Dayton 2000.
(This was reported in an article in Electric Radio, complete with
picture).

The amateur in question is very knowledgeable from a technical
standpoint, and shares his technical knowledge with the amateur
community. His on-air conduct is another matter, though. Does
technical know-how excuse offensive behavior on the air? I don't think
so.

Some folks argue "free speech" and condemn FCC "censorship". They
argue that since certain words, sounds, jokes or subject matter are
heard on Oprah, Ally McBeal or Howard Stern, they should be allowed on
the ham bands. The FCC sees it differently.

Broadcasters operate on published schedules, so the listening/watching
public can know ahead of time what is on the air, and avoid things
they may find offensive. In addition, broadcasters know in a general
way who is listening and complaining from the ratings services. Their
defense goes something like this: "The ratings say that X million
people watched our show last night, and the FCC got Y complaints about
it. That works out to 1 person in Z complaining." Z is usually a huge
number.

The ham bands are a completely different thing. The questions are these:

Does this sort of on-air behavior help or hurt the ARS?
Would you want tapes of this stuff played to the delegates at a radio conference where the future of amateur frequency allocations are decided?
Would you want prospective hams, particularly young ones and their parents, to hear this stuff?

> They made QRO AM sound like fun. I only do QRP CW. Go figure.

I used to do a bit of AM. Had a decent setup, but some of the behavior I heard on 75 AM was so embarrassing that I don't do it any more. Got rid of the gear and got more CW stuff.

CW is so much nicer that I'm mostly on that mode.

I am not lying. You are. I simply paraphrased your words ("not about slavery") using the words 'nothing to do with slavery'. I intended the phrases to have equivalent meaning. To me, they do. "Not about slavery" tells me you believe that slavery was not an issue in the war, and therefore had nothing to do with the cause. I don't think it's fair for me to be cast as a liar when you did not convey the idea you intended to. Inflamatory exaggerations, which you are prone to make, have a tendancy to do that.

Yes, except for the fact that if it were flat, the horizon would not be
curved - as I've said repeated, and you continue to ignore.

> > The curvature of the Earth can be seen in a 2 dimentional image.

> That's a completely riduculous statement, Jim. Back to the 2-D

No. The only thing that can be discerned from a two dimentional image is
that there IS curvature in at least one dimension.

> > Prove that the Earth is flat.

> are inadequate for proving that the earth is not flat.

We do not rely on our senses to prove that the world is not flat. Nor did I
say we do. Do you still claim that it is not possible to see curvature of
the horizon from space?

Dick,

You were somewhat indignant in your response, and it seemed to me you missed the point being made. Perhaps you read something into it that wasn't there. I tried to explain by way of elaboration. Nothing more than the point in my post was intended. Broad generalizations are made here on a regular basis. They are inaccurate. Good hams, and potentially good hams come into this service every day. Let us not forget that. Okay? Thanks.

We've been over this, Cecil. *Every quality analysis* of the entire
tax cut package shows that the cuts give the wealthiest Americans more
than the share they actually pay, to say nothing of the share they
actually need. Your assersion above is simply false.

See:

Ah, of course. Understood. Thanks for clarifying.

> What I meant by it is just easier is: it is
> easier to stay with what I already know than to spend the time learning CW
> to any proficiency. :)

OK - no problem!

It comes down to whether someone wants to make the "investment" of the
time/effort to develop proficiency in something in order to get the
benefits. Like whether it's worth the time for the two-finger
hunt-and-peck typist to learn touch typing. Or whether it's worthwhile
to learn how to play a musical instrument when one can simply play a
CD or tape.

In my case, the investment in CW has paid off many many times over. On
FD, for example, the "effort" to get half-decent CW skills has
resulted in the "benefits" of lots of QSOs and points.

And that's how the mode needs to be "sold".

--

One reason many new (and not-so-new) hams are perplexed by the code is that they have not seen it in action. Most demos use voice, as do most of the all-too-few depictions of ham radio in the media. When CW is shown, the depictions are often fleeting and/or wildy inaccurate. Many larger hamfests include demo stations showing modes like APRS, PSK31, and even good old AM. Why not a CW demo setup?

> Both my '78 GMC pickup and my 89 Subaru are approaching 200,000 miles.

Lessee - 200,000 on a 23 year old pickup works out to maybe 8700
miles/year....

The mileage on a vehicle isn't always a good indicator. Highway
mileage on good roads is very easy on a car, while stop-and-go city
miles on potholed streets is very rough service.

A better indicator would be hours run, like on aircraft.

100,000 miles of highway driving at an average speed of 50 mph is only
2000 hours. 100,000 miles of city driving at an average speed of 10
mph (lots of time at stoplights) is 10,000 hours. BIG difference.

Another factor is climate.

>> license when the agency does not specifically require its
>> use..
>
>Illogical. It is common for govt. agencies to require tests for things
>whose use is not mandated.

Incorrect. What is illogical is for any government to mandate a test for some activity that is not itself mandated.

The FCC does not mandate that morse code modes be used by radio amateurs over and above any other mode. US amateurs are given the option of using any allocated mode...or not using them.

>For example, most driving tests require that the person being tested
>demonstrate the ability to parallel park, even though there is no
>requirement to park that way "in real life".

Heh heh...try parking diagonally in a parallel-parking area or vice-versa. :-)

>Graduation from high school in most places requires passing grades in
>all subjects, even though there is no requirement that the subjects be
>used by the graduate, and many of the subjects are required, not
>elective. Education standards are set by government bodies.

That paragraph is mixing avocados and orangutangs. Now write on the blackboard 100 times:

"An amateur radio license test is NOT an academic achievement test."

What's more, the commercial radio operator license tests are not academic achievement tests.

High school graduation tests ARE academic achievement tests. There's a big big difference, not only in accreditation but in who sets the standards, format, content, and recognition. If you go into the academic testing (which is not a relevant subject for

this newsgroup) you will find that transferrence of "credits" and
academic achievements in one place is not automatic nor are
the test subjects common or even standardized. Between the
many many different academic accreditations is a very complex
interrelated group of different local and state government
agencies AND academic-professional associations operating
in a rather loose "standardization" by voluntary agreement.

The non-academic radio operator testing in the USA is set and
controlled by a single agency, the FCC.

>> Non-professional (amateur) radio is not a guild or union
>> based on an apprentice-journeyman-master ranking.
>
>Nonsense. Practically all human activities, both professional and
>avocational, involve various status levels.

Non-professional (amateur) radio is not a guild or union based
on apprentice-journeyman-master ranking. There is nothing
in the federal regulations for amateur radio that specifically
states "entry level" or "master"...only that different classes
have different privileges. Too many amateurs have come to
believe that amateur radio is a status thing complete with
class-consciousness, discrimination, and everything else that
goes along with the "I am better than you" thinking of those
with a "higher" class license looking down on "lesser" classes.

>> The
>> requirement of a morse code test is little more than a
>> hazing ritual to satisfy long-timers who had to learn it.
>
>Nope. Wrong. Off base.

Yes. Right. Very much ON base.

>The continued requirement of a morse code test
>for a license is the direct result of the ITU treaty requirements and
>nothing else. FCC has said so more than once.

Incorrect. While the FCC has said (in 1990 and 1999) that the
morse code test does not have any validity in determining the
FCC's need for licensing any amateur, the FCC has said nothing
about the "continued requirement" of a morse test. What the
FCC has said (in 1990 and 1999) was that the ITU-R
recommendations require an international morse code test
for any amateur license having operating privileges below
30 MHz. Those who set ITU-R recommendations are member
nation administrative representatives (State Dept., FCC, NTIA
in the USA). Those same adminstrations can change the
recommendations...and do.

>> There is no need to "preserve" morse code skill for any
>> national reason.

>
>Yes, there is. It's part of the communications heritage.

Spark is part of the "amateur communications heritage." It was
the very first transmitter means for radio amateurs. Yet spark
has been outlawed despite this "heritage."

>> Real emergency communications use
>> non-CW modes.
>
>They also use CW. Does that justify mandatory testing? Of course not.

Consult the Part 90 regulation statements and quote appropriate
regulatory language saying that Real emergency communications
use OOK CW or morse codings. REAL emergency
communicators ONCE "worked CW." Times have changed,
even for those with "heritage" complexes in Public Safety
communications.

>The US government, military included, does not use radio for
>avocational purposes, either.

Oh? What is/was MARS? Did MARS procedures forbid
amateur licensees from using MARS facilities for
avocational purposes? In that case, there have been
many, many "illegal" operations by licensed radio amateurs.

See also the voice and data facilities on land and sea for
private communications. It is in place in many installations
and ships today.

>The US government, military included, is
>not the model upon which amateur radio should base itself.

Partly true. US government radio operates by the same radio
physics as does commercial and amateur radio. Everyone
must share the electromagnetic spectrum as allocated by
their governments. Technology transferrence from US
government radio equipment to civilian radio use has been
common, particularly in the late 1940s to 1960s era of
"surplus."

However, in here there have been many, many statements by
amateur licensees that have based their experiences, skills,
and abilities obtained in the military...and using those as
"reasons" for maintenance of certain amateur modes such as
morse code. That is especially true of veterans who achieved
skill in morse code in the military and have tried to promote
its use in avocational civilian radio. [see some lengthy threads
in this newsgroup of three to four years past]

Heh, didn't miss it at all. That statement stood out like a neon sign. I thought it was bragging at first...now I realize it was both bragging and a true statement. :-)

Please point out any other radio communication service that uses morse code as a primary mode.

>> One can exchange RSTs and WX and
>> very limited communications of a personal nature using
>> morse but anything else requires a lengthy (far longer than
>> voice or data) session to exchange information.
>
>Again, not true. Operators with decent skills can converse at
>effective speeds close to that of voice radio.

Tsk, tsk. Untrue and you know know it. "Close to" is a relative term. That last sentence has as much meaning as "If you stand at the sea shore and I stand on a mile-high mountain top, I am closer to the moon than you are."
:-)
My sentence is physically correct but has no real meaning in itself. The same is true of Miccolis' statement quoted above.

I can converse by voice at rates from 180 to 240 WPM and be understood by another English-language understanding, normal hearing ability human. Can the very skilled morse operators reach intelligible rates of 100 WPM?

>When voice or Morse is used for formal written messages or other data
>that needs to be written down by the receiving operator, the limiting
>speed is usually the writing speed of the receiving op. Most people
>cannot write legibly beyond about 30 or 35 wpm.

Really? :-)

Is that why commercial communications shifted over to tele-
printer terminals running at 60 WPM before WW2?
Teleprinters can operate continuously for hours without
making a single mistake. Is that also true of humans?

>> The FCC does not declare OOK CW mode as a required
>> one to be used by any amateur...yet international
>> regulations require testing. That is inconsistent with the
>> regulations.
>
>You have it exactly backwards, Len.

Not at all, Jim. Unless there has been a new R&O in the
last few days, the FCC allows any allocated mode use to
be at the option of individual amateur licensees.

Also, unless the ITU-R has acted outside of any WRC, S25.5
still requires adminstrations to make examinees pass an
international morse code test for any amateur radio license
having below-30-MHz privileges.

The inconsistency comes from Part 97 giving the option for
use of any allocated mode...yet the license test for a
below-30-MHz-privilege class requires the passing of a
single mode...there is NO manual operating test element
for all other US amateur modes.

>The FCC still requires the test only because the international
>treaty/regulation requires it.

Not quite right. S25.5 is a recommendation of the ITU-R.
The US administration is honor-bound to adhere to the
ITU-R recommendations. There is NO enforcement body
to "require" any recommendation other than voluntary
adherence to such recommendations.

Japan is a member nation of the ITU. Japan has thousands
of licensees who have obtained amateur privileges below
30 MHz without taking any morse code test.

>> This is the year 2001, not 1916. There is no Titanic 2 to be
>> answered after it has hit an iceberg.
>
>The Titanic sank in 1912.

According to a quote you kept, I wrote "Titanic 2." The suffix "2"
denotes a successor ship. No successor to the original Titanic
has been built (to my knowledge, at least).

Oh, and 1912 was 89 years ago and the most-used transmitter
type in that time was spark (the original Titanic had such a
transmitter). Spark was declared illegal before WW2 began.

Why not bring back spark as a limited RF source? Remember,
spark is the first transmitter in use by the first hams and

heritage must be preserved...

When has CW been used for emergency communications
within the amateur radio service under adverse conditions?

Ed, please, if you want to know "what Len meant," ask Len.

Of course, if you are an accredited telepath, please state
your telepathy license number along with the state issuing
such. Thank you.

>Now, am I allowed to note that Len's use of the term "ding dong" was a
>gratuitous insult, or would that be Poleecing too much?

Only "health poleece." A Hostess Ding Dong tastes good and
makes a good dessert, but it is in the category of "false
nutrition" snack foods. There is an analogy to some already-
licensed amateurs when they state "false (intellectual)
nutrition" statements. :-)

I believe Hume made the same mistake. Your concern would be
appropriate for a direct democracy, but is far less so for a
constitutional republic.

Maybe you don't realize that I'm speaking in generalities.
Government's main (legitimate) purpose is as a tool for group effort.
In the details, of course, most of us value and want to protect
certain individual rights.

If I may butt in --

I know of several post-restructuring HF licensees who are working on more-than-20wpm code speed (including myself). It's kind of like building your own antennas -- you do it because it's a challenge.

Obviously, you are mistaken. We don't want to turn Ham radio
into CB. We want to turn 20th century ham radio into 21st century
ham radio. You, OTOH, seem to want to turn 20th century ham radio
into 19th century ham radio.

But what about Dick's assertion that all post-restructuring hams want
to do is pass the 5wpm test and then completely forget about Morse code?
Are you telling us that he is lying about that? He says that CW/Morse
doesn't have enough merit to make hams want to learn it.

Mr. Miles,

I'm very sorry if I have offended you. I did not relies that cross posting to more than one news group was considered spamming. OR IS IT?

I was simply trying a common sense approach to reach as many people as I could with a one line question.Which by the way was answered by many,both by postings and email.

Again thanks for your unkindly comments. I did ask for any and all.

> curved - as I've said repeated, and you continue to ignore.

I haven't ignored it, Jim. I thought it was obvious to the most casual observer that it could be a flat circle. Actually, it could be just part of a sphere. You can't personally say anything about the part that you can't see. Remember Heinlein's "Fair Witness" (or something like that)? When asked what color a house was, they answered, "The side I can see appears to be white."

> The only thing that can be discerned from a two dimentional image is
> that there IS curvature in at least one dimension.

Sorry, Jim, you cannot have curvature in only one dimension. Curvature requires at least two dimensions but it is not necessary for three dimensions to exist to have curvature. A good picture of the earth from space is taken through a single lens and printed on two-dimensional paper. Our eyes are just not designed to perceive depth at that distance. The curvature of the horizon is an illusion enhanced by our conceptual knowledge of the underlying geometry.

> We do not rely on our senses to prove that the world is not flat.

Exactly correct which was my point all along. Our senses were not designed to handle such a task. Good thing we are able to conceptualize, huh?

Two, of course, but not necessarily three. Something can be round and
flat at the same time. Consider a coffee coaster. Flat certainly doesn't
mean something has corners. The earth *appears* to our senses to be flat
and round just as it did to cave men 50,000 years ago.

Just shows how you can be deceived by democratic liars who figure.
The tax rates on the wealthy are much too high. Why is it fair for
1% of the population to pay 20% of the taxes? If 10% is good enough
for God why isn't it good enough for the feds? This tax reduction
package merely lowers the exorbitant rates already paid by the wealthy
and corrects a small part of that inequity. It it weren't for the wealthy
capitalists in this country, the lower classes wouldn't even have a job
and would be starving. Not to mention the hoards of welfare recipients
who contribute less than absolute zero to the economic health of this
once great nation.

Now all you have to do is convince the hoards of old farts that
"Bend Over, Here It Comes Again!" (BOHICA) may not be the most
logical approach to getting new hams to try CW. I detest creamed
corn. Know why? Because my Mother tried to shove it down my throat
when I was small and weak. Wonder if Dick and Larry have succeeded
in shoving anything down anyone's throat lately? Seems that approach
has gone completely out of style since slavery was abolished and
women obtained the right to vote.

Depends on your definition of "Dumbing Down". If labor-saving
devices are "Dumbing Down" then you should look backward in
time, not forward. When an entire transceiver can be done in
software or put on a chip (except for the finals) it is really
difficult to convince anyone that building an obsolete vacuum
tube rig is much of an accomplishment.

Well, you know what happens when you assume....

If and when S25.5 goes away, how long do you think the USA will have code testing for any class of ham license? I say it will last just as long as it takes FCC to act on the paperwork to eliminate it.

The FCC has said more than once that the ONLY reason code testing is retained is because of S25.5. Do you think they will keep code testing without S25.5? I don't.

All kinds of arguments for code testing have already been presented to the FCC, and all but one have been fopund wanting by the FCC.

Game over. Thank you for playing.

If your Dad had been in the same place at the same time with the same education and skills, but had been black, or female, or both, would the Post Office have hired him back then? I doubt it very much.

>Is it better anywhere else in the world?

You have to define "better". Many other countries have "better" education systems, for example, so their young people enter the wrok force with more skills.

My information is that all of the ships in the task force that went against Pearl Harbor were sunk before the end of the war. I'll see if I can locate a reference.

Remember, the war against the Japanese lasted almost four years, and there were several big naval battles. In addition, US Navy submarines took a tremendous toll of both merchant and capital ships throughout the war.

Although the submarine service consisted of just 3% of the US Navy then, subs sank 52% of the Japanese tonnage lost in WW2.

(My favorite submarine David-and-Goliath story is the sinking of the brand-new supercarrier Taiho by the Albacore, using a single torpedo).

Although Pearl Harbor appeared to be a tremendous Japanese victory at the time, the long view shows that the Japanese messed up the attack bigtime:

- Delays at their embassy and poor planning resulted in the ultimatum to Secretary Hull being delivered after the attack instead of before it

- A third wave attack, which would have wreaked even more damage, was not permitted

- The oil reserves of the entire Pacific fleet, stored aboveground in a tank farm on the hills above Pearl Harbor, were not even targeted.

Yamamoto was right: The sleeping giant was awakened, and boy was he pissed.

I heard on the radio today that the reason the Japanese didn't invade the
US mainland was that they knew a lot of American civilians were armed. :-)

Don't know about black, but when my Dad went to work in the Post Office
in about 1942, the Postmaster was a female. My mother and aunt later worked
in the Post Office and are now drawing retirement from it.

Yep - but the same ARRL policy says that the League will not oppose deleting S25.5 from the ITU treaty.

FCC has said that the ONLY reason they kept the 5 wpm code test was S25.5

So if S25.5 goes, FCC will have no reason to keep even 5 wpm. The ARRL policy will be ignored by the FCC. End of story.

Nope, "a rose by any other name still smells as sweet".
All restructuring did was to allow you and I to ignore
the 20wpm code requirement and upgrade to Extra. Restructuring
was a tempest in a teapot - much ado over nothing - symbolism
over substance - ..., signifying nothing. I can't remember the
... part.

Phil:

OK, what *did* they say about shooting at fleeing suspects? My
guess -- you're not allowed to do it. I can think of at least as many
reasons to shoot a fleeing suspect as I can for not shooting him. For
instance, if the suspect were seen to be armed, it would probably
be a bad idea to let him get away, lest a hostage situation ensue
if he encounters an innocent passer-by. And, of course, if you do
choose to shoot, you always risk missing and causing unintended
collateral damage. Give us a reality check.

Cecil:

Interesting. I have heard NCT whiners say, many times, that the old
licensing requirements "shoved (the Morse code) down their throat."
Funny, but they seem to have no problem shoving a dumbed-down
ARS down the throats of those who disagree.

Ed:

Your pickup is a GMC? Now I know why you call it the "Deathmobile!"
BTW -- your Suburu is just getting out of it's break-in period. It should easily go a half-million.

BTW -- for you "American" car fanatics out there, in the small business I worked for before I got my present job, we put over 600,000 miles on each of three 1996 Plymouth Voyager SE minivans, running an airport shuttle service out of Dover, Delaware making several trips a day to airports such as Philadelphia, Baltimore, Washington (Reagan) National, Dulles, McGuire AFB, and Newark. One van got over 200,000 miles on the original engine/transmission. The others got less, with the trannies usually going at the rate of two per engine. I had always wished we had bought three different vehicles: A Plymouth Voyager, a Ford Windstar, and a Honda (don't recall the model name of their minivan). It would have been interesting to do a direct, side-by side comparison in severe service.

>Those are not achievements, Larry.

Cecil:

An EE degree and 50 years as an active amateur radio operator
are not achievements? Hmmm -- do you mind if everyone else out
there with an EE degree and 50 years as a ham respectfully disagrees
with you?

>The EE degree was a means to an
>end, not an end in itself. That's what you are so totally confused
>about. A EE degree is worthless unless someone does something with
>it. A ham license is worthless unless someone does something with it.

I agree with all of the above. This doesn't change the fact that the
EE degree and the long ham career are, indeed, achievements.

>> ... I am not going to allow some Post-Restructuring
>> Extra (to) implicitly claim to be my "equal" as a ham merely because his
>> license class and my own have the same designation.

Thanks for the edit.

>How are you going to keep him from doing that, Larry? Shoot him?

Why is that my only choice? I had planned to disagree with him should
this claim ever arise in this newsgroup. No firearms required -- just my
trusty keyboard!

>Extra licenses are like EE degrees - they are a dime a dozen. What
>is important is what is accomplished afterwards.

Cecil, please tell the rest of us where we can get a legitimate EE
degree for $0.08333333333! I'm sure this particular school will see
an immediate increase in enrollment applications!

>
>Jimmie M., now you get your selective editing out of here.
>You forgot the big "IF" conditional. :-)

What big "if"? Here's the relevant paragraph:

BEGIN QUOTE:

"I'm going for Amateur Extra "out of the box." Maybe I'll
make it, maybe not. The personal point is irrelevant.
What 99-412 really means is that there is no longer any
time-in-grade "seniority" nor any morsemanship that
indicates "superiority" of those bragextras. That applies
to EVERYONE who wants to try...without all the
artificialities of adhering to standards and practices of
the 1930s held in place by old men trying to relive
their youth by bravado and braggadoccio."

END QUOTE

Where's the big "IF"?

In fact, I'll put your entire post of that date at the end of this post. Show us where the conditional "if" exists.

You said you were going to do it, but you haven't. Actions speak louder than words.
>
>Heh, besides, how do you know I haven't done it already or
>have never done it?

There is only one Leonard H Anderson in the database, and you are not him. QED.

N2EY

>
>Kim W5TIT

Bragging rights were codified in law with the so-called Incentive License plan and firmly cemented with the Vanity Call sub-parts of Part 97. US amateur radio didn't die then...but it CHANGED to make the bragging LEGAL. :-)

Kelly is having a fun time trying to make fun of others less skilled at morse code and a long time-in-grade as an extra. That's a form of bragging, a form of showing "superiority" over others...for the braggist's personal pleasure.

Such bragging does irritate me, yes, but only to a minor degree. What does and has bothered me for years, on and off, is the continual insistence that such qualities ("ham radio is all about CW on HF," and other Morse Myths) somehow "define" amateur radio's "experts." What really happened is that these old-timers managed to get into a position of influence at the ARRL and had the ARRL lobby the FCC to keep those "standards." They did that for years but the newer access to the government via the Internet, the dissemination of rule-change notices through the Internet has bypassed the ARRL. US radio amateurs no longer have to get information second-hand nor do they have to go through (by the League's insistence) their Section Director to "communicate their desires." Everyone, ham or non-ham, can go DIRECT to the FCC. The control of influence/lobbying of the FCC by the ARRL has eroded. This disturbs many who Believe in Big Brother to do the lobbying for them. Tough. The PUBLIC spoke and the FCC listened. 99-412 happened.

I'm going for Amateur Extra "out of the box." Maybe I'll make it, maybe not. The personal point is irrelevant. What 99-412 really means is that there is no longer any time-in-grade "seniority" nor any morsemanship that indicates "superiority" of those bragextras. That applies to EVERYONE who wants to try...without all the artificialities of adhering to standards and practices of the 1930s held in place by old men trying to relive their youth by bravado and braggadoccio.

I'm another "old man," a retired professional in radio-electronics engineering. Some of those tenured old men of US ham radio don't seem to want anyone with practical, professional and academic skill in radio and electronics technology. They seem to fear those who have industry-proven capabilities because that doesn't fit into their standards...or because they are insecure in not really knowing what goes on behind the front-panel of their factory-built equipment. They have difficulty in trying to put down those who know practical theory so they try to make fun of them instead...using their license paper as a "diploma" and their HF CW tenure as some kind of "PhD" or "professorship" of radio. Radio theory is somehow imbued by spending hours working rare DX at high rates, therefore some of those old men are "expert."

:-)

When 99-412 goes into real restructuring in April, it won't change some of those tenured old men of US ham radio. They will be bitter, boastful, and express contempt of newcomers, some of which will have the exact same government-granted rank/status/privilege as all those old men who claimed they "worked" for theirs. Human nature doesn't change. Neither have they.

Len

But slavery was 100% about economics. No other economic issue came
close to slavery in importance. So we can logically conclude that the
Civil war was largely about slavery.

So what did you pay for the privilege of not going to war, where so many lost everything including their lives so that you could have the opportunity to become a digital engineer? It is clear, those "products" are not just of a life but a life indebted to the system and society in which such production by an individual is made possible by the pesonal sacrafice of many others in maintaining that very society and freedom of action and choice.

>
> Are you really telling us that you were saying all of those things you said
> about a question pool you had not even seen?

Your conclusions are your own. No information was dissiminated
regarding wholesale revisions to the methodology of the pool questions,
but clearly considerable change has been made.

> I couldn't imagine how you could have been saying the things you have been
> saying about the current tests.
>

Oh yes you could. I don't make it a practice to regularly download the
pool and check for incremental improvements in the absense of
information indicating that change had been made-which was obvious when
you posted that batch of questions last week. It would be difficult to
discern small but effective changes anyway. Considrable change is
obvious at this point.Clearly there has been some useful reaction to the
verbalizations of people who knew, as I do, just what has been going on
since the inception of he VE system. It does show that the people in
charge of improving the pools are not ambivalent about it.

I will tell you this- My objections regarding the method of posing questions such that one can pass the tests without learning significant amounts of the material is at an end. I would assume you're relatively happy at this announcement, or at least satisfied. I am.

FB, Jim. And I will repeat, my objection to the question pools is
ended, whatever the outcome. I never intended to alienate nor anger
anyone, nor cause anger to come my way, and clearly both happened.
Hopefully it was not for nothing, and at least I can believe that my
objections in some way helped effect change.

It's pretty clear that his ONLY exposure to ham radio is right here.

What I disagree with is that the Civil War was *ALL* about
slavery which was the original assertion. There were a number of
other important economic issues besides slavery. For instance, the
Southerners thought the railroads, owned primarily by the Northerners,
charged too much for transporting cotton. They threatened to ship
their cotton to Europe instead of to the Northern US.

I took a semester long university history course titled, "History
of the Old South", and learned a lot that is not common knowledge.

Anyone is entitled to be wrong, Larry. EE degrees are a dime a dozen
and all 50 years as a ham means is that someone renewed his license.
He may have cheated on his conditional license exam and never have
been on the air. Why would you think that is an achievement?

> >How are you going to keep him from doing that, Larry? Shoot him?

You didn't say you were going to disagree with him. You said you were not
going to allow him to do that. You cannot keep him from doing that with
just a keyboard. So I repeat. How are you going to keep him from doing
that? Shoot him?

The South never had a railway system worthy of the name until J P Morgan built the Southern Railway System out of a few dozen local peanut whistles about the turn of the century. Even afterward, the standard joke (current today only with airplanes) was that when you died in the South, whether you were going to heaven or hell, you would have to change trains in Atlanta.

The Confederacy embargoed cotton shipments to Europe in hopes of attracting British support; the Emancipation Proclamation was designed to allow the British government a way off the hook from demands from their mill owners. When the British mills switched to the short-staple cotton from Egypt the market for the long-staple product went down the crapper, a major reason for agricultural depression after the War.

In broader terms, the question was the survival of plantation agriculture as a way of life.

Dick, Beer Keg

Or is trying to talk through extreme noise and static. Single signal
communicasions get throuigh much better in part due to the reduced
bandwidth which trims off a lot of the noise. SSB voice can't do that.

What, no DPDT knife switch for the antenna?I thought everyone bought
one of those from Allied Radio. (way before Radio Shack came along)
Don't tell me you used separate antennas and transmitted into your
receiver. My old ELmer burned the RF coils out of his Sky Buddy doing
that way back there. I was forewarned.
